

Handbook on Bio Gas and Its Applications

Author: NIIR Board

Format: Paperback

ISBN: 8186623825

Code: NI114

Pages: 454

Price: Rs. 975.00 **US\$** 100.00

Publisher: National Institute of Industrial Research

Usually ships within **3** days

Bio Gas typically refers to a gas produced by the biological breakdown of organic matter in the absence of oxygen. Organic waste such as dead plant and animal material, animal dung, and kitchen waste can be converted into a gaseous fuel called Bio Gas. Bio Gas is basically a mixture of methane and carbon dioxide; it originates from biogenic material and is a type of bio fuel. It is a low cost form of energy derived from renewable waste resources: animal manures, agricultural residues, industrial wastewater, human waste and other organic materials. Bio Gas has been used widely as a source of energy and waste treatment, and as liquid fertiliser for soil enhancement, since long time. Digestion the underlying biological process of Bio Gas technology leads to a renewable energy service that ensures a distributed energy production, in which the energy is produced at the point of consumption or demand. A Bio Gas digester, which produces the Bio Gas, also provides an excellent agricultural waste management solution, most notably animal manures. Also, capturing methane generated in a Bio Gas digester has an immensely important role to play with respect to rural energisation, poverty alleviation and development, increased industrial and agricultural efficiency and competitiveness, and improved management of our greenhouse gas emissions. The major applications of Bio Gas are as fertilizer, fuel gas, methane production, mechanical and electrical power production, diesel engine operation, etc. Bio Gas technology is one of the fastest growing renewable energy sectors worldwide, with the annual market growth exceeding 30% each year.

This book majorly deals with Bio Gas plants, raw materials for Bio Gas generation, utilization of Bio Gas and slurry, engineering design of Bio Gas units for developing countries, engineering aspects of small scale Bio Gas plants, a village scale Bio Gas pilot plant study using high rate digester technology, structural behaviour and stress conditions of fixed dome, simplified anaerobic digesters for animal waste, mechanical and electrical power from Bio Gas in developing countries, fuel gas production from organic wastes by low capital cost batch digestion, the toxicity effect of pesticides and herbicides on the anaerobic digestion process, the toxicity effect of pesticides and herbicides on the anaerobic digestion process, Bio Gas manure as a complete fertilizer, feasibility for Egyptian farmers etc.

The book contains technology of Bio Gas generation with its applications. This book will be an invaluable resource for researchers, consultants, entrepreneurs, institutional libraries, students etc.

Contents

1. Biogas Plants: A Boon For Rural Family

Composition of biogas and slurry

Composition of slurry

Raw materials for biogas generation

Types of biogas plants

KVIC floating drum type

Janata biogas plant

Deenbandhu biogas plant

Shramik Bandhu biogas plant

Selection of size of biogas plant

Selection of type of biogas plant

Factors to be considered

Technical considerations

Consideration of Climatological factors

Consideration of Geographical factors

Economic considerations

Utilization of biogas and slurry

(a) Utilization of biogas

(b) Biogas burners

(c) Chapatti burner

(d) Biogas lamps

(e) Utilization of slurry as manure

Composition of slurry

Wet slurry

Dried slurry

Other uses of slurry

In Pisciculture

In Mushroom production

Advantages

Limitations

2. Engineering design of biogas units for developing countries

Design concepts used for floating cover Indian styledigesters

Design concepts used for a Chinese digester

Design concepts used for a bag digester

Items to consider in examining a system

Operational factors

Composition of the organic feed-stock

Retention times

Concentrations of the feed-stocks

Organic loading rate

Degree of mixing

Heating and heat balance

Location of a digester system

Slurry effluents

Construction materials

Sizing of the digester

Size based on health criteria

Size based on production of soil conditioner

Size based on energy

Design example

case 1 : fresh manure and urine

case 2 : manure and concrete pad not collected daily

case 3 : manure on the ground, partially dried

case 4 : using destruction of volatile solids
case 5 : design using ESCAP (Indian) approach
case 5 A : fresh manure and urine
case 5 B : manure from a concrete pad
case 5 C : manure on dirt

Construction costs

Conclusions

3. Engineering Aspects of small-scale biogas plants

Structural demands

Relation between the length and height of the bearing structure

Size of the Digester

Size of gasholder

Gasholder-digester ratio

30 days retention time (RT)

60 days RT

90 days RT

120 days RT

Engineering for extension programs

Concluding remarks

4. An improved plug-flow design for the anaerobic digestion
of dairy cattle waste

Introduction

Methodology

Description of the plant

Mixing and feeding tank

Anaerobic digester

Biogas piping and storage

Digester heating station

Capital costs

Results and discussion

Conclusions

5. A village scale biogas pilot plant study using high rate digester technology

Digester

Insulation of digester and gas-holder

Slurry heating system

Operation of plant and presentation of data

Discussions of results

Conclusions

6. Compost-heated small scale farm digester appropriate for Korean conditions

System design and construction

Biogas generation from pig manure

Results and discussion

Organic material loading conditions

Maintaining high temperature by compost heat

Heat loss comparison

Economic feasibility

7. Structural behaviour and stress conditions of fixed dome
type of biogas units

Base of fermentation tank

Wall of fermentation tank

Dome of gas-holder

Construction technique

Analytical considerations

Structural testing of biogas unit

Concluding remarks

8. Ferrocement gasholder for two 60 M³ diester

Procedures for construction of a 20 M³ gasholder

(1) Construction of the mould

(2) Reinforcement

(3) Plastering

(4) Gas-tightness

(5) Inner-steel structure

Conclusions

9. Simplified anaerobic digesters for animal waste

Batch digester plant Results

Plug flow digester plant Results

Covered lagoon biogas system Results

Continuous expansion digester

Tests on a small electric generator set fuelled by biogas

Results

An economic evaluation of the plants

Conclusions

10. Cold condition biogas

Methodology

Results and discussion

11. Mechanical and electrical power from biogas in developing countries

Engines modification for bio-gas use

Performance of biogas fuelled engines

Main factors limiting use of biogas fuelled engines and prospective solutions

12. Performance of a small diesel engine operating in a dual fuel mode with biogas

Objectives of the research

The test unit

Fuels used

Test procedure

Evaluation of the test results

Discussion of the test results

Power out-put

Exhaust gas temperature and combustion

Specific fuel consumption and fuel savings

Efficiency

Comparison of mixing chamber types

Conclusions and recommendations

13. Methane production from farm wastes

History of application of farm digesters

Post World War II developments

Post 1970 developments

American farm digesters

Technical problem

Economic feasibility of farm waste digestion

Barriers to application of anaerobic digestion to farm wastes

Technical approaches to system improvements

Research needs

14. Optimization of bio-conversion of solid and liquid residues

Technological aspects

1. Parallel operation

2. Series (stages) operation

3. Phased operation

Advantages of phased operation

Fixed film and suspended growth reactors

1. Fixed bed

2. Expanded bed

3. Fluidized bed

4. Anaerobic rotating discs

5. Recycled bed

A. Contact or recycled flocs

B. Fluidized flocs or sludge blanket

C. The digester

Choice of process and reactor type

Micro-organisms

Bio-chemical study of the process

1. Screening of the Electron Transfer proteins and Enzymes

2. Purification Processes.

Bacterial control of the digester through co-factor analysis.

15. Novel process for high-efficiency bio-digestion of particulate feeds

Limitations of conventional anaerobic digestion

Novel process concepts

Phase separation

High-SRT Digesters

Two-phase digestion of semi solid feeds

Studies with CSTR Digesters

Studies with upflow digesters

Dominant reactions in first and second stage digesters

Advantages of two-phase fermentation mode and the upflow digester

Energetic and economic advantages of two-phase digestion

Two-phase digestion of solid feeds

Summary and conclusions

16. Biogas from organic waste diluted with seawater

Materials and methods

The organic waste

The synthetic seawater

The Inoculum

The digestion apparatus

Experimental procedure

Analytical procedures

Methane content

Results and discussion

Conclusion

17. Fuel gas production from organic wastes by low capital cost batch digestion

Background on "controlled" landfilling

Process description

Conventional landfill gas recovery

Application of enhancement to agricultural residues

Status of landfills as fuel gas sources in the United States

18. Biogas production from water Hyacinth (*Eichhornia crassipes*) : Influence of temperature

Materials and methods

Fermenter

Substrate

Inoculum

Analytical Methods

Experimental procedure

Results and discussion

19. The toxicity effect of pesticides and herbicides on the anaerobic digestion process

Materials and methods

Results and discussions

Effects of Lindane and DDT on anaerobic digestion of mixtures of cotton stalks and cow-dung.

Effect of Gesapax and Gesaprime on the anaerobic digestion of mixture of water Hyacinth and fresh cow-dung.

Effect of Gesapax and Gesaprime on the anaerobic digestion Of mixture of weeds and fresh cow-dung.

Conclusion

20. Biogas production from some organic wastes

Materials and methods

Organic wastes

Geranium flour

Akalona

Watermelon residues Citrullus Vulgaris

Starter

Digestion apparatus

Analytical procedures

Gas volume

Methane content of the biogas

Determinations of total solids

Experimental

Results and discussion

Biogas from geranium flour (gf)

Biogas production from Akalona (Ak)

Biogas production from Watermelon residue (WR)

21. The assessment of Cellulytic activities in anaerobic digesters by the "TextilCouponTechnique"

The use of the screw-capped tubes

The crimped-capped-serum tubes

Results and discussion

Discussion

22. Biogas production from antibiotic-contaminated cow manure

Materials and methods

Experimental procedure

Results

Discussion

23. Biogas from liquid agro-industrial wastes derived from Banana and Coffee processing

Results

24. A simple, rapid and accurate method for determination of Carbon-di-oxide in Biogas

Background

Theory

Material

Procedure

Estimation of Methane content

Validation

25. Assessment of anaerobically digested slurry as a fertilizer and soil conditioner

Fertilization effect on effluents on field-grown Wheat in clay soil

Microbiological and chemical analysis

Result

Composition of effluents from bio-gas plants

Introduction
 Methodology
 Effluents sources
 Detection of phytotoxicity
 Methods of handling effluents
 Fertilization effect of effluents on corn (pot experiment)
 Fertilization effect of effluents on wheat (pot experiment)
 Effect of continuous feeding on effluent composition
 Phytotoxic effect of digester effluent
 Changes in fertilizer value of digester effluents during handling and storage.
 Effluents as soil conditioner
 Fertilizer value of the digester effluents
 Effect on nutrient uptake
 Yield response to fertilizer application
 Discussion
 26. Repeated application of anaerobically digested slurry and its effect on the yield and NPK uptake of Wheat, Turnips and Onion plants
 Methodology
 Materials
 Experimental
 Chemical analysis
 Results and discussion
 Effect on the dry matter yield
 Wheat plant
 Turnip plant
 Onion plant
 Effect on Nitrogen, Phosphorus and Potassium uptake
 27. Biogas manure as a complete fertilizer, feasibility for Egyptian farmers
 Composition of bio-gas manure and treatments
 Aim and scope of work
 Results and discussion
 Short term effect of biogas manure
 Maize
 Wheat
 Rice
 Broad bean
 Cotton
 Spinach
 Carrots
 The residual effect of bio-gas manure
 Residual effect of bio-gas manure on Wheat
 Residual effect of bio-gas manure on Broad bean
 28. Health risks associated with the use of biogas slurry: an introductory note
 29. Incidence, persistence and control of parasitic eggs and Cysts in anaerobically digested wastes
 Methodology
 1. Incidence of Ascaris eggs and Eimeria Oocysts in different village digester.
 2. Laboratory-controlled experiments
 Aeration of the sludge after 45 days
 Results and discussion
 1. Incidence of Ascaris eggs and Eimeria Oocysts in different village digester
 2. Laboratory-controlled experiments

Conclusion

Incidence, persistence and control of some pathogens during anaerobic digestion of organic wastes

Methodology

Isolation and identification of the pathogens

Results

Isolation of pathogens in samples obtained from different operating village digester.

Persistence and control of pathogens during anaerobic digestion of sludge under laboratory conditions

Discussion

30. Survival of pathogens and parasites during the anaerobic digestion of organic wastes

Methodology

Laboratory digester

Organic wastes

Fermentation experiments

Biogas Analysis

Chemical Analysis

Microbiological determinations

Results and discussion

31. Development and application of biogas technology for rural areas of Egypt

Background and objective

The preliminary fact-finding phase

Outline of the R & D activities

The demonstration phase

Future plans

Conclusions

32. Biogas production from kitchen refuses of army camps of Egypt using a two-phase biogas digester

Materials and methods

Materials fed to the digester

Plant description

Inlet tank

Main digester

Gas-holder

Operation of the system

Experimental

Methods of analysis

Methane content in the biogas

CO₂ content

Results and discussion

1. Heating

2. Mixing

33. An integrated renewable energy system project overview

Project objectives

Design considerations

System components

Operation concept

Technical Data

34. Biogas from biomass for a Kenya farm service center

Biogas production

Fertilizer production

Plans

Digester at the University of Illinois

35. Mectat's experience in the transfer of Biogas technology

Field experience in establishing Biogas digesters

An overview of Bio-gas technology application in rural areas of some countries of the Arab World

Syria
 Yemen Arab Republic (YAR)
 People's Democratic Republic of Yemen (PDRY)
 Tunisia
 Lebanon
 Conclusion

36. The experience of the development and research of Biogas technology in the rural areas of China
 Improvement of Chinese digesters
 1. New digester building materials
 (I) The semi-plastic digester
 (II) The red-mud plastic gas holder digester
 (III) The iron-made domestic digester
 2. Use of solar energy with biogas digesters
 (I) The combination of hydraulic digester with solar energy heat-collector
 (II) The solar energy feedback heated digester
 (III) The solar energy hot-water digester installed with heat-exchanger inside
 1. Above ground digesters
 2. Insulating devices for the hydraulic digester
 (I) Macroscopic economic benefit evaluation²⁴
 (II) Analysis by country units
 (II) Analysis by production team units

37. The Biogas program in India
 Historical background
 Recent developments
 Future plans
 Main considerations, research allocations and future directives

38. Summary of the Nepal Biogas program
 Country background
 Appropriateness of Biogas program in Nepal
 History of Biogas program in Nepal
 Organizations involved in Biogas activities
 Research and development
 Future Biogas programs

39. Biogas technology, development and diffusion the Philippine experience
 The first seven years
 Research and development activities
 Commercialization as a means of diffusion
 The economics of Biogas system
 Available incentives
 Constraints and possibilities
 Immediate goals and targets
 Summary and conclusion

40. Biogas technology, research, development and diffusion projects in Sri Lanka
 Historical aspects
 Research and development work
 1. Gas yields from various raw materials
 2. Development of gas utilizing equipment for rural use
 3. Investigation of construction aspects and structural behaviour of fixed dome digester. Development of integrated systems.
 Training and extension work
 1. Training of persons engaged in agriculture and animal husbandry.
 2. Training of technical persons.
 Concluding remarks

41. Biogas program of Thailand

The biogas program

Resource investigation and assessment

Need identification

Research and development (R & D)

Demonstration and promotion (D & P)

Promotion and popularization (P & P)

Conclusion

42. Problems concerning biogas production at farm level in Italy

Abstract

Foreward

Problems upstream of process

Problems in the digestion plant

Out put utilization problems

43. Anaerobic digestion in Portugal

Existing or under construction plants Research and development

About NIIR

NIIR PROJECT CONSULTANCY SERVICES (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

Our various services are: Detailed Project Report, Business Plan for Manufacturing Plant, Start-up Ideas, Business Ideas for Entrepreneurs, Start up Business Opportunities, entrepreneurship projects, Successful Business Plan, Industry Trends, Market Research, Manufacturing Process, Machinery, Raw Materials, project report, Cost and Revenue, Pre-feasibility study for Profitable Manufacturing Business, Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Business Opportunities, Investment Opportunities for Most Profitable Business in India, Manufacturing Business Ideas, Preparation of Project Profile, Pre-Investment and Pre-Feasibility Study, Market Research Study, Preparation of Techno-Economic Feasibility Report, Identification and Section of Plant, Process, Equipment, General Guidance, Startup Help, Technical and Commercial Counseling for setting up new industrial project and Most Profitable Small Scale Business.

NPCS also publishes various process technology, technical, reference, self employment and startup books, directory, business and industry database, bankable detailed project report, market research report on various industries, small scale industry and profit making business. Besides being used by manufacturers, industrialists and entrepreneurs, our publications are also used by professionals including project engineers, information services bureau, consultants and project consultancy firms as one of the input in their research.

NIIR PROJECT CONSULTANCY SERVICES , 106-E, Kamla Nagar, New Delhi-110007, India. **Email:** npcs.india@gmail.com **Website:** NIIR.org
