Production of**

# ***Biodegradable Plastic Bags***

**from Corn and Cassava Starch  
Granules**

**Start Your Own Industry in  
Biodegradable Plastic Packaging**

# Introduction

Biodegradable plastic is plastic that decomposes naturally within the environment. This is often achieved once microorganisms within the environment metabolize and break down the structure of biodegradable plastic. The tip result is one that is less harmful to the environment than traditional plastics.

Biodegradable plastics will be composed of bio-plastics that are plastics made of renewable raw materials. There are usually two types of biodegradable plastic, injection molded and solid. The solid forms normally are used for items similar to food containers, leaf collection bags, and water bottles.

Instead of using packaging materials made of synthetic polymers, new material has been developed using polylactic acid (PLA) or corn starch plastic granules that is formed from cornstarch. The materials made from PLA are biodegradable that is vital for the setting.

**Related Projects:** - [Biodegradable Products, Recyclable, Disposable, Eco-Friendly Plastics](#)

If disposed of correctly, packaging material made up of cornstarch can break down into carbon dioxide and water inside several months. However, if the material isn't disposed of correctly cornstarch-based material can take longer to decompose, especially if there is no oxygen or light available.

The bioplastics prepared from corn and cassava starch granules were found to exhibit properties that are comparable to the already on the market business packaging materials. The bioplastics were also found to be soluble in water and degradable in soil by conducting respective tests, thereby making it environment-friendly.

## Applications

The main applications of biodegradable plastics are presently in (food) packaging, food service ware, (shopping) bags, garbage bags, fibres/nonwovens and agricultural applications. These materials were developed to reduce plastic waste and are biodegradable or rather compostable. Target applications were in products with a relatively short useful life (packaging and disposables) and in applications wherever biodegradability was beneficial (agriculture). The increasing awareness of the environmental impact of packaging products and a willingness to replace packaging materials by alternatives with e.g. a lower carbon foot print or made up of renewable resources are the main driver for development and therefore the use of these materials.

Starch granules use for packaging of Food waste bags, translucent grocery bags, garbage bags, shopping bags, Vegetables and fruits bags.

## Biodegradable Plastics Bags Have Seen their Use are:

- Garbage
- Agriculture and horticulture
- Vegetables and fruits
- Food packaging
- Shopping
- Nursery products
- Toys
- Textiles

# Advantages

- ❖ Biodegradable plastics take less time to break down
- ❖ Biodegradable plastics are renewable
- ❖ Biodegradable plastics are good for the environment
- ❖ Biodegradable plastics require less energy to produce
- ❖ Biodegradable plastics are easier to recycle

- ❖ Biodegradable plastics are not toxic
- ❖ Biodegradable plastics reduce dependence on fossil oil
- ❖ Reduced CO2Emissions
- ❖ Cheaper Alternative
- ❖ Waste
- ❖ Benefit to Rural Economy
- ❖ Reduced Carbon Footprint
- ❖ Multiple end-of-life Options
- ❖ Compostability
- ❖ Reduction of emission of greenhouse gas levels

## Features

- ❖ PLA is a thermoplastic, meaning that it can be melted and reshaped without significantly degrading its mechanical properties. Hence, PLA is mechanically recyclable.
- ❖ It is derived from renewable resources, a sharp contrast to the petroleum-based plastics, which have a finite availability.
- ❖ (Close to) carbon neutral: its renewable sources actually absorb carbon.
- ❖ It does not release toxic fumes when oxygenated.
- ❖ Economic potential: bio-plastics offer a growing market, with opportunities for job creation and development of rural areas, estimates that by 2030 up to 300,000 highly skilled jobs will be created in the bio-market, more than 10 times its current numbers.

# Market Outlook

The intensive adaptability for the use of plastics in sacks & bags and their insufficient disposal is probably going to feature to the immensely increasing pollution setback of conventional, plastics supported petroleum. made up of a range of all-natural plant products such as polyhydroxyalkanoates (PHAs), polylactic acids (PLAs), and corn, biodegradable sacks and bags also contain additives to help degradation and therefore cause a lesser impact on the ecosystem normally as well as aquatic life in particular. These biodegradable bags are being liked over ancient plastic products, especially for the fast-moving consumer goods and food packaging.

The development of biodegradable plastics led plant producers to growing environmental concerns as well as high regulatory standards. The growing demand for viable packaging alternatives across sectors appreciate food, drink and pharmaceuticals fuels demand for biodegradable plastic packaging and therefore support the development of the world plastic packaging market on biodegradable products.

**Related Books:** - Environmentally Friendly, Eco-Friendly Products, Natural Products, Biodegradable Plastics

The primary motivators for the growth and use of such materials are increasing customer consciousness of the environmental effect of packaging goods and a desire to substitute packaging materials for solutions with reduced carbon footprint (or made from renewable resources). But high costs are restricting the growth of the biodegradable plastic packaging market as against regular plastic usage because biodegradable plastic comes from the starch of plants and its decomposition needs specific conditions, similar to temperature, bacteria, humidity, etc. biodegradable plastic bags are made up of polymers similar to polyethylene, polystyrene and polypropylene containing extra ingredients and are tested to degrade or biodegrade in the open environment.

Biodegradable plastic bags are extensively used because of their characteristics similar to light weight and easy disposability. Plastic has been extensively used for packaging in varied sectors across the world. Over the years, the demand for biodegradable plastic is witnessing a higher growth because of the implementation of the stringent regulations on the utilization of non-degradable plastic by various governments across the world and increase in health awareness among the consumers.

**Related Videos: - [Biodegradable Plastic Bag Manufacturing Industry](#)**

**[Bioplastic Carry Bags and Garbage Bags Production](#)**

Owing to increasing awareness among customers about protecting the environment followed by stringent regulatory landscape imposing bans on single use plastic bags, adoption of ecofriendly product manufacturers across the world shifted their focus towards biodegradable and bio-based plastic bags. The food & beverage trade contributes heavily to the biodegradable packaging industry. Thus, the growth of the f&b related packaging can promote the biodegradable bag market growth in coming back years.

The global [biodegradable plastic](#) packaging market was valued at USD 4.65 billion in 2019, and is expected to reach a market value of USD 12.06 billion by 2025, registering a CAGR of 17.04% during the forecast period of 2020-2025. Growing environmental concerns regarding [plastic](#) usage that consists of toxic pollutants which are harming plants, animals, and people are driving the use of [biodegradable plastic](#).

Even though the factors similar to growing consumer preference toward eco-friendly plastic products as well as increasing government emphasis on the utilization of biodegradable plastics are driving the worldwide biodegradable plastics market, the higher cost of biodegradable plastics and shortcomings of biodegradable plastics are anticipated to dampen the market growth. The growing use of biodegradable plastics in the food and beverages business, as well as rapid growth of packaging business, is expected to develop new market growth opportunities for the worldwide biodegradable plastics market in the forthcoming years. The U.S. accounted for the most important market share in bio-degradable bags mainly because of increasing issues regarding the environment in people, which is anticipated to fuel the worldwide market in future.

## Key Players:-

Smurfit Kappa Group, Mondi Group, BASF SE, WestRock Company, Georgia-Pacific, Metabolix, Inc., Cereplast Inc, ALPAGRO Plastics N.V, Novamont S.p.A, Bio Bag Americas, Inc., Biopak Pty Ltd.,

# Reasons for Buying our Report:

- **This report helps you to identify a profitable project for investing or diversifying into by throwing light to crucial areas like industry size, market potential of the product and reasons for investing in the product**
- **This report provides vital information on the product like it's characteristics and segmentation**
- **This report helps you market and place the product correctly by identifying the target customer group of the product**

- **This report helps you understand the viability of the project by disclosing details like machinery required, project costs and snapshot of other project financials**
- **The report provides a glimpse of government regulations applicable on the industry**
- **The report provides forecasts of key parameters which helps to anticipate the industry performance and make sound business decisions**

# Our Approach:

- **Our research reports broadly cover Indian markets, present analysis, outlook and forecast for a period of five years.**
- **The market forecasts are developed on the basis of secondary research and are cross-validated through interactions with the industry players**
- **We use reliable sources of information and databases. And information from such sources is processed by us and included in the report**

# **Scope of the Report**

**The report titled “Market Survey cum Detailed Techno Economic Feasibility Report on Biodegradable Plastic Bags from Corn & Cassava Starch Granules.” provides an insight into Biodegradable Plastic Bags from Corn & Cassava Starch Granules market in India with focus on uses and applications, Manufacturing Process, Process Flow Sheets, Plant Layout and Project Financials of Biodegradable Plastic Bags from Corn & Cassava Starch Granules project. The report assesses the market sizing and growth of the Indian Biodegradable Plastic Bags from Corn & Cassava Starch Granules Industry. While expanding a current business or while venturing into new business, entrepreneurs are often faced with the dilemma of zeroing in on a suitable product/line. And before diversifying/venturing into any product, they wish to study the following aspects of the identified product:**

- **Good Present/Future Demand**
- **Export-Import Market Potential**
- **Raw Material & Manpower Availability**
- **Project Costs and Payback Period**

**We at NPCS, through our reliable expertise in the project consultancy and market research field, have demystified the situation by putting forward the emerging business opportunity in the Biodegradable Plastic Bags from Corn & Cassava Starch Granules sector in India along with its business prospects. Through this report we have identified Biodegradable Plastic Bags from Corn & Cassava Starch Granules project as a lucrative investment avenue.**

## **Select and Choose the Right Business Startup for You**

### **(Instant Online Project Identification and Selection)**

**Finding the right startup business is one of the most popular subject today. Starting a business is no easy endeavor, but the time, effort, and challenges can be worth it if you succeed. To give yourself the best chance to be successful, take your time to carefully find the right business for you.
