About the Book

Modern Technology of Cosmetics

(Colour Cosmetics, Face Cosmetics, Eye Cosmetics, Lipstick, Lip Gloss, Lip Liners, Face Wash, Facial Cleansers, Toners, Moisturizers, Exfoliants, Serums, Face Masks, Sunscreens, Shampoos, Hair Conditioners, Hair Sprays, Hair Colourants, Hair Gels, Toothpaste, Dental Products, Bath Preparations, Nail Cosmetics, Toilet Powders, Sunburn Preparations with Machinery Equipment Details and Factory Layout)

Cosmetics have evolved into an essential component of modern personal care, combining science, technology, innovation, and consumer preferences to deliver products that enhance appearance, promote hygiene, protect the skin and hair, and support overall well-being. The cosmetics manufacturing industry encompasses a broad range of products, including skincare, hair care, colour cosmetics, oral care, bath preparations, nail products, sunscreens, and specialty formulations.

The global cosmetics industry continues to witness strong expansion, driven by increasing consumer awareness, premium product demand, natural and eco-friendly ingredients, personalized beauty solutions, digital commerce, and technological innovation. Growing urbanization, changing lifestyles, and rising disposable incomes have further accelerated the demand for high-performance cosmetic products across domestic and international markets. The sector also offers excellent opportunities for contract manufacturing, private-label production, exports, research and development, and value-added product innovation, making it an attractive manufacturing segment for both established enterprises and emerging businesses.

The worldwide cosmetics market has surpassed **US$400 billion** and is projected to expand at a **compound annual growth rate of over 5%**, supported by sustained demand across skincare, hair

care, oral care, and decorative cosmetics. Skincare accounts for more than one-third of total cosmetic consumption, while the rapid growth of premium beauty products, clean-label formulations, and online retail channels continues to reshape the industry. Increasing demand for sustainable packaging, plant-based ingredients, multifunctional products, and scientifically validated formulations further strengthens long-term opportunities for manufacturers and investors.

Drawing extensively from the scope of this book, readers gain practical knowledge of cosmetic ingredients, formulations, manufacturing processes, production techniques, plant establishment, regulatory requirements, quality control, testing procedures, packaging systems, BIS specifications, process flowcharts, plant layouts, machinery selection, and operational practices. The book covers the manufacture of a comprehensive range of cosmetic products, including face, eye, lip, skincare, hair care, dental, and bath, nail, sunscreen, and toilet preparations, while also addressing quality assurance, safety, environmental considerations, laboratory practices, and modern manufacturing requirements essential for commercial production.

This book serves as a practical reference for entrepreneurs, aspiring entrepreneurs, MSMEs, startups, cosmetic manufacturers, industrial professionals, consultants, engineers, investors, researchers, technical institutions, and students seeking reliable guidance on cosmetic manufacturing technology. Whether establishing a new production facility, expanding an existing manufacturing unit, or enhancing technical expertise, readers will find this volume an informative and valuable resource for understanding the technologies, processes, and business opportunities within the modern cosmetics industry.

Contents

Modern Technology of Cosmetics

(Colour Cosmetics, Face Cosmetics, Eye Cosmetics, Lipstick, Lip Gloss, Lip Liners, Face Wash, Facial Cleansers, Toners, Moisturizers, Exfoliants, Serums, Face Masks, Sunscreens, Shampoos, Hair Conditioners, Hair Sprays, Hair Colourants, Hair Gels, Toothpaste, Dental Products, Bath Preparations, Nail Cosmetics, Toilet Powders, Sunburn Preparations with Machinery Equipment Details and Factory Layout)

Contents
