

Handbook on Rare Earth Metals and Alloys (Properties, Extraction, Preparation and Applications)

Author: NPCS Board of Consultants & Engineers

Format: paperback

Code: NI218

Pages: 688

Price: Rs 1875 | US\$ 150

Publisher: NIIR PROJECT CONSULTANCY SERVICES

Shipping: 5 days

About the Book

Rare earths are essential constituents of more than 100 mineral species and present in many more through substitution. They have a marked geochemical affinity for calcium, titanium, niobium, zirconium, fluoride, phosphate and carbonate ions. Industrially important minerals, which are utilized at present for rare earths production, are essentially three, namely monazite, bastnasite and xenotime. In modern time techniques for exploration of rare earths and yttrium minerals include geologic identification of environments of deposition and surface as well as airborne reconnaissance with magnetometric and radiometric equipment. There are numerous applications of rare earths such as in glass making industry, cracking catalysts, electronic and optoelectronic devices, medical technology, nuclear technology, agriculture, plastic industry etc. Lot of metals and alloys called rare earth are lying in the earth which required to be processed. Some of the important elements extracted from rare earths are uranium, lithium, beryllium, selenium, platinum metals, tantalum, silicon, molybdenum, manganese, chromium, cadmium, titanium, tungsten, zirconium etc. There are different methods involved in production of metals and non metals from rare earths for example; separation, primary crushing, secondary crushing, wet grinding, dry grinding etc. The rare earths are silver, silverywhite, or gray metals; they have a high luster, but tarnish readily in air, have high electrical conductivity. The rare earths share many common properties this makes them difficult to separate or even distinguish from each other. There are very small differences in solubility and complex formation between the rare earths. The rare earth metals naturally occur together in minerals. Rare earths are found with non metals, usually in the 3+ oxidation state. At present all the rare earth resources in India are in the form of placer monazite deposits, which also carry other industrially important minerals like ilmenite, rutile, zircon, sillimanite and garnet.

Some of the fundamentals of the book are commercially important rare earth minerals, exploration for rare earth resources, rare earth resources of the world, some rare earth minerals and their approximate compositions, rare earths in cracking catalysts, rare earth based phosphors, interdependence of applications and production of rare earths, uranium alloys, conversion of ores to lithium chemicals, characterization and analysis of very pure silicon, derivation of molybdenum metal, electroplating and chromizing, electrolytic production of titanium, heat treatment of titanium alloys, tensile properties of alloys etc.

The book covers occurrence of rare earth, resources of the world, production of lithium metals, compounds derived from the metals, chemical properties of beryllium, uses of selenium, derivation of molybdenum metals, ore concentration and treatment and many more. This is a unique book of its kind, which will be a great asset for scientists, researchers, technocrats and entrepreneurs.

Contents

Natural Abundance

Occurrence of Rare Earths

1. Placer Deposits
 2. Vein Type Deposits
 3. Bastnasite Deposits
 4. Ion Adsorption Type Ores
 5. Other Rare Earth Sources
- Commercially important Rare Earth Minerals

1. Monazite
2. Bastnasite
3. Xenotime

Exploration for Rare Earth Resources

Rare Earth Resources of the world

1. China
 2. United States of America
 3. India
1. Beach Placers and Dunes
 2. Inland Placers
 3. Reserves of Monazite
 4. Occurrence of Xenotime

4. Australia

1. Placer Deposits
 2. Hard rock Deposits
1. Mount Weld Deposit
 2. Mary Kathleen
 3. Port Pirie
 4. Olympic Dam
 5. Brazil

Other countries

Table 1.

The Content of Rare Earths and Some Common Elements in the Igneous Rocks of the Earth's Crust

Table 2. Some Rare Earth Minerals and their Approximate Compositions

Table 3.

Typical Placer Minerals and their Specific Gravity

Table 4.

Mineralogical Composition of Typical Placer Samples, as mined in India and Australia

Table 5.

Rare Earth Distribution in Various Rock Forming and Accessory Mineral of Host Rock

Table 6.

The Rare Earth Pattern in Different Layers of an Ion Adsorption Type Deposit

Table 7.

Composition of REO recovered from major Ion-Adsorption Type Deposits in China

Table 8.

The REO Content of Different Types of Ores in China

Table 9.

Analysis of the Typical Loparite Sample

Table 10.

Rare Earths Distribution in Monazite from Different Sources (wt %)

Table 11.

Rare Earth Distribution in REO from Bastnasite from different

Sources (wt. %)

Table 12.

Rare Earth Distribution in Xenotime Samples (wt.%)

Table 13.

Ore Types In Baiyunebo Deposit

Table 14.

Chemical Analysis of Ore Samples from Deposit no. 801, China

Table 15

Some Important Rare Earth Resources of Australia and their Rare Earth and Thorium content

Table 16

Countrywise Distribution of Rare Earth Resources

1. Arc Carbons

Glass Making Industry

1. Decolourization of glass

2. Colouring of glass

3. Special Glasses

1. Spectacle Glass

2. Television and Cathode Ray Tubes

3. Glass for Eye protection

4. Infrared Transmitting Glass

5. Radiation Protection Windows

6. Optical Glass

Laser Glass

Fibre

Glass Polishing Powders

1. Glass Polishing Technology

2. Different Types of Abrasives

3. Manufacturing Methods

4. Producers of Polishing Powders

4. Enamels and Glazes

Catalysts

1. Rare Earths in Cracking Catalysts .

1. Cracking Process

2. Evolution of the catalyst

3. Rare Earth, Exchange of the Zeolite

4. Composition of the catalyst

5. Role of Rare Earths in the Catalyst

Use of Rare Earth Zeolites

6. Rare Earth Consumption

7. Impact of Lead Additive Phase down

8. Scope for using cerium in FCC unit

2. Application of Cerium and Lanthanum in Auto-exhaust Catalysts

1. Catalyst Converter System

2. Role of Rare Earths

3. Other Catalyst Applications of Rare Earths

1. Methanation

2. Ammonia Synthesis

3. Homogenous Catalysis

4. Methane Conversion

Fine Ceramics

1. HighTemperature Structural Ceramics

1. Stabilization of Zirconia

2. Sintering of Silicon Nitride (Si₃N₄)

3. Sintering of Silicon Carbide (SiC)

2. Functional Ceramics
 1. Piezoelectric Materials
 1. Role of REO in Piezoelectric Ceramics
 2. Applications of Piezoelectric Ceramics
 2. Optoelectronic Materials
 1. Applications
 2. Preparation of PLZT Materials
 3. Thermistor, Varistor and Capacitor Materials
 1. PTC Thermistor
 2. Varistor Materials
 3. Grain Boundary Barrier Layer (GBBL) Capacitors
 4. Solid Oxide Fuel Cells
 1. Electrolyte
 2. Electrodes
 3. Interconnecting Material
 5. Oxygen Sensors
 6. Heating Elements
 7. High Temperature Super-conducting Materials
- Rare Earth Based Phosphors
 1. General
 1. Laser Action
 2. Antistoke Emission
 2. Rare Earths as Phosphor Materials
 1. Fluorescence due to 4f Transitions
 2. Fluorescence due to Transitions from 5d to 4f Orbital
 3. Rare Earths as Phosphor Matrices
 3. Major Applications of Rare Earth Phosphors
 1. Low Pressure Mercury Lamps
 1. Desirable Phosphor Properties for Fluorescent Tubes
 2. Phosphors used in Tube Lights
 3. Rare Earth Phosphors in Fluorescent Tubes
 2. Rare Earths in High Pressure Mercury Vapour Lamps
 3. Trichromatic Compact Lamps
 1. Matching of Lamp Light to the Visual System
 2. Red Phosphor
 3. Green Phosphor
 4. Blue Phosphor
 5. Performance of the Trichromatic Lamp
 4. R&D in phosphor Development in India
 5. Preparation of Light Phosphors
 6. Application of Cathodoluminescence of Rare Earth
 1. Colour Television Phosphors
 2. Preparation of Phosphors
 7. Phosphors for Non-illumination Purposes
 8. Electroluminescent Phosphors
 9. Thermoluminescent Phosphors
 10. Rare Earth X-ray phosphors
 1. X-ray screens and scanners
 2. Advantage of Rare Earth Phosphors
 3. Rare Earth Compounds used in X-ray phosphors
 11. Rare Earths in other Medical Imagery

Rare Earths in Nuclear Technology

9. Miscellaneous Applications

1. Application in Agriculture

1. Techniques of Application

2. Nong-le and N.P.K. Fertilizers

3. Areas of Application

2. Dyeing and Currying

3. Colouring of Plastics

Interdependence of Applications and Production of Rare Earths

NIIR PROJECT CONSULTANCY SERVICES (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

Our various services are: Detailed Project Report, Business Plan for Manufacturing Plant, Start-up Ideas, Business Ideas for Entrepreneurs, Market Research, Manufacturing Process, Machinery, Raw Materials, Project Feasibility, Investment Opportunities, Technical Consultancy and Startup Help.

NPCS also publishes process technology books, technical books, startup books, directory, business database, detailed project reports and market research reports.

Our Detailed Project Report aims at providing all the critical data required by entrepreneurs for starting new business ventures.

NIIR PROJECT CONSULTANCY SERVICES

106-E, Kamla Nagar, New Delhi-110007, India
