

Plant Biotechnology Handbook

Author: NIIR Board

Format: Paperback

ISBN: 8186623833

Code: NI117

Pages: 550

Price: Rs. 1,100.00 **US\$** 125.00

Publisher: National Institute of Industrial Research

Usually ships within **3** days

Micro propagation is a fast and suitable method for producing large number of similar plants of germless with in a short period. The book contains measurement of plant cell growth, plant tissue culture, initiation of embryo genesis in suspension culture, micro propagation in plants, isolation of plant DNA and many more. This is very helpful book for entrepreneurs, consultants, students, institutions, researchers etc.

Contents

1. The organisms of biotechnology

Cells - The Basic Units

Types of Microorganism

Viruses

Prokaryotes

Eukaryotes

Algae

Protozoa

Fungi

Tissue Cultures

Animal Cells

Plant Cells

2. Transgenic plants

Herbicide Resistant Plants

1. Glyphosate Tolerant Plants

2. Sulphonylurea Tolerant Plants

3. Atrazine Tolerant Plants

4. Phosphinothricin Tolerant Plants

5. Bromoxynil Tolerant Plants

Insect Resistant Plants

1. Transgenic Plants with Bt Toxin

2. Transgenic Plants with Bt Toxin and Serine Protease

Inhibitor Gene

3. Transgenic Plants with Cowpea Trypsin Inhibitor
4. Transgenic Plants with Nicotiana glauca Proteinase Inhibitor

Virus Resistant Plants

1. Transgenic Plants with Viral Coat Protein
2. Transgenic Plants with Viral Nucleoprotein
3. Transgenic Plants with Viral SAT RNA
4. Transgenic Plants with Antisense RNA

Transgenic Plants Resistant to Fungi and Bacteria

Transgenic Plants with Improved Storage Proteins

Sweet Proteins

Enriching the Carbohydrate Contents

Improving the Quality of Oils and Fats

Male Sterility and Fertility Restoration

Changing the Flower Colours

Stress Tolerant Plants

Cold Tolerant Plants

Drought Tolerant Plants

Plant Tolerant to High Light Intensity

Engineering for Preservation of Fruits

Enhancing the Photosynthetic Efficiency

Transgenic Plants as Bioreactors

Vaccines

Interferons

Pharmaceutical Compounds

Biodegradable Plastics

3. Biological Nitrogen fixations

Non-symbiotic Nitrogen Fixation

Features Favourable for Non-symbiotic Nitrogen Fixation

1. Special separation of Nitrogen Fixing Cells
2. Protein-Nitrogenase Association
3. High Rate of Respiration
4. Time specific Nitrogenase Activity
5. Association with Rapid Oxygen Consumers
6. Presence of hydrogenase
7. Colonization

Nitrogenase

Basic requirements for Nitrogen Fixation

Mechanism of Nitrogen Reduction

Assimilation of Ammonia

Route I

Route II

Symbiotic Nitrogen Fixation

Host Specificity

Root Nodulation

Mechanism of Nitrogen Fixation

(a) Oxygen Transport by Leghaemoglobin

(b) Utilization of Oxygen by Hydrogenase

Nitrogenase

Requirement for Nitrogen reduction

Assimilation of Ammonia

4. Genetics of Nitrogen Fixation

Nif-genes of Klebsiella Pneumoniae
 Regulation of Nif Genes
 Nif-genes of Azotobacter
 Nif-genes of Anabaena
 Genetics of Legume-Rhizobium Nitrogen Fixation
 1. Rhizobial Genes
 a) Nod Genes
 b) Nif Genes
 c) Hup Genes
 2. Legume Nodulin Genes
 Leghaemoglobin Gene
 Overall Regulation of Genes
 Gene Transfer for Nitrogen Fixation
 1. Transfer of Nif Genes to Non-Nitrogen Fixing Bacteria
 2. Transfer of Nif Genes to yeasts
 3. Transfer of Nif-Genes to plants
 4. Transfer of Nod Genes
 5. Transfer of Hup Genes
 5. Mycorrhizae for Agriculture and Forestry
 Mycorrhizal types and their structural and nutritional features
 Ectomycorrhizae
 Mechanism of ECM formation
 Morphology and structure
 Synthesis of mycorrhiza
 Cultural study
 Vesicular arbuscular Mycorrhiza
 Introduction
 Evolution
 Taxonomy
 Classification
 Distribution
 Lifecycle
 Reproduction
 Sexual reproduction
 Asexual reproduction
 Method of Inoculum production of VAM
 Some important steps in production of VAM
 Host plant/growth medium
 Fertilizations/micronutrients
 Chemical application
 Control of fungal pathogens
 Plant vesicular arbuscular mycorrhizal fungal interactions
 VAM and soil biota
 Control of root diseases
 Endomycorrhiza fungi and tree diseases
 Mechanism of disease control
 6. Animal and plant cell cultures
 Historical perspectives
 Products and potentials
 Animal cells
 Immunobiologicals
 1. Virus vaccines
 2. Monoclonal antibodies

3. Immunoregulator materials

Insecticides

Enzymes

Hormones

Whole cells

Plant cells

Pharmaceuticals

Food additives

Agrochemicals

Perfumes

Enzymes

Speciality Chemicals

Biomass applications of plant cell cultures

Cell culture and product synthesis

The nature of animal and plant cells in culture

Cell culture initiation

Culture development

Secondary cultures

Culture replication

Industrially useful cell cultures

Substrate independent cultures

Individuality of cell lines in relation to the productivity

Culture media

Growth media

Water

Inorganic salts

Trace elements

Vitamins

Buffers

Sources of energy and carbon

Nitrogen sources

1. Defined nitrogen sources

2. Undefined nitrogen sources

Growth factors

Other ingredients

Maintenance media

Cell culture technologies

Cellular characteristics which influence the choice of cell culture technology

Mixing

Aeration

Doubling times

1. Sterilization of media

2. Sterilization of equipment

Cell stickiness

Immobilized cell systems

The growth and exploitation of cell grown on the surface of a supporting solid substratum

1. Multiple process

2. Unit process

The growth of animal and plant cells immobilized within a confining matrix

1. Gel entrapment systems

2. Applications of entrapped cells

Dynamic cell systems
Air driven systems
Impeller and air driven systems
Impeller mixed systems
7. Somaclonal variation, cell selection and genotype improvement
Somaclonal variation
Historical perspective
The manifold incidence of somaclonal variation
Range of species
Characters displaying variation
Genetic nature of somaclonal variants
Pre-existing or culture induced variation
Genetic and explant sources effects
The origin of somaclonal variation
Chromosomal abnormalities
Molecular possibilities
Gene amplification and diminution
Transposable elements
Cell selection
Disease resistance
Herbicide tolerance
Nutritional quality
Other cell selection systems
8. Virus-free clones through plant tissue culture
Distribution of viruses in plants
Techniques for eradication
Heat treatment
Chemotherapy
Meristem culture
Culture media
Factors affecting developments and rooting
Virus eradication
Major use of virus-free clones
Study effect of virus infection
Source for clonal propagation
Source for in vitro mass propagation
Concluding remarks
9. Microbial metabolism of carbon dioxide
Autotrophic carbon dioxide fixation
The calvin cycle
Molecular structure and properties of RuBP case
Phosphoribulokinase
Carboxysomes
Regulation of ribulose 1,5-biphosphate carboxydase and phosphoribulokinase synthesis
The reductive carboxylic acid cycle
The anaerobic non-phototrophic autotrophs
Heterotrophic carbon dioxide fixation
10. Microbial metabolism of Hydrogen
Introduction
The role of Hydrogen in the biosphere
Enzyme catalysing the evolution and oxidation of Hydrogen
H₂ :+ Ferredoxin Oxidoreductase

H₂ : Ferricytochrome C3 oxidoreductase

H₂ : NAD- Oxidoreductase

H₂ : Coenzyme F420 oxidoreductase

Membrane-bound hydrogenases

Formate hydrogenlyase

Nitrogenase

Organisms involved in the conversion of hydrogen

Hydrogen-producing micro-organisms

Anaerobic conditions

1. Fermentation and fermentative bacteria
2. Anoxygenic photosynthesis and phototrophic bacteria
3. Oxygenic Phototrophic bacteria (Cyanobacteria)
4. Oxygenic green algae

Aerobic conditions : Nitrogen fixing bacteria

Hydrogen consisting organisms

Hydrogen utilization by anaerobes

1. Nitrate-reducing denitrifying bacteria
2. Sulfate reducing bacteria
3. Methanogenic bacteria
4. Acetogenic bacteria
5. Formate-reducing bacteria

Hydrogen utilization by phototrophs

1. Anoxygenic phototrophs
2. Cyan bacteria
3. Green algae

Hydrogen utilization by aerobic hydrogen-oxidizing bacteria

The potential use of Hydrogenases and hydrogen in biotechnology

11. Microbial growth dynamics

Microbial growth in unlimited environments

Basic growth equation from cell number increase

Basic growth equation from increment increase in the population over a small growth time.

Basic growth equations.

Microbial growth in limited environments

Growth limitation by substrate exhaustion

Variation in the observed growth yield

Influence of the growth-limiting substrate on growth rate

Deviation of the Monod equation at High substrate concentrations

Basic growth limiting substrate equation

Modelling microbial growth in limited environments

The logistic equation

The saturation model

Microbial growth in open environments

Chemostat growth kinetics

The dilution rate

The dilution rate and biomass concentration

The dilution rate and growth limiting substrate concentration

Biomass and growth-limiting substrate concentrations in the steady state

Determination of μ_{max} from washout kinetics

Establishing and maintaining the steady state

Deviations from theoretical chemostat kinetics

Influence of variation in the observed growth yield

Microbial competition

Competition in closed environments
 Competition in open environments
 12. Stoichiometry of microbial growth
 Growth yields and material balances
 Relation between ATP production and growth yields, YATP
 Influence of growth rate and maintenance energy on YATP :
 anaerobic chemostat cultures
 Aerobic yield studies and the influence of the efficiency of
 oxidative phosphorylation on growth yields
 Theoretical calculations on the ATP requirements for the formation
 of microbial biomass
 Influence of Cell Composition
 Influence of the carbon source and complexity of the medium
 Theoretical calculations on the ATP requirement for the
 formation of
 microbial biomass
 Influence of the Nitrogen source
 Influence of the carbon assimilation pathway of the growth substrate
 Energy-dissipating mechanisms during growth with excess
 carbon and source.
 Influence of the degree of reduction of the growth substrate
 Heat production
 The stoichiometry of product formation
 13. Ageing and death in microbes
 Basic principles
 Death of microbes
 Ageing of microbes
 Viability among microbes
 Survival of populations : Cryptic growth
 Injury among microbes
 Stress and survival
 The physiological status of the population
 Overt and actual stress
 Starvation
 Substrate accelerated death (SAD)
 Metabolic and structural injury
 Thymine less death
 Survival of slowly growing bacteria
 Differentiation and survival
 14. Effect of environment on microbial activity
 Mechanisms of micro-organisms response to the environment
 Primary response due to direct chemical or physicochemical effects
 Enzyme inhibition and stimulation
 Induction and repression of protein synthesis
 Changes in cell morphology
 Change in genotype
 Dissolved oxygen
 Cell Interactions with oxygen
 Respiration
 Oxygen incorporation
 Oxygen as an inhibitor
 Oxygen as an enzyme regulator
 Measurement of dissolved oxygen

Generalized response to DOT
Diffusion limitation
Response of growing micro-organisms
Respiration rate
Change in cell constituents
Changes in metabolic products
Transient responses to changes in DOT
Control of DOT
Redox potential
Responses to carbon dioxide
Requirement for carbon dioxide
Inhibition by carbon dioxide
Water activity
Introduciton
Halotolerance and halophily
Effects of pH
Introduction
Cellular level responses
Intracellular pH
Effects of pH membrane function
Effects of pH on uptake of substrate
Effects of pH on products of metabolism
Effects of pH on cell morphology an structure
Effects of pH on the chemical environment
Effects of pH on flocculation and adhesion
Optimum pH values for growth
Causes of pH changes in cultures
Product formation
Nutrient uptake
Oxidation/reduction reaction
Chage in buffering capacity
Control of pH
By means of a buffer
By balancing metabolism
By feedback control
Temperature
Cellular-level Responses
Temperature ranges for growth
Response of growth rate to temperature
Effects of temperature on cell death
Effects of temperature on cellular components
1. Membranes
2. DNA
3. RNA
4. Proteins
Cultural effects of temperature
Response to temperature shifts
Effects on substrate utilization
Effects on product formation
Heat generation
Shear
Generation of shear
Effects of shear on filamentous fungi

Effects of shear on protozoa and animal cells in culture

Effects of products on shear rate

General control strategies

15. Biosynthesis of fatty acids and lipids

Nomenclature

Relevance and importance of lipids

Lipid composition of micro-organism

General survey

Bacteria

Yeasts

Fungi

Oleaginous micro-organism

Patterns of lipid accumulation

Factors influencing lipid biosynthesis

Growth rate

Substrate

Temperature

Growth substrate

Oxygen

pH and salinity

Other factors

Lipid biosynthesis

Acetyl- CoA carboxylase

Fatty acid synthetase

Origin of acetyl - CoA

Bacteria

Eukaryotic micro-organism

Biosynthesis of unsaturated fatty acids

Biosynthesis of other fatty acids

Biosynthesis of lipids from fatty acids

Triacylglycerols

Phospholipids

Waxes

Poly β - hydroxybutyrate

Microbial metabolism of alkanes and fatty acids

Alkane-utilizing organisms

Uptake of alkanes

Mechanisms of alkane oxidation

Oxidation of primary alcohols to fatty acids

Metabolism of fatty acids derived from alkanes

β -oxidation

α -oxidation

Microbial products derived from alkanes

Fatty alcohols and aldehydes

Fatty acids

Surfactants

16. Microbial metabolism of aromatic compounds

Fission of the Benzene nucleus

Pereparation of nucleus for aerobic fission

Reactions which follow ring fission

Pathways of degradation

Meta fission pathways

Degradation of 4-hydroxyphenylacetic, homoproto catacleuic

Homogentistic and genetoside acids
Procaeluate 4.5 dioxygenase
Degradation of 3.0- Methylgllic acid: Biological formationof
methanol
Ortho fission pathway
Separation of pathways used for aromatic catabolism by bacteria
Catabolism of aromatic compounds in trichosporon cutaneum
Degradation of aromatic industrials pollutants and pesticides
Complete mineralization
Catabolic plasmids
Release of halogen substrates from benzen nucleus
Incomplete degradation of aromatics
17. Bacterial respiration
The generation of the proton motive force
Bacterial respiratory chains
Respiration linked proton translocation
The proton motive force
The utilization of the proton motive force
ATP synthesis
Active transport of solutes
Biotechnological aspects of bacterial respiration
Biomass production
Waste treatment and metabolite production
18. Mechanisms of enzyme catalysis
The events in an enzyme catalysed reaction
Enzyme mechanisms
Enzyme kinetics
Binding of the substrate to the enzyme
Conformational changes
Covalent bond making and breaking
Glucose isomerase
19. Enzyme evolution
Regulation of metabolism
Induction
Nutritional repression
Feedback regulation
Limiting accumulation of end products
Feedback resistance mutations
Additional types of regulations
Permeability consideration
Recent approaches to strain construction
Amino-acid production by genetically engineered strains of
E-Coli and related organisms
Strain construction in other species
20. Microbial photosynthesis
Historical background
General characteristics of microbial photosynthesis
Structure and synthesis of photosynthetic pigments
Chlorophylls and bacteriochlorophylls
Carotenoids
The phycobissins
The initial reactions primary photochemistry and electron transport
Light harvesting

Charge separation and electron transport in an oxygenic
` photosynthesis
ATP synthesis
The eubacterial photosynthetic microbes
Introduction
The anoxygenic phototrophic bacteria
The major groups
Development of the photosynthetic apparatus
Carbon metabolism
The Cyano bacteria: oxygenic photosynthesis in a diverse
prokaryotic group
Organization of the photosynthetic apparatus
Interrelationship between photosynthetic and
chemosynthetic carbon metabolism in cyanobacteria
21. Extra cellular enzymes
Mechanism of Secretion
Signal hypothesis
Signal hypothesis in bacteria
Signal sequence structure
Function of signal peptide and translocation
Processing of the precursor
Gene fusion studies
Membrane associate intermediates
Alternative export mechanisms; post translocational secretion
Aspects of enzyme secretion in fungi
Regulation of Extracellular enzyme synthesis
Regulation of protein synthesis
Induction of exoenzymes
End-product repression
Catabolite repression
Patterns of exoenzyme synthesis
RNA polymerase modification
Catabolite repression
Translocational control of exoenzyme synthesis in bacteria
Control of secretion
22. Overproduction of microbial metabolites
Effects of nutrient limitation
Effects of pH and uncouplers of oxidative phosphorylation
Effects of Temperature
23. Regulation of metabolite synthesis
A phospholactase system in Klebsiella
Catabolism of unnatural sugars
Regulatory mutations
Modular pathways
Evolution of an aliphatic amidase in pseudomonas
Evolution of a new β -Galactosidase in E-Coli
Properties of the wild-type proteins
Evolution of lactose utilization
Evolution of new activities for ebg enzymes
Evolution of the ebg repressor
Decryptifying Existing Genes

About NIIR

NIIR Project Consultancy Services (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. Its various services are: Pre-feasibility study, New Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Preparation of Project Profiles and Pre-Investment and Pre-Feasibility Studies, Market Surveys and Studies, Preparation of Techno-Economic Feasibility Reports, Identification and Selection of Plant and Machinery, Manufacturing Process and or Equipment required, General Guidance, Technical and Commercial Counseling for setting up new industrial projects and industry.

NPCS also publishes various technology books, directory, databases, detailed project reports, market survey reports on various industries and profit making business. Besides being used by manufacturers, industrialists and entrepreneurs, our publications are also used by Indian and overseas professionals including project engineers, information services bureau, consultants and consultancy firms as one of the input in their research.

NIIR PROJECT CONSULTANCY SERVICES , 106-E, Kamla Nagar, New Delhi-110007, India. **Email:** npcs.india@gmail.com **Website:** NIIR.org
