### Disposable Surgical Face Mask & N95 Masks

A surgical mask is a loose-fitting, disposable mask that's rectangular in shape. The mask has elastic bands or ties that can be looped behind ears or tied behind head to hold it in place. Which has better bacteria filtration and air permeability while remaining less slippery than woven cloth. The material most commonly used to make them is polypropylene, either 20 or 25 grams per square meter (gsm) in density. Masks can also be made of polystyrene, polycarbonate, polyethylene, or polyester.

The 'N95' designation means that when subjected to careful testing, the respirator blocks at least 95 percent of very small (0.3 micron) test particles. If properly fitted, the filtration capabilities of N95 respirators exceed those of face masks.

Surgical Mask Market size is forecast to reach \$66.70 billion by 2025, growing at a CAGR of 5.76% during the forecast period 2020-2025. Advancements in the field of medical surgery and diagnosis and increase in the number of the medical device manufacturing companies along with the frequent outbreak of epidemics are the major factors

case of medical examination gloves etc. Rubber gloves manufacturing process is not complex and the main raw material is rubber latex. Indian surgical glove market is growing at 15% while the demand for examination gloves has been rising by 20% per annum. The Global Rubber Gloves market is expected to grow at a CAGR of 8.5% between 2014 and 2022. The factors such as rising healthcare expenditure, increasing health threats and increasing hygiene awareness and healthcare regulations are driving the market growth. Foreign exchange risks, rising raw material costs and pricing competition are hampering the market growth.

Demand for disposable gloves in healthcare applications in Spain is estimated to grow at a significant rate over the forecast period. The country has a comprehensive public health system that accounts for approximately 75-80% of the sector's activity. Entrepreneurs who invest in this project will be successful.

### Surgical Hand Gloves

Surgical gloves are personal protection equipment (PPE) designed to protect clinicians in operating room (OR) environments. The primary purpose of surgical gloves is to act as a protective barrier for surgeons and nurses to prevent possible transmission of diseases or pathogens during procedures while working with surgical instruments. Similar to medical examination glove, surgical glove standards are governed by the Food and Drug Administration (FDA) within the United States. However, the FDA requires manufacturers to meet a higher level of quality standards for surgical gloves. All surgical gloves are sterilized and package sealed in pairs for individual use. The sterilization of surgical gloves is standard as surgical procedures often involve open wound operation. Today, surgical gloves are made from a variety of materials which include latex, polyisoprene, neoprene, and nitrile.

A glove is a type of garment which covers the hand of a human. Gloves have separate sheaths or openings for each finger and the thumb; if there is an opening but no covering sheath for each finger they are called "fingerless gloves".

Sterile surgical gloves are used to protect patients and health care workers (HCWs) from infection during surgery and to shield HCWs from exposure to blood borne pathogens. Latex gloves have been used since the nineteenth century, initially by nurses to protect their hands and eventually by surgeons to protect patients from microorganisms. Pow-

**Ayurvedic Herbal Hand Sanitizer**

Herbal hand sanitizer was prepared using leaves extracts of Ocimum sanctum, Eugenia caryophyllus and Cymbopogon flexuosus. The antibiotic sensitivity test of the prepared herbal hand sanitizer against skin pathogens was checked using disc diffusion method and results were compared with commercially available synthetic hand sanitizer. The herbal hand sanitizer gives larger inhibition zone than the commercially available synthetic hand sanitizer against Staphylococcus aureus and Pseudomonas aeruginosa. The efficacy of herbal hand sanitizer was evaluated using microorganism suspensions; which revealed that the herbal hand sanitizer is efficient in reducing higher number of microorganism from the hands as compared to commercial synthetic hand sanitizer. Thus, owing to higher antimicrobial activity and efficacy these herbal extracts can be used in the preparation of herbal hand sanitizers on commercial scale.

In the absence of a vaccine or effective antiviral drugs, hand hygiene is a mainstay of efforts to prevent the spread of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2), the virus that causes COVID-19.

The sanitiser contains natural extracted oils, which increase the antiseptic properties and act against bacterial contamination. It also provides cooling and natural fragrance along with moisturizing the skin upon use.

India hand sanitizer market is projected to surpass \$ 43 million by 2025. Growth of hand sanitizer market in India can be attributed to rising awareness about healthy lifestyle & wellness, shifting consumer preference towards convenient hygiene products and rising disposable income. Moreover, the strong marketing activities by leading brands, in addition to huge endorsements, are some other drivers of hand sanitizer market in India. Moreover, the COVID-19 outbreak has boosted demand for sanitizers like never before across the diverse end user segments.

typically came in the liquid, gel or in foam form and recommended to use when soap and water is not available to wash the hands. Hand sanitizers are now being used on a daily basis in the schools, hospitals, supermarkets, and public places to disinfect the hands and to kill the germs. The alcohol-based hand sanitizers contain 60 to 95% alcohols to kill the bacteria and viruses present on the hand.

The hand sanitizer production line has hand sanitizer mixer, mixing preparation pot, working platform, control panels and essential pipes, valves and filters.

Hand Sanitizer Market size is projected to cross \$2 billion by 2025, growing at a CAGR of 7.8% during the forecast period 2020-2025. Hand Sanitizer is an antiseptic disinfectant available in the form of a liquid, gel, foam and many others. It is said to be more effective than soaps due to its ability to eliminate most microorganisms. Public awareness campaigns by global health authorities such as the WHO (World Health Organization) also play a significant role in promoting the use of hand sanitizers. Increasing consumer awareness about hygiene coupled with such government initiatives are driving the hand sanitizer market.

**Manufacturing of Disposable Personal Protective Equipment (PPE) Kit**

The purpose of personal protective equipment is to reduce employee exposure to hazards when engineering controls and administrative controls are not feasible or effective to reduce these risks to acceptable levels.

PPE is commonly used in health care settings such as hospitals, doctor's offices and clinical labs. When used properly, PPE acts as a barrier between infectious materials such as viral and bacterial contaminants and your skin, mouth, nose, or eyes (mucous membranes). The barrier has the potential to block transmission of contaminants from blood, body fluids, or respiratory secretions. PPE may also protect patients who are at high risk for contracting infections through a surgical procedure or who have a medical condition, such as, an immunodeficiency, from being exposed to substances or potentially infectious material brought in by visitors and healthcare workers. When used properly and with other infection control practices such as hand-washing, using alcohol-based hand sanitizers, and covering coughs and sneezes, it minimizes the spread of infection from one person to another. Effective use of PPE includes properly removing and disposing of contaminated PPE to prevent exposing both the wearer and other people to infection.

The PPE include face shields, gloves, goggles and glasses, gowns, head covers, masks, respirators, and shoe covers. Face shields, gloves, goggles and glasses, gowns, head covers, and shoe covers protect against the transmission of germs through contact and droplet routes.

The global personal protective equipment market size was estimated at USD 50.9 billion in 2019 and expected to register a CAGR of 6.6%. Increasing need for respiratory equipment in mining, emergency response, military and law enforcement, healthcare, and fire services, coupled with rising instances of hand injuries at the workplace, is anticipated to propel market growth over the coming years.

Growing awareness regarding workers' health and safety, in addition to rising industrial fatalities primarily in emerging economies owing to lack of personal protective equipment (PPE), is anticipated to steer the market over the forecast years. Technological innovation, accompanied by changing consumer needs for PPE, is further projected to augment market expansion.

The outbreak of COVID-19 has increased the demand for PPE products including masks, respirators, protective clothing, and gloves. The manufacturing, aerospace, etc. sectors have supplied PPE to their employees to protect them from the sudden outbreak of the pandemic COVID-19. Also, the manufacturers are working at 100% capacity to supply PPE across the regions owing to increasing demand-supply gap. As a result, the demand for PPE is expected to witness growth over the forecast period.

### Liquid Hand Wash

Liquid hand soap contains anionic surfactant, cocamide dea surfactant, coco betaine as amphoteric surfactant, opaque agent as making opaque, dye, fragrance, glycerine for prevention hand outside conditions and etc. In addition, antibacterial agent for making antibacterial hand liquid soap. Making hand liquid soap for children, can be used soft ingredients.

The global liquid soap market size was estimated at USD 18.50 billion in 2018. Rising awareness regarding personal hygiene among adults is expected to remain a key driving factor for the market.

Global Hand Soap market is forecast to witness rapid growth of around 6.7% over the forecast period of 2020-2030. Of all applications, the household segment accounts for more than 70% of the market share. Escalating demand for hand soap was observed in the first quarter of 2020 owing to the COVID-19 pandemic. In the 2nd quarter, the demand is projected to follow an upward trend with increasing awareness about hand hygiene across regions.

The key market players include Reckitt Benckiser Group plc.; Procter & Gamble; Unilever; 3M; Lion Corporation; GOJO Industries, Inc.; Kao Chemicals; Godrej Consumer Products; Bluemoon Bodycare; NEW AVON LLC.; and Pental Products etc.

### Latex & Nitrile Gloves

Nitrile is a synthetic rubber compound that is commonly used as a disposable glove material. Nitrile has a higher puncture resistance than any other glove material. Nitrile also has a better chemical resistance than Latex or Vinyl gloves.

Nitrile gloves are commonly used as exam gloves, but due to their strength, lend themselves to multiple uses. Nitrile comes in powdered form, sterile, non-sterile and of-

fered at different lengths from wrist to forearm. They are designed for multiple uses that include basic exam room checks, to hazardous materials handling, like working with chemotherapy chemicals.

Powder Free Nitrile Gloves are anti-static in behavior, good solvent resistant, odour free, and hence useful in food and dairy industry. Powder-free gloves reduce the cause of allergies by lowering protein and chemical content.

Nitrile gloves however are not as soft as latex gloves, and are not known for being easy to wear. In fact, their strength is a weakness when dealing with applications that require fine movements and dexterity. Nitrile is also slightly more expensive to produce.

**MARKET OF NITRILE GLOVES:** The Global Nitrile Gloves Market is expected to reach USD 3.50 Billion by 2027. Growth in the incidences of epidemic diseases and the subsequent increase in the demand for infection prevention and control utilities are expected to drive the market demand in the forecast period.

Nitrile gloves are primarily used in the medical sector as a safety tool to prevent the spreading of infection between caretakers and patients. The benefits offered by nitrile gloves include superior strength, longevity, and better protection against bloodborne pathogens.

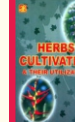

Asia Pacific market is estimated to witness the fastest growth rate of 6.5% in the nitrile gloves market. This can be chiefly attributed to the growth of the healthcare sector and the food processing industry in the leading countries in this region, especially China, India, and South Korea.

**MARKET OF LATEX GLOVES:** Latex gloves are natural material, made out of rubber. Gloves are disposable items used during medical examinations and procedures intended to prevent cross-contamination between healthcare providers and patients. Examination gloves are sized in XS, S, M and L. Some brands also offer size XL. Gloves are mainly used by healthcare professionals generally for examination and surgery. Surgical gloves are generally sized more specifically since they are worn for a much longer period of time and require excellent dexterity. There are various benefits of latex gloves such as properly fit to skin, good touch sensitivity, cost-effective, can be worn for an extended

India disposable gloves market generated \$303 million in 2017, and is projected to reach \$760 million by 2025, growing at a CAGR of 12.4% from 2018 to 2025. In terms of volume, the market is growing at a CAGR of 8.3% from 2018 to 2025.

**ROLE OF GLOVES IN COVID-19:** Medical gloves are used by health care personnel to prevent the spread of infection or illness. Medical gloves are disposable and include patient examination gloves and surgeon's gloves.

Nitrile gloves are preferred over latex gloves because they resist chemicals, including certain disinfectants such as chlorine. There is a high rate of allergies to latex and contact allergic dermatitis among health workers. However, if nitrile gloves are not available, latex gloves can be used. Non-powdered gloves are preferred to powdered gloves

### Stable Bleaching Powder

Bleaching process are those which remove color from natural or artificial products. In early times bleaching was done by mechanical means and bleached goods were available only to rich. Today the bleaching to textile, paper and other materials constructed from natural fibers is done largely by

the chemical agents and bleached articles are available to all. Bleaching powder is used to whiting or removing the natural color of textile fibers, yarns, wood pulp, paper and other products by chemical reaction and also is an additive in the scouring powder preparation as germicide. Its storage life is short, especially in warm climates.

Because of the instability of bleaching powder at higher temperatures, a more stable bleaching compound was sought.

Bleaching powder stirred into water, soda ash is added, the sludge is allowed to settle and the clear solution of sodium hypochlorite is used as a source of bleach. As liquid chlorine became more easily available many laundries prepared their own sodium hypochlorite solution a practice that persisted. There is demand of bleaching powder increase by 5-7% per annum. Now bleaching powder used largely in the water pollution controlling agent. The commercial laundry industry developed at the turn of the century and has continued to grow rapidly. The progress was showing ups and downs.

### Liquor from Mahua Flower

Mahua flower belonging to saponaceous family is an important tree. The flowers are largely used in preparation of distilled liquors. The freshly prepared liquor has a strong smoky foetid odour, which disappears on ageing. Red is tilled and carefully prepared liquors are of good quality. The flowers are also used for the preparation of vinegar. The major components of flowers are sugars and additionally it contains proteins, vitamins, organic acids and essential oils. The

ripe flowers, which fall from the tree are collected. The yield per tree ranges from 100-200 kgs. These are dried in the sun and sent to distilleries. The yield of proof spirit per tone of mahua flowers is approximately around 450 liters. The cost of dried mahua flowers is quite less in comparable to other raw materials source.

From earliest times man has sought for beverages, which give him refreshment, and now some of them have become almost an essential part of human diet. There are two kinds of beverages non-alcoholic and alcoholic. There are some alcoholic beverages which are fermented but are subsequently distilled is produced with the aid of yeast culture. These strains bring about these fermentation one of the main alcoholic beverages is the country liquor which is the poor man's drink. Country liquor has high intoxicating properties. In India IMFL (Indian Made Foreign Liquors) is too much costly than country liquor, so IMFL is not available for a common man. But being cheaper the country liquor than IMFL, so far a common public, it is quite available, and they consume a huge amount.

Worldwide production of country liquors rises steadily each year, which attests the buoyant condition of the producing industries. Future prospects must therefore be extremely rosey. Country liquor is generally used for direct consumption. The people who cannot afford the prices of foreign liquor, they go for country liquor. So mostly poor class people will get full utility from the country liquor. The demand of country liquor is increasing rapidly, so there is wide scope for new entrepreneurs.

### Beer Plant

Beer contains approximately 90% water, and the importance of the liquor to final beer quality cannot be over-estimated. Historically a correlation was observed between the liquor composition of an area and the type of beer that the region could best brew. There are several steps in the brewing process, which include malting, milling, mashing, lautering, boiling, cooling, fermenting, maturation, filtering, and packaging. The production of malt beverages, or beer, comprises four main stages: brew house operations, fermentation, aging or secondary fermentation, and packaging.

The annual growth in the Indian beer market has been around 8% in the recent years, which compares well with the growth in China. But the Chinese market of 20 mn kl is over 25 times more than the Indian market of over 900,000 kilolitres. The Beer market in India will grow at a CAGR of 16.94 percent and 14.57 percent on the basis of revenue and volume.

The Global Beer Market was valued at \$593,024 million in 2017, and is projected to reach \$685,354 million by 2025, growing at a CAGR of 1.8% from 2019 to 2025. As a whole there is a good scope for new entrepreneur to invest in this business.

### IV Fluids (BFS Technology)

In nursing homes and hospital where patients are suffering from acute dehydration or considerable debilitating conditions, the intra venous fluids are used as IV drips. The basic function of IV fluids is to replenish the body fluids.

Although there are a number of IV fluids but generally three types of IV fluids are used in hospitals as IV drips. Intravenous fluids are fluids which are intended to be administered to a patient intravenously, directly through the circulatory system. These fluids must be sterile to protect patients from injury, and there are a number of different types available for use. Many companies manufacture packaged intravenous fluids, as well as products which can be mixed with sterile water to prepare a solution for intravenous administration.

Fluids are given when someone's body fluid volume falls. There are a number of things which can cause a drop in fluid volume. Vomiting and diarrhea are a classic example, which is why people are encouraged to drink fluids when they are sick, to keep their fluid volume stable.

The market for Intravenous (IV) Solution is expected to reach USD 11,511.2 million by 2022 and is expected to grow at a CAGR of 7.69% during the forecast period 2016-2022. Intravenous (IV) solutions are fluids which are intended to be administered to a patient directly into the venous circulation. These fluids are sterile fluids which protect patients at the time of serious dehydration. There are various type of IV solutions available for use in the market. Many companies manufactures packaged intravenous fluids or products or compounds which can be mixed with sterile water to prepare a solution for intravenous administration.

The global Intravenous (IV) solutions market was valued at USD 6.9 billion in 2015 and is projected to grow at a CAGR of 7.8% over the forecast period. The emergence of this market is attributed to the fast growing geriatric population and prevalence of malnutrition in the elderly and pediatric population.

Lithium Ion Battery (Battery Assembly)

Lithium batteries are now powering a wide range of electrical and electronic devices, including laptop computers, mobile phones, power tools, telecommunication systems and new generations of electric cars and vehicles. Lithium metal batteries and lithium ion batteries. Basically, the difference between them is that lithium metal batteries are those that are not rechargeable, thus, primary, and lithium ion batteries are those that can be recharged. As an example, your laptop or cell phone is likely to have a lithium ion battery, whereas your watch may have a lithium metal battery.

During charging, lithium ions (yellow circles) flow from the positive electrode (red) to the negative electrode (blue)

through the electrolyte (gray). Electrons also flow from the positive electrode to the negative electrode, but take the longer path around the outer circuit. The electrons and ions combine at the negative electrode and deposit lithium there.

The India lithium-ion battery market is expected to grow at a robust CAGR of 29.26% during the forecast period, 2018-2023. The Indian automobile sector is one of the most prominent sectors of the country, accounting for nearly 7.1% of the national GDP. The industry produced a total of 25.31 million vehicles, including commercial, passenger, two, and three vehicles and commercial quadricycle in April-March 2017, as against 24.01 million in April-March 2016. **Paracetamol**

**P**aracetamol, also known as acetaminophen or APAP, is a medication used to treat pain and fever. It is typically used for mild to moderate pain. It is often sold in combination with other ingredients such as in many cold medications. In combination with opioid pain medication, paracetamol is used for more severe pain such as cancer pain and after surgery. It is typically used either by mouth or rectally but is also available intravenously. Effects last between two and four hours.

Paracetamol lacks anti-inflammatory action in rheumatic disorders. However, it is less toxic than the Aspirin and does not produce anemia and liver damage, which sometimes result from the continued use of acetanilide and acetophenetidine. It is also an important intermediate in the manufacture of other pharmaceuticals like the antimalarial-amodiaquine.

The pharmaceutical industry in India ranks 3rd in the world terms of volume and 14th in terms of value. 20% of global exports in generics, making it the largest provider of generic medicines globally. USD 45 Billion in revenue by 2020, revenue of USD 55 billion by 2020 as base case, and can grow to USD 70 billion in a aggressive case scenario. USD 26.1 Billion in generics by 2016. USD 200 Billion to be spent on infrastructure by 2024.

Global pharma companies are increasingly exploring low cost option to outsource research and manufacturing,

because of emerging slow-down in patented drug sales and high cost of R&D. Any entrepreneur venture into this field will be successful.

**Active Pharma Ingredients (API)**

An active ingredient (AI) is the substance in a pharmaceutical drug or a pesticide that is biologically active. The similar terms active pharmaceutical ingredient (API) and bulk active are also used in medicine, and the term active substance may be used for pesticide formulations. Some medications and pesticide products may contain more than one active ingredient. A dosage form: the API, which is the drug itself; and an excipient, which is the substance of the tablet, or the liquid the API is suspended in, or other material that is pharmaceutically inert. Drugs are chosen primarily for their active ingredients. The Indian pharmaceutical industry also needs to take advantage of the recent advances in biotechnology and information technology. The future of the industry will be determined by how well it markets its products to several regions and distributes risks, its forward and backward integration capabilities, its R&D, its consolidation through mergers and acquisitions, co-marketing and licensing agreements.

**USES AND APPLICATIONS:** API like Cephalixin is used to treat a number of infections including: otitis media, streptococcal pharyngitis, bone and joint infections, pneumonia, cellulitis, and urinary tract infections. It may be used to prevent bacterial endocarditis. Amoxicillin is used in the treatment of a number of infections, including acute otitis media, Streptococcal pharyngitis, pneumonia, skin infections, urinary-tract infections, Salmonella, lyme disease, and chlamydia infections. It is also used to prevent bacterial endocarditis in high-risk people who are having dental work done, to prevent strep pneumococcus infections in those without spleens, and for both the prevention and the treatment of anthrax. Ibuprofen is used primarily for fever, pain, dysmenorrhea and inflammatory diseases such as rheumatoid arthritis. It is also used for pericarditis and patent ductus arteriosus.

Disposable cutlery and containers are products that are a part of our day to day life. Disposable items like cups, plates, saucers are being increasingly used. Such disposable items are made with natural materials like leaf as well as manmade products like paper, plastics. Leaf cups, plates have greater hygiene value.

Banana leaf plate making is a state of the art to develop biodegradable and compostable alternatives to petrochemical based plastics and polystyrene. Banana leaf plates is best described as a revolutionary product and is strong just like the ordinary pulp paper plates and are made from

natural, biodegradable product. These leaf plates are popular among those who appreciate the concept of using natural plate materials in an original and organic way.

The banana leaf plates can be manufactured with the best quality leaves and are distinct in style. These are the perfect pieces used for serving any occasion, party, gatherings or grand party. These plates can be easily disposed and are environment friendly. Environment friendly products helps to keep the environment clean and make the planet good to live.

### Battery Sprayer

A sprayer is a device used to spray a liquid, where sprayers are commonly used for projection of water, weed killers, crop performance materials, pest maintenance chemicals, as well as manufacturing and production line ingredients. In agriculture, a sprayer is a piece of equipment that is used to apply herbicides, pesticides, and fertilizers on agricultural crops. Sprayer is a machine used to apply liquid chemicals on plants to control pest and diseases. It can also be used to apply herbicides to control weeds and to spray micro-nutrients to enhance plant growth.

A significant proportion of farmers in the country have already started moving from using animate sources to mechanical equipments to power their farming activities. Mechanical equipments for various farm operations like tillage, sowing, irrigation, plant protection and threshing, etc., are generally being used by the farming community. The Agricultural Sprayers Market can be segmented on the basis of type, component, power source, and application. Based on type, the market is segmented into low pressure sprayers and high-pressure sprayer. Low pressure sprayer is further segmented into tractor mounted, high clearance sprayer, trailer-mounted sprayers and truck mounted sprayers. Fuel-based sprayer are dominating the global agriculture spray market due to its raising demand owing to its large capacity. Solar sprayer is considered to be the fastest growing segment due to increasing demand for environmentally friendly agriculture sprayer across the globe.

## Non Woven Fabric

Nonwoven fabrics are broadly defined as sheet or web structures bonded together by entangling fiber or filaments (and by perforating films) mechanically, thermally or chemically. Nonwoven fabrics are engineered fabrics that may be single-use, have a limited life, or be very durable. Nonwoven fabrics provide specific functions such as absorbency, liquid repellence, resilience, stretch, softness, strength etc. Nonwoven fabric is used alone or as components of apparel, home furnishings, health care, engineering, industrial and consumer goods.

Non-woven fabric market is expected to grow over the CAGR of around 8.2% during the period 2018 to 2023 engineered to provide particular properties for desired end uses with rapid increase in population. Today, India's nonwovens industry is developing under the spotlight, industry observers are closely looking at the Asian giant, and estimate it will become an important force of the global nonwovens industry in the near future. ## Sugarcane Juice Preservation and Bottling Plant

Sugarcane juice is quite nutritious as it contains natural sugars, minerals like iron, magnesium, phosphorus, calcium and organic acids e.g. malic acid, succinic acid, acotinic acid etc. Preservation is done when Juice or food is kept for longer period without any deterioration or spoils the

juice by the direct contact with atmosphere.

Sugarcane juice is excellent in treating urinary related diseases. It keeps the urine flow clear and aids the kidneys to perform better.

Sugarcane juice relieves the burning sensation which arises

due to infections of the urinary tract. The sugar cane juice provides the glucose, which is stored, as glycogen to be 'burned' by muscles when required. Sugar Industry contributes about 2500 crore rupees as tax to both central and state governments. The industry size in terms of capital is more than Rs. 40,000 crore. Almost 50 million people depend on sugar industry for their livelihood. We actively encourage a culture of innovation, which facilitates the development of new technologies and ensure a high quality product.

**Aluminium Foil**

**A**luminium foil is aluminium prepared in thin metal leaves, with a thickness less than 0.2 millimetres (8 mils), thinner gauges down to 6 µm (0.2 mils) are also commonly used. Standard household foil is typically 0.016 millimetres (0.6 mils) thick and heavy duty household foil is typically 0.024 millimetres (0.9 mils). The foil is pliable, and can be readily bent or wrapped around objects. Aluminium foil is produced by rolling sheet ingots cast from molten aluminium, then re-rolling on sheet and foil rolling mills to the desired thickness, or by continuously casting and cold rolling.

There are around 10 Major Aluminium Foil manufacturers in India with rolling capacity of around 10000 tons per month to cater the total demand of around 12000 tons per month in different field of pharmaceuticals and flexible packaging industries. The Global demand for aluminium foil is forecast to expand 8.7% p.a. between 2014 and 2018. As a whole there is a good scope for new entrepreneur to invest in this business.
