

8 Manufacturing Business Plans

Y-1687

- Banana Powder
- Bamboo Paper Based Products
- Tomato Products
- IV Fluids (BFS Technology)
- Disposible Surgical Gloves
- Natural Glycerine
- Pectin from Citrus
- Dehydrated Onion

Introduction

Get ready and quickly go through these top business ideas that are the best options available with high return on investment. Choose any of these high net profit margin ideas if you want to start a venture in the manufacturing industry.

Projects: - [Project Reports & Profiles](#)

Becoming an entrepreneur easier than ever before—technology is shrinking the world, opening markets, and making it possible for many people to strike out on their own in the field of their dreams. An entrepreneur who starts his own business can break free from this actuarial perspective and redefine the value he brings to the market. Whether you view starting a business as an economic necessity or a way to make some additional income, you might find it generates a new source of income. The main reason for starting a business should be giving something to society. This section is specially written for just exploring the big number of business ideas that you refer before starting a business. **Books:** - [BOOKS & DATABASES](#)

Bamboo Paper Based Products Tissue Paper, Paper Bags & Plates

Tissue paper is produced by using the paper pulp of hardwood and softwood trees, water and chemicals. It is majorly used for hygiene and sanitation purposes as it is more suitable and convenient to use for cleaning and dry wet surfaces. In addition, tissue paper is the soft, absorbent and disposable paper which is used for multipurpose including cleaning face as most suitable alternatives to the washable handkerchiefs, toilet paper, table napkins, etc.

Toilet paper comes in various plies or layers of thickness, from one-ply all the way up to six-ply, meaning that it is either a single sheet or multiple sheets placed back to-back to make it thicker, stronger and more absorbent. Facial tissue and paper handkerchief refers to a class of soft, absorbent, disposable papers that are suitable for use on the face. They are disposable alternatives for cloth handkerchiefs.

Related Projects:- [Bamboo and Bamboo Products, Value-Added Bamboo Products](#)

Paper bags are widely used in clothing, food, shoes, gifts, alcohol, drugs and other areas of packaging. At present, we can use them a lot of paper divided into two types of mobile. Bamboos plates are eco-friendly are come from 100 percent bamboo. They are also both compostable within a quick 2-6 months depending on the product and the process used to create it. Bamboo is quickly becoming very popular due to its ease of growth and cultivation. It can grow in many kinds of climates and reproduces both quickly and easily.

Increasing awareness regarding health and hygiene among the population is one of the key factors supporting the growth of the tissue paper market. The other key factors which are responsible for driving the tissue paper market include ease of use, cost-effectiveness and low penetration of tissue paper substitutes across the globe. Moreover, increasing women workforce has led to the growing usage of tissue paper products that will further boost the global tissue paper market. A rise in the healthcare expenditure and change in the lifestyle of consumers will propel the growth of the tissue paper market.

Related Books:- [Cultivation, Utilization And Processing Of Fruits, Vegetables, Flowers, Coconut, Tea, Bamboo And Wood Derivatives](#)

Globally the organic tissue paper market is estimated to escalate at a higher growth rate which is supported by increasing demand of naturally biodegradable personal care products. Rising application of organic tissue paper for facial application is supporting the market growth. Availability of different product type and improved distribution channel is playing the key role for organic tissue paper market growth. All these factors contribute to the calculated CAGR of 4.2% of organic tissue paper market during 2017-2023. The Indian Paper Industry accounts for about 1.6% of the world's production of paper and paperboard. The global paper industry is highly concentrated in the China, United States, Japan, Germany, Canada, Finland, Sweden & Indonesia which together accounted for more than 65% of total paper production.

Related Videos:- [Bamboo and Bamboo Products, Value-Added Bamboo Products](#)

Tomato Products Tomato Ketchup, Sauce and Soup

Tomatoes are widely consumed and worldwide cultivated. They are one of the most important crops around the world. Tomato (*Lycopersicon esculentum*) belongs to the genus *Lycopersicon* under Solanaceae family. Tomato is an herbaceous sprawling plant growing to 1-3 m in height with weak woody stem. The flowers are yellow in colour and the fruits of cultivated varieties vary in size from cherry tomatoes, about 1–2 cm in size to beefsteak tomatoes, about 10 cm or more in diameter. Most cultivars produce red fruits when ripe. Tomato is a native to Peruvian and Mexican region. Tomato is indigenous to the Peru and Equator region in South America and it probably evolved from *Lycopersicon esculentum* var. *cerasiforme*, the cherry form. However, it was domesticated and first cultivated in Central America by early Indian civilizations of Mexico. Tomato is a valuable raw material used for processed products such as juice, puree, and paste, ketchup/sauce, and canned whole. The recent scientific advances have revolutionized tomato processing industries.

Related Projects:- [Tomato Products: Tomato Juice, Tomato Puree, Tomato Ketchup](#)

Tomato ketchup, Soups and Sauce are all palatable foods, used in all hotels, restaurants and houses. Tomatoes sauce and ketchup can enhance the flavor of almost any cooked dish. Cooking tomatoes — such as in spaghetti sauce — makes the fruit heart-healthier and boosts its cancer-fighting ability. All this, despite a loss of vitamin C during the cooking process, substantially raises the levels of beneficial photochemical. Ketchup is a sweeter and diluted version of puree (Pulp). Tomato sauce tastes sweet and sour. Both sauce and ketchup are consumed with food and snacks.

Related Books:- [Food Processing, Food Industry, Agriculture, Agro Processing](#)

Tomato processing industry is huge. The only ketchup and sauce market in India is pegged at Rs 1,000 crore and growing at around 20% year-on-year. There is a big market for the processed tomato products. The market scenario has revealed a positive indication for the specially packed tomato sauce in local as well as outside market. Rapid urbanization has increased the use of processed tomato products. With the growing patterns of fast food consumption in the country the need for ketchup is also increasing. According to a recent survey conducted by Down to Earth it is estimated that Indians spend about ` 4,449 crore a year in fast-food centers.

IV Fluids (BFS Technology)

Fluids are given when someone's body fluid volume falls. There are a number of things which can cause a drop in fluid volume. Vomiting and diarrhea are a classic example, which is why people are encouraged to drink fluids when they are sick, to keep their fluid volume stable. Another cause is blood loss, which causes problems both because people lose blood products, and because they experience a loss in fluid volume. Electrolyte levels in the blood can also become unstable as a result of rapid changes in fluid volume, in which case intravenous fluids can be used to restore the balance.

Related Projects:- [IV Fluids, I.V. solutions, Intravenous fluids, Normal Saline \(NS, 0.9NaCl, or NSS\), Lactated Ringers](#)

Intravenous fluids are fluids which are intended to be administered to a patient intravenously, directly through the circulatory system. These fluids must be sterile to protect patients from injury, and there are a number of different types available for use. Many companies manufacture packaged intravenous fluids, as well as products which can be mixed with sterile water to prepare a solution for intravenous administration.

Intravenous (IV) solutions are fluids which are intended to be administered to a patient directly into the venous circulation. These fluids are sterile fluids which protects patients at the time of serious dehydration. There are various type of IV solutions available for use in the market. Many companies manufacture packaged intravenous fluids or products or compounds which can be mixed with sterile water to prepare a solution for intravenous administration.

Related Books:- [Pharmaceutical, Drugs, Proteins Technology Handbooks](#)

The market for Intravenous (IV) Solution is expected to reach USD 11,511.2 million by 2022 and is expected to grow at a CAGR of 7.69% during the forecast period 2016-2022. The factors which drive the growth of the market are the rising prevalence of chronic diseases, rising acceptance of vitamin C intravenous treatment therapy to treat colorectal cancer.

Related Videos:- [Pharmaceutical, Drugs, Fine Chemicals, Bulk Drug Intermediates, Pharmaceutical Drugs, Pharma Drug Ingredients Intermediates, Pharmaceutical Bulk Drugs](#)

Disposable Surgical Gloves

A surgical (surgeon's) glove is made of natural or synthetic rubber intended to be worn by operating room personnel to protect a surgical wound from contamination. Surgical gloves have more precise sizing (numbered sizing, generally from size 5.5 to size 9), and are made to higher specifications. They are hand specific. Non-latex materials gloves have not yet replaced latex gloves in surgical procedures, as gloves made of alternate materials generally do not fully match the fine control or greater sensitivity to touch available with latex surgical gloves.

High-grade non-latex gloves (such as Nitrile gloves) also cost two or more times the price of their latex counterparts, a fact that has often prevented switching to these alternate materials in cost-sensitive environments, such as many hospitals. Powder-free medical gloves are also used in medical clean room environments, where the need for cleanliness is often similar to that in a sensitive medical environment. Similar but specially tested gloves are used in electronics clean rooms.

Related projects: - [Surgical, Medical Plastics, Medical Disposables, Disposable Medical Products used in Hospitals](#)

The global disposable gloves market size was valued at USD 8.19 billion in 2017. Growing demand for disposable gloves in medical and healthcare, pharmaceutical, automotive finishing, chemical, and oil and gas industries has been a major factor driving the industry over the past few years. In addition, use of the product in the food processing industry is likely to complement market growth. Increasing awareness pertaining to employee health and safety, coupled with rising concern regarding skin diseases in the industrial sector, is expected to drive the market over the projected period. Technological innovation, supported by availability of customized designs to cater to specific industry demands, is likely to have a positive impact on demand.

Related Books:- [Disposable Products \(Medical, Surgical, Thermocol, Plastic, Paper, Domestic And General Products\)](#)

Increasing aging population and occurrences of chronic health issues necessitate the presence of reliable and upgraded emergency medical services. Growing demand for outpatient, ambulatory care and EMS in U.S. is expected to steer investments in medical infrastructure over the long term, subsequently driving demand for medical products such as gloves.

Related Videos: - [Disposable Products](#)

Natural Glycerine

Glycerine (sometimes called “glycerin”) is the name of the commercial product consisting of glycerol and a small amount of water. Glycerol is actually dihydric alcohol $C_2H_5(OH)_3$, which is more accurately named 1, 2, 3-propanetriol. Much of the naturally produced (as opposed to synthetic) glycerin is a coproduct of saponification of fats using caustic soda. Glycerine is a dihydric alcohol and, like other alcohols, forms esters, ethers, amines, aldehydes, and compounds analogous to metallic alcoholates. But, because of its multiple hydroxyl groups, it can be reacted to form an unusually large number of derivatives. One, two or three of these hydroxyls can be replaced with other chemical groups, thus permitting the synthesis of many different derivatives with properties designed for specific applications.

Related Projects: - [Biotechnology, Bio-Technology, Industrial Biotechnology, Biotech Sector, Industry, Biotech Projects, Enzymes Papain, Phytase](#)

Global glycerin market witnessed a decline in demand in recent years, shadowing the slump in macro economy. The crude glycerin market was largely depressed in comparison to refined glycerin, due to the inability to transform crude glycerin into refined products.

Nonetheless, the market has bottomed out of the recession and is displaying early signs of recovery. Operations as well as demand in the overall market for oleo chemicals, including glycerin, improved considerably in 2010. However, increasing prices for feedstock is expected to hinder the market in the near term. Setting up of new plants for conversion of glycerin into polyol including ethylene glycol and propylene glycol is forecast to open a wide range of downstream markets for glycerin.

Related Projects:- [Biotechnology, Nanoscience, Nanotechnology, Enzymes, Food Biotechnology, Vermiculture, Vermicompost, Bio-Fertilizer, Organic Farming, Biogas](#)

The worldwide glycerin market is known for its unpredictable and complex nature as it is produced as a co-product of canola methyl ester production and is marketed in refined or crude form. Production of glycerin is directly affected by demand in several end use segments including pharmaceuticals, food and personal care.

Demand drivers for glycerin market include a wide range of existing applications, economical new end-uses, loyal end users who are unwilling to use substitutes, and eco-friendly nature of products. Further, as glycerin turns less expensive than other humectants, it stands to be the preferred choice among oleo chemicals. Increased applications of glycerin in various sectors such as pharmaceuticals, personal care and food & beverages, coupled with lower import duties in the Chinese market is expected to boost demand for glycerin in the Asia-Pacific region. Latin America is projected to register the fastest compounded annual growth rate of 6.75% over the analysis period.

Pectin from Citrus, Lemon and Oranges

Pectin is a naturally occurring substance (a polysaccharide) found in all plant tissue, calcium pectin being present between the cell walls and serving as a strengthening or building agent. Fruits naturally possessing relatively large amount of pectin include lemons, bitter oranges, apples, quinces, currants and plums. Pectins are a class of complex polysaccharides found in the cell walls of higher plants, where they function as a hydrating agent and cementing material for the cellulosic network. They are commonly produced during the initial stages of primary cell wall growth and make about one third of the cell wall of dry substances of dicotyledonous and some monocotyledonous plants. The main exceptions are the cell walls of the Germaine family, which may contain pectin of normal structure but in very small amounts.

Related Projects:- Chemicals (Organic, Inorganic, Industrial) Projects

In recent days, pectin has found increased application as an additive to dairy products. Yogurt containing fruit bases has been growing in popularity. Substituting pectin for modified starch as a thickening agent in yogurts will maintain a uniform distribution of fruit throughout the yogurt without masking delicate fruit flavors.

Furthermore unlike starches, pectin will not introduce a floury texture to yogurts. If the fruit bases contain 60% sugar, then HMP can be added. If the sugar content is lower than 60%, then ALMP is added. HMP stabilizes casein against a predation, when heated a pH less than 4.3. Thus it is added as a stabilizer in ultrahigh-temperature-treated yogurt drinks and to milks blended with fruit juices.

Related Books:- [Chemical Technology \(Organic, Inorganic, Industrial\), Fine Chemicals](#)

The global pectin market has grown at a CAGR of around 6% during 2008-2015. Market for pectin has been witnessing significant growth on account of rising demand for food products from developed as well as developing economies. The industry has been mature in developed regions such Europe, followed by North America. However, the industry for pectin is anticipated to grow rapidly in emerging economies such as China and India owing to change in lifestyle of the individuals as well as changing consumer preferences for convenience foods. Moreover, economic development in China has resulted in increasing purchase power of consumers, leading to increasing demand for high-quality processed foods.

Dehydrated Onion

Onion is one of the most important commercial vegetable crops grown in India. Both immature and mature bulbs are used as vegetable and condiment. It contains vitamin B and a trace of vitamin C and also traces of iron and calcium. The outstanding characteristic of onion is its pungency, which is due to a volatile oil known as ally-propyl disulphide. Onions compared with other fresh vegetable are relatively high in food energy, intermediate in protein content and rich in calcium and riboflavin.

In the food processing field, dehydration is sometimes described as the removal of 85% or more of water from a food substance, by exposure to thermal energy by various means. Thermal dehydration reduces volume of the product, increases shelf-life, and lowers transportation cost. There is no clearly defined line of demarcation between drying and dehydrating, and latter sometimes being considered as a supplement of drying. Usually, the direct use of solar energy, as in the drying of raisin, layette is not lumped with dehydrating. The term dehydration also is not generally applied to situations where there is a loss of water as the result of evaporation.

Related Projects:- [Onion Processing and Value Added Products of Onion. Vegetables and Agriculture based Projects](#)

Dehydrated onions are used chiefly as a constituent in various food products i.e. they are sold to manufacturing concerns as an industrial raw material and demand for dehydrated onions is a function of the demand of these food products. However there is a demand for dehydrated onions for use as culinary onions, both by large catering concerns - institutions and industrial canteens; and for domestic use. The other use of dehydrated onions is in the manufacture of dried soups-once virtually the sole outlet for these products, but now declining in relative importance, as other applications including use in canned soups and stews, baby foods, fish, meat and bakery products and more recently in dried 'ready-meals' have been developed. So far as possible both merchants and users were consulted in due course. Since there are relatively few dried soup manufacturers, it was possible to contact a majority of the users in this class. Retail outlets obtain supplies largely from food manufacturers. The different market sectors account for varying proportions of demand for dehydrated onions. Dehydrated onion slices and pieces are sold to all four market sectors.

Related Books:- [Cultivation, Utilization And Processing Of Fruits, Vegetables, Flowers, Coconut, Tea, Bamboo And Wood Derivatives](#)

The global market for dehydrated onions registered the revenue worth US\$ 950 MN in 2017, which is likely to reach in excess of US\$ 1,500 Mn by the end of 2028. Future Market Insights expects the dehydrated onions market to observe stable growth at a promising CAGR of 4.8% over the 10-year assessment period, 2018-2028. India had exported about 50,000 tonnes in 2016 and the industry is expecting to export about 35,000-40,000 tonnes. India is offering dehydrated onions at \$1,650 per tonne while China and Egypt offer it in \$2,000 a tonne. On the other hand, the country is having about 20,000 tonnes of dehydrated onion carry-forward stock unsold with the producers. Exports begin in January every year and by June end, the country exports almost 85-90 per cent.

Banana Powder

Banana is the common name for a type of fruit and also the herbaceous plants of the genus Musa. Banana is amongst the most versatile and most widely eaten fruits in the world today. Bananas come in a variety of sizes and colors when ripe, including yellow, purple, and red. Bananas can be eaten raw though some varieties are generally cooked first.

Banana fruit is economically one of the most important fruit produced and consumed in the world. In some parts of the world, banana is called plantain. The soft and sweet fruit of this tropical plant is enjoyed by people from around the world. Fully ripe banana pulp contained 33.6% reducing sugars, 53.2% sucrose, 5.52% protein, 0.68% fat, 0.30% fiber, 2.58% starch and 4.09% ash.

Related Projects:- [Banana Products: Banana Flavour, Banana Puree, Banana Based Industries](#)

Banana has various uses that can be turned into many processed products. In addition to banana exporting, processing banana into different products could mean additional income for banana farmers. Banana powder is a powder made from processed bananas. Banana powder is formed by using banana pulp, which is chopped and then processed with hydraulic shear using a colloid mill, turning it into a paste.

The paste is then dried by either spray or drum-drying. Good quality pulp with proper drying produces good quality powder. Spoilage due to microbial and enzyme activity is greatly reduced at the moisture level of 7.0% but caking is easily developed in banana powder during storage if improper packaging materials are used for the purpose due to its high sugar content.

Related Books:- [Cultivation, Utilization And Processing Of Fruits, Vegetables, Flowers, Coconut, Tea, Bamboo And Wood Derivatives](#)

Banana powder is also a major source of carbohydrate and calories which makes it more ideal component for infant formula. In terms of value, the global banana powder market is expected to reach a market value of US\$ 774.4 Mn by the end of 2027, with an anticipated CAGR of 3.9% over the forecast period. The drivers for the growth of the banana powder market include rising demand for anti-diarrheal in pharmaceutical, rise in production of bakery products using banana powder, increase in use of banana powder for baby food, banana powder is an alternative for gluten free products. India is the 2nd largest producer of fruits in the world. In case of banana, it is the largest producer. The annual world production of fruit is 370 million metric tons. Of which India contributes about 32 million metric tons which accounts for 8% of total fruit production in the world.

Reasons for Buying Our Report:

- **The report helps you to identify a profitable project for investing or diversifying into by throwing light to crucial areas like industry size, market potential of the product and reasons for investing in the product**
- **The report provides vital information on the product like it's characteristics and segmentation**
- **The report helps you market and place the product correctly by identifying the target customer group of the product**

- **The report helps you understand the viability of the project by disclosing details like machinery required, project costs and snapshot of other project financials**
- **The report provides a glimpse of government regulations applicable on the industry**
- **The report provides forecasts of key parameters which helps to anticipate the industry performance and make sound business decisions**

Our Approach:

- **Our research reports broadly cover Indian markets, present analysis, outlook and forecast for a period of five years.**
- **The market forecasts are developed on the basis of secondary research and are cross-validated through interactions with the industry players**
- **We use reliable sources of information and databases. And information from such sources is processed by us and included in the report**

Free Instant Online Project Identification and Selection Service

Our Team has simplified the process for you by providing a "Free Instant Online Project Identification & Selection" search facility to identify projects based on multiple search parameters related to project costs namely: Plant & Machinery Cost, Total Capital Investment, Cost of the project, Rate of Return% (ROR) and Break Even Point % (BEP). You can sort the projects on the basis of mentioned pointers and identify a suitable project matching your investment requisites.....[Read more](#)

NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

Our Market Survey cum Detailed Techno Economic Feasibility Report provides an insight of market in India. The report assesses the market sizing and growth of the Industry. While expanding a current business or while venturing into new business, entrepreneurs are often faced with the dilemma of zeroing in on a suitable product/line.

And before diversifying/venturing into any product, they wish to study the following aspects of the identified product:

- **Good Present/Future Demand**
- **Export-Import Market Potential**
- **Raw Material & Manpower Availability**
- **Project Costs and Payback Period**

The detailed project report covers all aspect of business, from analyzing the market, confirming availability of various necessities such as Manufacturing Plant, Detailed Project Report, Profile, Business Plan, Industry Trends, Market Research, Survey, Manufacturing Process, Machinery, Raw Materials, Feasibility Study, Investment Opportunities, Cost and Revenue, Plant Economics, Production Schedule,

Working Capital Requirement, uses and applications, Plant Layout, Project Financials, Process Flow Sheet, Cost of Project, Projected Balance Sheets, Profitability Ratios, Break Even Analysis. The DPR (Detailed Project Report) is formulated by highly accomplished and experienced consultants and the market research and analysis are supported by a panel of experts and digitalized data bank.

We at NPCS, through our reliable expertise in the project consultancy and market research field, have demystified the situation by putting forward the emerging business opportunity in India along with its business prospects.....[Read more](#)

NIIR PROJECT CONSULTANCY SERVICES

AN ISO 9001: 2015 CERTIFIED COMPANY

Who are We?

- *One of the leading reliable names in industrial world for providing the most comprehensive technical consulting services*
- *We adopt a systematic approach to provide the strong fundamental support needed for the effective delivery of services to our Clients' in India & abroad*

What do We Offer?

- *Project Identification*
- *Detailed Project Reports/Pre-feasibility Reports*
- *Business Plan*
- *Market Research Reports*
- *Technology Books and Directory*
- *Industry Trend*
- *Databases on CD-ROM*
- *Laboratory Testing Services*
- *Turnkey Project Consultancy/Solutions*
- *Entrepreneur India (An Industrial Monthly Journal)*

How are We Different ?

- *We have two decades long experience in project consultancy and market research field*
- *We empower our customers with the prerequisite know-how to take sound business decisions*
- *We help catalyze business growth by providing distinctive and profound market analysis*
- *We serve a wide array of customers , from individual entrepreneurs to Corporations and Foreign Investors*
- *We use authentic & reliable sources to ensure business precision*

Our Approach

Requirement collection

Thorough analysis of the project

Economic feasibility study of the Project

Market potential survey/research

Report Compilation

Who do we Serve?

- Public-sector Companies
- Corporates
- Government Undertakings
- Individual Entrepreneurs
- NRI's
- Foreign Investors
- Non-profit Organizations, NBFC's
- Educational Institutions
- Embassies & Consulates
- Consultancies
- Industry / trade associations

Sectors We Cover

- Ayurvedic And Herbal Medicines, Herbal Cosmetics
- Alcoholic And Non Alcoholic Beverages, Drinks
- Adhesives, Industrial Adhesive, Sealants, Glues, Gum & Resin
- Activated Carbon & Activated Charcoal
- Aluminium And Aluminium Extrusion Profiles & Sections,
- Bio-fertilizers And Biotechnology
- Breakfast Snacks And Cereal Food
- Bicycle Tyres & Tubes, Bicycle Parts, Bicycle Assembling

Sectors We Cover *Cont...*

- Bamboo And Cane Based Projects
- Building Materials And Construction Projects
- Biodegradable & Bioplastic Based Projects
- Chemicals (Organic And Inorganic)
- Confectionery, Bakery/Baking And Other Food
- Cereal Processing
- Coconut And Coconut Based Products
- Cold Storage For Fruits & Vegetables
- Coal & Coal Byproduct

Sectors We Cover *Cont...*

- Copper & Copper Based Projects
- Dairy/Milk Processing
- Disinfectants, Pesticides, Insecticides, Mosquito Repellents,
- Electrical, Electronic And Computer based Projects
- Essential Oils, Oils & Fats And Allied
- Engineering Goods
- Fibre Glass & Float Glass
- Fast Moving Consumer Goods
- Food, Bakery, Agro Processing

Sectors We Cover *Cont...*

- Fruits & Vegetables Processing
- Ferro Alloys Based Projects
- Fertilizers & Biofertilizers
- Ginger & Ginger Based Projects
- Herbs And Medicinal Cultivation And Jatropha (Biofuel)
- Hotel & Hospitality Projects
- Hospital Based Projects
- Herbal Based Projects
- Inks, Stationery And Export Industries

Sectors We Cover

Cont...

- Infrastructure Projects
- Jute & Jute Based Products
- Leather And Leather Based Projects
- Leisure & Entertainment Based Projects
- Livestock Farming Of Birds & Animals
- Minerals And Minerals
- Maize Processing(Wet Milling) & Maize Based Projects
- Medical Plastics, Disposables Plastic Syringe, Blood Bags
- Organic Farming, Neem Products Etc.

Sectors We Cover *Cont...*

- Paints, Pigments, Varnish & Lacquer
- Paper And Paper Board, Paper Recycling Projects
- Printing Inks
- Packaging Based Projects
- Perfumes, Cosmetics And Flavours
- Power Generation Based Projects & Renewable Energy Based Projects
- Pharmaceuticals And Drugs
- Plantations, Farming And Cultivations
- Plastic Film, Plastic Waste And Plastic Compounds
- Plastic, PVC, PET, HDPE, LDPE Etc.

Sectors We Cover *Cont...*

- Potato And Potato Based Projects
- Printing And Packaging
- Real Estate, Leisure And Hospitality
- Rubber And Rubber Products
- Soaps And Detergents
- Stationary Products
- Spices And Snacks Food
- Steel & Steel Products
