The forest in India yields a large number of products, which play an important role in the economy of the country. Natural products may be extracted from tissues of terrestrial plants, marine organisms or microorganism fermentation broths. A crude (untreated) extract from any one of these sources typically contains novel, structurally diverse chemical compounds, which the natural environment is a rich source of. There are numerous product which is has a vital commercial applications for example gum karaya, locust bean gum, tamarind gum, rosin and rosin derivatives, turpentine and its derivaties, tall oil and its derivatives, essential oil of deodar, essential oils of cinnamum species and many more. Gum is any of a number of naturally occurring resinous materials in vegetative species. Various essential oils are also obtained from natural resources like deodar, Juniperus recurvar, Suamata, Cinnamum species, agar wood etc. Tall oil products find use in many product applications because of their economy and ready availability. Tall oil is more like a chemical product with a constant and dependable supply and a steady price. It has a large number of applications like; adhesives, carbon paper, cement addition agent, detergents, drawing oils, fungicides, lubricants, soaps, rubber additives, surface coating etc. Phenolic adhesives continue to be the most significant adhesives for the production of weather resistant wood products. In terms of volume of trade, revenue and employment potential, the minor forest products have surpassed the traditional major forest products viz, timber, firewood, pulp, wood etc. Aromatic and medicinal plants are one the major resource from forests; the medicinal plants have been used since ancient times for the treatment of human ailments. Rosin, also called colophony is a solid form of resin obtained from pines and some other plants, mostly conifers, produced by heating fresh liquid resin to vaporize the volatile liquid terpene components. It is semi transparent and varies in color from yellow to black. At room temperature rosin is brittle, but it melts at stove top temperatures. It chiefly consists of different resin acids, especially abietic acid. Oleoresin is a naturally occurring mixture of oil and a resin extracted from various plants, such as pine or balsam fir. Over three quarters of the world population relies mainly on plants and plant extracts for health care. Natural products have evolved to encompass a broad spectrum of chemical and functional diversity. It is this diversity, along with their structural complexity, that enables small natural molecules to target a nearly limitless number of

biological macromolecules and often to do so in a highly selective fashion. Because of these characteristics, natural products have seen great success as therapeutic agents. However, this vast pool of compounds holds much promise beyond the development of future drugs.

This book makes an attempt to provide information of chemical nature, physical properties, manufacturing process, purification, applications, and compatibility of gums, adhesives, oils, rosin & derivatives, resins, oleoresins, katha, chemicals with other natural products. This book contains chapter on rosin and rosin derivatives, esterification of methylolated rosin, turpentine and its derivatives, tall oil and its derivatives, tall oil in liquid soaps, essential oils of cinnamum species, utilization of tannin from waste conicer barks, katha production in Tarai area of Uttar Pradesh, adhesives for wood based on natural polyphenolic substance, etc. This book contains process of forest based products like Gums, Resins, Oleoresins, Essential Oils and other natural products obtained from Indian forests. It gives an insight of richness and vastness of the forest wealth. This book is first of its kind, which covers comprehensive treasure of information on a wide variety of products. This is very resourceful book for students, growers and marketing agencies, country where there is rich flora and fauna awaiting proper exploitation, production and utilization.

CHAPTER 65  
CANDELILLA WAX  
Results and Discussion  
Transplanting and Harvesting  
Yield of Stems and Wax  
Physico Chemical Properties  
Results & Discussion

CHAPTER 66  
CHEMURGY OF KALPVRIKSHA  
Collection  
Transportation  
Drying  
Decortication  
Crushing/Extraction  
Solvent Extraction  
Saponin  
Wet Rendering Process  
Production of Palmitic Acid  
High Pressure Splitting  
Meal  
Seed Coat

CHAPTER 67  
UTILIZATION OF MOHUA FLOWERS FOR  
CITRIC ACID PRODUCTION  
Materials and Methods  
Microorganism  
Growth of the Organism  
Viscosity  
Determination of Sugar  
Determination of Citric Acid: Fermentation Conditions  
Results and Discussion  
Effect of Cultural Conditions of Citrate Production

CHAPTER 68  
INDUSTRIAL UTILIZATION OF KOKAM

CHAPTER 69  
NUTRITIVE VALUE OF SOME LESSER KNOWN  
WILD FRUITS OF JAMMU & KASHMIR STATE  
Availability and Utilization  
Experimental  
Results and Discussion

## CHAPTER 70

### WILD VEGETABLE OOD MATERIALS OF JAMMU AND KASHMIR

Bauhinia Variegata Linn  
Bombax Ceiba Linn  
Capparts Spinosa Linn  
Caralluma Tuberculata N.E. Br.  
Cicer Soongaricum Stapf  
Coccinia Cordifolia  
Codonopsis Ovata Benth  
Corylus Colurna Linn.  
Diplaium Esculentum  
Emblica Officinalis Gaertn.  
Eremurus Spp.  
Euphorbia Royleana Linn.  
Megacarpaea Polyandra Benth.  
Momordica Dioica Roxb.  
Morniga Oleifera Lamk  
Punica Ranatum Linn  
Rheum Spp. R.emodi Wall  
Taraxacum Officinale Weber  
Telosma Pallia Craib. (D.Goalmanda)

## CHAPTER 71

### EDIBLE MUSHROOMS OF JAMMU & KASHMIR FORESTS

Morels (Morchella Sp.)  
Dhingri (Pleurotus)  
Pleurotus Fossulatus (Cooke) Sacc  
Pleurotus Flabellatus (Berk, and Br.) Sacc; Vern  
Other Edible Mushrooms  
Coprinus  
Geopora Arenicola  
Boletus Sp.  
Agrocybe Cylindracea (D.C. ex. Fr) R.maire  
Flammulina Velutipes Curt. Ex. Fr. (Karst): Lactarius  
Scrobiculatus Scop. Ex. Fr.  
Tuber Cibarium Sibth.

## CHAPTER 72

### PROSPECTS OF FURFURAL AND FURFURAL BASED INDUSTRIES IN INDIA

Uses  
Conventional Processes  
Possibilities  
Conclusion

## CHAPTER 73

### KEWDA INDUSTRY IN ORISSA

Distribution Pattern and Availability of the Plant  
Historical Development and Present Set Up of the Industry  
Uses and Demand of the Perfume  
Collection  
Distillation  
Cost Estimation

## Present Position and Future Prospects of the Industry

Raw Materials

Plants Yielding Vegetable Gums and Resins

Bengal Kino Gum or Palash Gum

Sal Gum

Sahanjan Gum

### CHAPTER 76

#### MINOR FOREST PRODUCTS OF BIHAR

### CHAPTER 77

#### INDUSTRIALLY IMPORTANT MINOR FOREST PRODUCTS OF ORISSA

Plants Used in Drug and Pharmaceutical Industry

Plants Used in Perfumery Industry

Vetiveria Zizanioides (Vetiver)

Cymbopogen Flexuosus (Lemongrass)

Hyptis Suavelens (Linn.) Poit

Plants Yielding Gums and Resins of Industrial Use

Plants Used in Vegetable Oil and Fat Industry

Madhuca Latifolia (Roxb)

Pongamia Pinnate (Linn.)

Sehleichera Elesa (Lour)

Plants Used in Food or Food colourant Industries

Bixa Orellana Linn

Plants Used in Leather Tanning Industry

Cleistanthus Collinus (Karade)

Broomgrass for Broom Industry

Kendu for Bidi Manufacturing Industry

Bamboo for Pulp in the Paper Industry

Fibre Yieldig Plants for Cordage Industry
