

Handbook on Textile Auxiliaries, Dyes and Dye Intermediates Technology

Author: NPCS Board of Consultants & Engineers

Format: Paperback

ISBN: 9788178331225

Code: NI221

Pages: 736

Price: Rs. 1,575.00 US\$ 150.00

Publisher: Asia Pacific Business Press Inc.

Usually ships within 5 days

Textile auxiliaries are defined as chemicals of formulated chemical products which enables a processing operation in preparation, dyeing, printing of finishing to be carried out more effectively or which is essential if a given effect is to be obtained. Certain Textile Auxiliaries are also required in order to produce special finishing effects such as wash & wear, water repellence, flame retardancy, aroma finish, anti odour, colour deepening etc. The prime consideration in the choice of Textile materials is the purpose for which they are intended, but colour has been termed the best salesman in the present scenario. The modern tendency is towards an insistence on colour which is fast to light, washing, rubbing, and bleaching; this movement makes a great demand on the science of dyeing. Auxiliaries, dyes and dye intermediates play a vital role in textile processing industries. The manufacture and use of dyes is an important part of modern technology. Because of the variety of materials that must be dyed in a complete spectrum of hues, manufacturer now offer many hundreds of distinctly different dyes. The major uses of dyes are in coloration of textile fibers and paper. The substrates can be grouped into two major classes-hydrophobic and hydrophilic. Hydrophilic substances such as cotton, wool, silk, and paper are readily swollen by water making access of the dye to substrate relatively easy. On other hand hydrophobic fibers, synthetic polyesters, acrylics, polyamides and polyolefin fibers are not readily swollen by water hence, higher application temperatures and smaller molecules are generally required. Dye, are classified according to the application method. Some of the examples of dyes are acid dyes, basic or cationic dyes, direct dyes, sulfur dyes, vat dyes, reactive dyes, mordant dyes etc. Colorants and auxiliaries will remain the biggest product segment, while faster gains will be seen in finishing chemicals. World demand for dyes and organic pigments is forecast to increase 3.9 percent per year through 2013, in line with real gains in manufacturing activity. Volume demand will grow 3.5 percent annually. While the textile industry will remain the largest consumer of dyes and organic pigments, faster growth is expected in other markets such as printing inks, paint and coatings, and plastics. Market value will benefit from consumer preferences for environmentally friendly products, which will support consumption of high performance dyes and organic pigments.

Some of the fundamentals of the book are antimony and other inorganic compounds, halogenated flame retardants, phosphorous compounds, dyes and dye intermediates, textile fibers, pigment dyeing and printing, dry cleaning agents, dry cleaning detergents, acrylic ester resins, alginic acid, polyvinyl chloride, sodium carboxy methyl cellulose, guar gum, industries using guar gum, gum tragacanth, hydroxyethyl cellulose,

polyethylene glycol, industries using polyethylene glycols, etc.

The book covers details of antimony and other inorganic compounds, halogenated flame retardants, silicone oils, solvents, dyes and dye intermediates, dry cleaning agents, different types of gums used in textile industries, starch, flame retardants for textile and many more. This is very resourceful book for new entrepreneurs, technologists, research scholars and technical institutions related to textile.

Contents

1. Antimony and Other Inorganic Compounds

Antimony Compounds

Boron Compounds

Alumina Hydrates

Molybdenum Oxides

Applications

2. Halogenated Flame Retardants

Principles of Developing Flame-Retardant Polymers

Testing

Polymer Classes

Additive Flame Retardants

Reactive Flame Retardants

Economic Aspects

3. Phosphorous Compounds

Mechanism of Action of Phosphorus Flame Retardants

Phosphorus-Based Flame Retardants in Commercial Use

Health and Safety Factors

Economic Aspects

4. Urea-Formaldehyde Resins

Composition Variables

Melamine

5. Melamine-Formaldehyde Resins

New Nitrogen Compounds for Amino Resins

6. High Styrene-butadiene Rubber Resins

7. Chlorinated Biphenyls

8. Chlorinated Paraffins

9. Synthetic Rubber Resin Latexes

Procedure

10. Silicone Oils

Procedure

11. Solvents

TYPES OF VOLATILE SOLVENTS

12. Dyes and Dye Intermediates

Textile Fibers

Cotton and Rayon

Wool and Silk

Cellulose Acetates

Polyamides

Polyester

Acrylics

Vinyls

Polyolefins

Glass Fibers

Paper

THE PROPERTIES OF DYES

CLASSIFICATION OF DYES

Acid dyes

Basic or Cationic Dyes

Direct Dyes

Sulfur Dyes

Vat Dyes

Reactive Dyes

Disperse Dyes

Mordant Dyes

Azoic Dyes

Oxidation Dyes

Ingrain Dyes

THE APPLICATION OF DYES

Fiber Preparation

Dye Bath Preparation

Dye Application

Finishing

DYEING EQUIPMENT

PRINTING

PIGMENT DYEING AND PRINTING

NONTEXTILE USES OF DYES

PRODUCTION AND USES

RAW MATERIALS FOR THE MANUFACTURE OF DYES

DYE INTERMEDIATES

Nitration

Reduction

Amination

Sulfonation

Halogenation

Alkaline Fusion

Oxidation

Other Important Reactions

PRODUCTION OF DYE INTERMEDIATES

THE MANUFACTURE OF DYES

Azo dyes

Manufacturing Processes for Azo Dyes

Triphenylmethane Dyes

Xanthene Dyes

Anthraquinone and Related Dyes

Indigoid and Thioindigoid dyes

Sulfur Dyes

Phthalocyanines

Fluorescent brightening agents

PRODUCTION STATISTICS

NEW DEVELOPMENTS IN DYES

13. Dry Cleaning Agents

Stoddard Solvent

Specification Tests

Perchloroethylene

Specification tests

Procedure

Fluorocarbon Solvent
Used Drycleaning Solvents
Drycleaning Detergents
Methods of Analysis
Specification tests
Procedure
Performance tests
Procedure

14. Acrylic Ester Resins

15. Alginic Acid

About NIIR

NIIR PROJECT CONSULTANCY SERVICES (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

Our various services are: Detailed Project Report, Business Plan for Manufacturing Plant, Start-up Ideas, Business Ideas for Entrepreneurs, Start up Business Opportunities, entrepreneurship projects, Successful Business Plan, Industry Trends, Market Research, Manufacturing Process, Machinery, Raw Materials, project report, Cost and Revenue, Pre-feasibility study for Profitable Manufacturing Business, Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Business Opportunities, Investment Opportunities for Most Profitable Business in India, Manufacturing Business Ideas, Preparation of Project Profile, Pre-Investment and Pre-Feasibility Study, Market Research Study, Preparation of Techno-Economic Feasibility Report, Identification and Section of Plant, Process, Equipment, General Guidance, Startup Help, Technical and Commercial Counseling for setting up new industrial project and Most Profitable Small Scale Business.

NPCS also publishes various process technology, technical, reference, self employment and startup books, directory, business and industry database, bankable detailed project report, market research report on various industries, small scale industry and profit making business. Besides being used by manufacturers, industrialists and entrepreneurs, our publications are also used by professionals including project engineers, information services bureau, consultants and project consultancy firms as one of the input in their research.

NIIR PROJECT CONSULTANCY SERVICES , 106-E, Kamla Nagar, New Delhi-110007, India. **Email:** npcs.india@gmail.com **Website:** NIIR.org
