

Handbook on Bio Gas and Its Applications

Author: NIIR Board
Format: Paperback
ISBN: 8186623825
Code: NI114
Pages: 454
Price: Rs. 975.00 **US\$** 100.00
Publisher: National Institute of Industrial Research
Usually ships within **3** days

Energy from different sources, especially biomass has assumed great importance in development and under developed countries of the world. Most of the energy needed for cooking space heating and lighting etc. in rural area of such countries comes from biomass which have been used since long times. The book contains technology of biogas generation with its applications. This book will be very useful for researchers, consultants, entrepreneurs, institutional libraries, students etc.

Contents

1. Biogas Plants: A Boon For Rural Family
 - Composition of biogas and slurry
 - Composition of slurry
 - Raw materials for biogas generation
 - Types of biogas plants
 - KVIC floating drum type
 - Janata biogas plant
 - Deenbandhu biogas plant
 - Shramik Bandhu biogas plant
 - Selection of size of biogas plant
 - Selection of type of biogas plant
 - Factors to be considered
 - Technical considerations
 - Consideration of Climatological factors
 - Consideration of Geographical factors
 - Economic considerations
 - Utilization of biogas and slurry
 - (a) Utilization of biogas
 - (b) Biogas burners
 - (c) Chapatti burner
 - (d) Biogas lamps

(e) Utilization of slurry as manure

Compostion of slurry

Wet slurry

Dried slurry

Other uses of slurry

In Pisciculture

In Mushroom production

Advantages

Limitations

2. Engineering design of biogas units for developing countries

Design concepts used for floating cover Indian styledigesters

Design concepts used for a Chinese digester

Design concepts used for a bag digester

Items to consider in examining a system

Operational factors

Composition of the organic feed-stock

Retention times

Concentrations of the feed-stocks

Organic loading rate

Degree of mixing

Heating and heat balance

Location of a digester system

Slurry effluents

Construction materials

Sizing of the digester

Size based on health criteria

Size based on production of soil conditioner

Size based on energy

Design example

case 1 : fresh manure and urine

case 2 : manure and concrete pad not collected daily

case 3 : manure on the ground, partially dried

case 4 : using destruction of volatile solids

case 5 : design using ESCAP (Indian) approach

case 5 A : fresh manure and urine

case 5 B : manure from a concrete pad

case 5 C : manure on dirt

Construction costs

Conclusions

3. Engineering Aspects of small-scale biogas plants

Structural demands

Relation between the length and height of the bearing structure

Size of the Digester

Size of gasholder

Gasholder-digester ratio

30 days retention time (RT)

60 days RT

90 days RT

120 days RT

Engineering for extension programs

Concluding remarks

4. An improved plug-flow design for the anaerobic digestion
of dairy cattle waste

Introduction

Methodology

Description of the plant

Mixing and feeding tank

Anaerobic digester

Biogas piping and storage

Digester heating station

Capital costs

Results and discussion

Conclusions

5. A village scale biogas pilot plant study using high rate digester technology

Digester

Insulation of digester and gas-holder

Slurry heating system

Operation of plant and presentation of data

Discussions of results

Conclusions

6. Compost-heated small scale farm digester appropriate for Korean conditions

System design and construction

Biogas generation from pig manure

Results and discussion

Organic material loading conditions

Maintaining high temperature by compost heat

Heat loss comparison

Economic feasibility

7. Structural behaviour and stress conditions of fixed dome

type of biogas units

Base of fermentation tank

Wall of fermentation tank

Dome of gas-holder

Construction technique

Analytical considerations

Structural testing of biogas unit

Concluding remarks

8. Ferrocement gasholder for two 60 M³ diester

Procedures for construction of a 20 M³ gasholder

(1) Construction of the mould

(2) Reinforcement

(3) Plastering

(4) Gas-tightness

(5) Inner-steel structure

Conclusions

9. Simplified anaerobic digesters for animal waste

Batch digester plant Results

Plug flow digester plant Results

Covered lagoon biogas system Results

Continuous expansion digester

Tests on a small electric generator set fuelled by biogas

Results

An economic evaluation of the plants

Conclusions

10. Cold condition biogas

Methodology

Results and discussion

11. Mechanical and electrical power from biogas in developing countries

Engines modification for bio-gas use

Performance of biogas fuelled engines

Main factors limiting use of biogas fuelled engines and prospective solutions

12. Performance of a small diesel engine operating in a dual fuel mode with biogas

Objectives of the research

The test unit

Fuels used

Test procedure

Evaluation of the test results

Discussion of the test results

Power out-put

Exhaust gas temperature and combustion

Specific fuel consumption and fuel savings

Efficiency

Comparison of mixing chamber types

Conclusions and recommendations

13. Methane production from farm wastes

History of application of farm digesters

Post World War II developments

Post 1970 developments

American farm digesters

Technical problem

Economic feasibility of farm waste digestion

Barriers to application of anaerobic digestion to farm wastes

Technical approaches to system improvements

Research needs

14. Optimization of bio-conversion of solid and liquid residues

Technological aspects

1. Parallel operation
2. Series (stages) operation
3. Phased operation

Advantages of phased operation

Fixed film and suspended growth reactors

1. Fixed bed
2. Expanded bed
3. Fluidized bed
4. Anaerobic rotating discs
5. Recycled bed

- A. Contact or recycled flocs
- B. Fluidized flocs or sludge blanket
- C. The digester

Choice of process and reactor type

Micro-organisms

Bio-chemical study of the process

1. Screening of the Electron Transfer proteins and Enzymes
2. Purification Processes.

Bacterial control of the digester through co-factor analysis.

15. Novel process for high-efficiency bio-digestion of particulate feeds

Limitations of conventional anaerobic digestion

Novel process concepts

Phase separation
 High-SRT Digesters
 Two-phase digestion of semi solid feeds
 Studies with CSTR Digesters
 Studies with upflow digesters
 Dominant reactions in first and second stage digesters
 Advantages of two-phase fermentation mode and the upflow digester
 Energetic and economic advantages of two-phase digestion
 Two-phase digestion of solid feeds
 Summary and conclusions
 16. Biogas from organic waste diluted with seawater
 Materials and methods
 The organic waste
 The synthetic seawater
 The Inoculum
 The digestion apparatus
 Experimental procedure
 Analytical procedures
 Methane content
 Results and discussion
 Conclusion
 17. Fuel gas production from organic wastes by low capital cost batch digestion
 Background on "controlled" landfilling
 Process description
 Conventional landfill gas recovery
 Application of enhancement to agricultural residues
 Status of landfills as fuel gas sources in the United States
 18. Biogas production from water Hyacinth (*Eichhornia crassipes*) : Influence of temperature
 Materials and methods
 Fermenter
 Substrate
 Inoculum
 Analytical Methods
 Experimental procedure
 Results and discussion
 19. The toxicity effect of pesticides and herbicides on the anaerobic digestion process
 Materials and methods
 Results and discussions
 Effects of Lindane and DDT on anaerobic digestion of mixtures of cotton stalks and cow-dung.
 Effect of Gesapax and Gesaprime on the anaerobic digestion
 of mixture of water Hyacinth and fresh cow-dung.
 Effect of Gesapax and Gesaprime on the anaerobic digestion
 Of mixture of weeds and fresh cow-dung.
 Conclusion
 20. Biogas production from some organic wastes
 Materials and methods
 Organic wastes
 Geranium flour
 Akalona
 Watermelon residues *Citrullus Vulgaris*
 Starter
 Digestion apparatus
 Analytical procedures

Gas volume
 Methane content of the biogas
 Determinations of total solids
 Experimental
 Results and discussion
 Biogas from geranium flour (gf)
 Biogas production from Akalona (Ak)
 Biogas production from Watermelon residue (WR)
 21. The assessment of Cellulytic activities in anaerobic digesters by the "TextilCouponTechnique"
 The use of the screw-capped tubes
 The crimped-caped-serum tubes
 Results and discussion
 Discussion
 22. Biogas production from antibiotic-contaminated cow manure
 Materials and methods
 Experimental procedure
 Results
 Discussion
 23. Biogas from liquid agro-industrial wastes derived from Banana and Coffee processing
 Results
 24. A simple, rapid and accurate method for determination of Carbon-di-oxide in Biogas
 Background
 Theory
 Material
 Procedure
 Estimation of Methane content
 Validation
 25. Assessment of anaerobically digested slurry as a fertilizer and soil conditioner
 Fertilization effect on effluents on field-grown Wheat in clay soil
 Microbiological and chemical analysis
 Result
 Composition of effluents from bio-gas plants
 Introduction
 Methodology
 Effluents sources
 Detection of phytotoxicity
 Methods of handling effluents
 Fertilization effect of effluents on corn (pot experiment)
 Fertilization effect of effluents on wheat (pot experiment)
 Effect of continuous feeding on effluent composition
 Phytotoxic effect of digester effluent
 Changes in fertilizer value of digester effluents during handlling and storage.
 Effluents as soil conditioner
 Fertilizer value of the digester effluents
 Effect on nutrient uptake
 Yield response to fertilizer application
 Discussion
 26. Repeated application of anaerobically digested slurry and its effect on the yeld and NPK uptake of
 Wheat, Turnips and Onion plants
 Methodology
 Materials
 Experimental
 Chemical analysis

Results and discussion

Effect on the dry matter yield

Wheat plant

Turnip plant

Onion plant

Effect on Nitrogen, Phosphorus and Potassium uptake

27. Biogas manure as a complete fertilizer, feasibility for Egyptian farmers

Composition of bio-gas manure and treatments

Aim and scope of work

Results and discussion

Short term effect of biogas manure

Maize

Wheat

Rice

Broad bean

Cotton

Spinach

Carrots

The residual effect of bio-gas manure

Residual effect of bio-gas manure on Wheat

Residual effect of bio-gas manure on Broad bean

28. Health risks associated with the use of biogas slurry: an introductory note

29. Incidence, persistence and control of parasitic eggs and Cysts in anaerobically digested wastes

Methodology

1. Incidence of Ascaris eggs and Eimeria Oocysts in different village digester.

2. Laboratory-controlled experiments

Aeration of the sludge after 45 days

Results and discussion

1. Incidence of Ascaris eggs and Eimeria Oocysts in different village digester

2. Laboratory-controlled experiments

Conclusion

Incidence, persistence and control of some pathogens during anaerobic digestion of organic wastes

Methodology

Isolation and identification of the pathogens

Results

Isolation of pathogens in samples obtained from different operating village digester.

Persistence and control of pathogens during anaerobic digestion of sludge under laboratory conditions

Discussion

30. Survival of pathogens and parasites during the anaerobic digestion of organic wastes

Methodology

Laboratory digester

Organic wastes

Fermentation experiments

Biogas Analysis

Chemical Analysis

Microbiological determinations

Results and discussion

31. Development and application of biogas technology for rural areas of Egypt

Background and objective

The preliminary fact-finding phase

Outline of the R & D activities

The demonstration phase

Future plans

Conclusions

32. Biogas production from kitchen refuses of army camps of Egypt using a two-phase biogas digester

Materials and methods

Materials fed to the digester

Plant description

Inlet tank

Main digester

Gas-holder

Operation of the system

Experimental

Methods of analysis

Methane content in the biogas

CO₂ content

Results and discussion

1. Heating

2. Mixing

33. An integrated renewable energy system project overview

Project objectives

Design considerations

System components

Operation concept

Technical Data

34. Biogas from biomass for a Kenya farm service center

Biogas production

Fertilizer production

Plans

Digester at the University of Illinois

35. Mectat's experience in the transfer of Biogas technology

Field experience in establishing Biogas digesters

An overview of Bio-gas technology application in rural areas of some countries of the Arab World

Syria

Yemen Arab Republic (YAR)

People's Democratic Republic of Yemen (PDRY)

Tunisia

Lebanon

Conclusion

36. The experience of the development and research of Biogas technology in the rural areas of China

Improvement of Chinese digesters

1. New digester building materials

(I) The semi-plastic digester

(II) The red-mud plastic gas holder digester

III) The iron-made domestic digester

2. Use of solar energy with biogas degesters

(I) The combination of hydraulic digester with solar energy heat-collector

(II) The solar energy feedback heated digester

(III) The solar energy hot-water digester installed with heat-exchanger inside

1. Above ground digesters

2. Insulating devices for the hydraulic digester

(I) Macroscopic economic benefit evaluation²⁴

(II) Analysis by country units

(II) Analysis by production team units

37. The Biogas program in India

Historical background

Recent developments

Future plans

Main considerations, research allocations and future directives

38. Summary of the Nepal Biogas program

Country background

Appropriateness of Biogas program in Nepal

History of Biogas program in Nepal

Organizations involved in Biogas activities

Research and development

Future Biogas programs

39. Biogas technology, development and diffusion the Philippine experience

The first seven years

Research and development activities

Commercialization as a means of diffusion

The economics of Biogas system

Available incentives

Constraints and possibilities

Immediate goals and targets

Summary and conclusion

40. Biogas technology, research, development and diffusion projects in Sri Lanka

Historical aspects

Research and development work

1. Gas yields from various raw materials

2. Development of gas utilizing equipment for rural use

3. Investigation of construction aspects and structural behaviour of fixed dome digester. Development of integrated systems.

Training and extension work

1. Training of persons engaged in agriculture and animal husbandry.

2. Training of technical persons.

Concluding remarks

41. Biogas program of Thailand

The biogas program

Resource investigation and assessment

Need identification

Research and development (R & D)

Demonstration and promotion (D & P)

Promotion and popularization (P & P)

Conclusion

42. Problems concerning biogas production at farm level in Italy

Abstract

Foreward

Problems upstream of process

Problems in the digestion plant

Out put utilization problems

43. Anaerobic digestion in Portugal

Existing or under construction plants Research and development

About NIIR

NIIR Project Consultancy Services (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. Its various services are: Pre-feasibility study, New Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Preparation of Project Profiles and Pre-Investment and Pre-Feasibility Studies, Market Surveys and Studies, Preparation of Techno-Economic Feasibility Reports, Identification and Selection of Plant and Machinery, Manufacturing Process and or Equipment required, General Guidance, Technical and Commercial Counseling for setting up new industrial projects and industry.

NPCS also publishes various technology books, directory, databases, detailed project reports, market survey reports on various industries and profit making business. Besides being used by manufacturers, industrialists and entrepreneurs, our publications are also used by Indian and overseas professionals including project engineers, information services bureau, consultants and consultancy firms as one of the inputs in their research.

NIIR PROJECT CONSULTANCY SERVICES , 106-E, Kamla Nagar, New Delhi-110007, India. **Email:** npcs.india@gmail.com **Website:** NIIR.org
