

Need a New Business Idea? 9 Best Industries for Starting a Business.

1. Opportunities in Manufacturing of Solar Inverter (100 KVA – 1000 KVA)
2. Azodicarbonamide Using Urea and Hydrazine Hydrate
3. Production of Printed Circuit Board (PCB) Multilayer
4. Opportunities in Drinking Water with Packaging in Aluminium Beverage Cans (Mineral, Carbonated, Alkaline)
5. Rising Demand of Rice Husk based Biodegradable Cutlery
6. Residential Apartments
7. Production Business of Ethanol from Maize
8. Hemodialysis Solution B.P. And Erillite-Bicarb (Part-B)
9. Profitable Production Business of Collagen Powder

Rich businessmen emerge from various industries across all business sizes. It's possible to get rich in an infinite number of ways. To begin with, you should select an evergreen business model to make millions, irrespective of your location and circumstances. This ensures that your selected industry and niche will never fail, and your business will continue to be needed in the near future. You also need to focus on your mental make-up to make millions, removing any potential constraints and boundaries.

You must believe in your goal to attract these millions, and you must enable yourself to reboot, even if you fail on your first try. Your entrepreneurial journey does not begin and end with a wonderful business idea. The best startup business concepts are crucial to your company's success. People nowadays are more interested in their hobbies than in their jobs. They are always on the lookout for the best new business ideas to feed their entrepreneurial spirit.

They have no desire to retire at the age of 60. They want happiness index rather than a high wage and a life in a big city. Thousands of people nowadays wish to create their own business rather than work a traditional 9 to 5 job. The bulk of people would chase two or three carriers over their working lifetimes. Working for yourself is one of the most rewarding experiences you can have. While owning a business might be difficult, it can also be satisfying because the effort you put in rewards you personally rather than anybody else

**Opportunities in
Manufacturing of**

Solar Inverter

(100 KVA– 1000 KVA)

A solar inverter, also known as a PV inverter, is an electrical converter that converts a photovoltaic (PV) solar panel's variable direct current (DC) output into a utility frequency alternating current (AC) that can be fed into a commercial electrical grid or used by a local, off-grid electrical network. In a photovoltaic system, it is a vital balance of system (BOS) component that allows the use of standard AC-powered equipment. Maximum power point tracking and anti-islanding prevention are two features that solar power converters have developed for use with photovoltaic arrays.

In the year 2020, the worldwide solar PV inverter industry will be worth almost USD 7.3 billion. Between 2021 and 2026, the solar PV inverter business is predicted to develop at a CAGR of 5%, reaching a value of over USD 9.8 billion. The market for solar PV inverters is expected to develop at an annual pace of more than 8%. Reduced electricity consumption and declining economic growth have also had a negative impact on the industry. However, when global market activity resumes, demand for the industry is increasing at a quicker rate.

Factors such as decreasing inverter prices and an increase in solar PV installations are projected to boost market growth. The growth of the solar PV inverters market has been aided by technological advancements that have led in cheaper costs and improved efficiency in solar panel manufacturing. However, a lack of general understanding, infrastructure construction costs, and recent subsidy reductions on solar panels by Governments in the Asia-Pacific region have all stifled market expansion. This is a great opportunity for anyone interested in starting a business.

“

Azodicarbonamide Using Urea and Hydrazine Hydrate

”

Azodicarbonamide is a crystalline powder that ranges in colour from yellow to orange-red and is an odourless chemical compound by nature. Injection moulding, calendaring, extrusion, coatings, slush, and rotational moulding are some of the plastics production processes that use azodicarbonamide. It is also used as a blowing agent in the foaming process to create foamed plastics. The use of foamed polymers has improved the material's strength-to-weight ratio, improved electrical and thermal insulation, and lowered material costs.

In the coming years, rising demand for foamed plastic from industries such as air filters and construction is expected to boost the use of azodicarbonamide as a blowing agent. It is used in the production of vinyl in the rubber sector (PVC). Because vinyl foam is springy and does not slip on smooth surfaces, it is utilised in carpets and floor mats. Due to increased demand for high-quality plastic and rubber parts for everyday use, the worldwide azodicarbonamide market is predicted to develop throughout the forecast period.

It has multiple applications in the chemical industry, including strengthening, softening, and adding flexibility to the substance it is mixed with. It is widely used in the manufacture of foam-based plastics, such as toys, sports shoes, shoe soles, floor mats, and so on. Azodicarbonamide is a chemical compound that has a yellow to orange red colour, is odourless, and comes in the form of a crystalline powder. It's widely utilised as a foaming agent, a blowing agent, and a food ingredient. It's mostly found in rubber and plastic items like yoga mats.

Production of

Printed Circuit Board (PCB) Multilayer

A printed circuit board (PCB) is a sandwich construction made up of conducting and insulating layers bonded together. PCBs have two distinct purposes. The initial step is to solder electronic components to specific positions on the outer layers. The second is PCB design, which is the process of creating reliable electrical connections (and also reliable open circuits) between the component's terminals in a regulated manner.

Each of the conductive layers has an artwork pattern of conductors (similar to wires on a flat surface) that enable electrical connections, while another manufacturing process adds vias, which are small and precisely positioned holes punched through the laminate and then plated with copper. Vias provide electrical communication between layers that are otherwise isolated in the laminate structure, allowing for a third dimension of connection between conductive layers in a reliable and cost-effective method for mass production of electronic goods.

Single-sided, double-sided, and multi-layer PCBs are the three types of printed circuit boards. Multi-Layer PCB is expected to expand at the quickest rate of 7.2 percent CAGR from 2021 to 2026. PCBs are frequently employed in automotive applications and come in a variety of pricing points and uses. A single-sided PCB has only one layer of conducting material on one side of the board, with the opposite side being utilized to incorporate electronic components such as integrated circuits, programmable logic controllers, electrolytic capacitors, and resistors.

Single-sided surface mount PCBs are identical to double-sided surface mount PCBs, with the exception that they feature two sided traces with a top and bottom layer. Multi-layer PCBs, which are made up of three or more copper layers bonded together, may support a high level of circuit complexity. One of the fastest growing business Printed Circuit Board (PCB) Multilayer manufacturing

Opportunities in

Drinking Water with Packaging in Aluminium Beverage Cans

(Mineral, Carbonated, Alkaline)

Drinking water, also known as potable water, is water that is safe to drink or use for food preparation. The amount of drinking water required to maintain good health varies, and depends on physical activity level, age, health-related issues, and environmental conditions. For those who work in a hot climate, up to 16 litres (4.2 US gal) a day may be required. On average, American households use 300 gallons of water a day. Typically in developed countries, tap water meets drinking water quality standards, even though only a small proportion is actually consumed or used in food preparation.

All public water suppliers in the US must uphold a certain standard of water quality. If the requirements are met, Americans can drink their local tap water. Other typical uses for tap water include washing, toilets, and irrigation. Greywater may also be used for toilets or irrigation. Its use for irrigation however may be associated with risks. Water may also be unacceptable due to levels of toxins or suspended solids. The global bottled water market was valued at USD 217.66 billion in 2020, with a compound annual growth rate (CAGR) of 11.1 percent predicted from 2021 to 2028.

The important elements driving the industry over the next few years will be portability, ease of use and installation, and low maintenance costs. Additionally, increased consumer awareness of the health benefits of drinking bottled water is expected to propel market expansion throughout the forecast period. Product sales are driven by a preference for bottled water over tap water, particularly among younger consumers. Starting your own Manufacturing business can be very profitable, especially if you understand the industry and work hard to make your business successful.

Rising Demand of

**Rice Husk based
Biodegradable Cutlery**

Biodegradable cutlery is made by compressing or injecting rice husk (agro-waste) into a matrix/resin that is made from renewable resources. Biodegradable tableware (spoon, fork, spork, bowl, khullad, plate, tea cup) can be used as an alternative to plastic tableware because natural biopolymers offer significant advantages such as degradability, biocompatibility, and biological safety when compared to plastic, which persists in the environment and poses environmental risks. The biodegradable cutlery can be used to serve both hot and cold foods (-300 C to 850 C).

In the natural environment, biodegradability is 180 days and compostability is 90 days. It is designed to suit the packaging requirements of food goods and extend the shelf life of products without affecting the environment due to their biodegradable and durable nature. Services and the general public can use biodegradable cutlery and tableware as an alternative to non-biodegradable plastics. The global biodegradable cutlery market was valued at USD 33.9 million in 2018 and is expected to rise at a high CAGR of 5.9% over the forecast period of 2019 to 2025.

Growing public awareness of the harmful effects of non-biodegradable garbage is projected to boost market growth. Non-biodegradable plastic has been banned by the government under rigorous controls. Government actions that support the industry, as well as increased consumer awareness of the negative consequences of non-biodegradables, are expected to drive growth. As a result, cutlery is made from disposable materials such as husk, wood, coconut coir, and bagasse by kitchen item makers. If you have an interest in starting a new business, one of the best options is to invest in Rice Husk based Biodegradable Cutlery Manufacturing.

The background of the slide is a photograph of a modern, multi-story apartment building. The building features a facade of dark-tinted glass windows and several balconies with white railings. The sky is a clear, light blue. The text 'Residential Apartments' is overlaid on the center of the image in a large, bold, yellow font with a red drop shadow.

Residential Apartments

An apartment, also known as a flat, is a self-contained housing unit (a type of residential real estate) that is located on the first floor of a building. These general structures go by a variety of names, as seen below. Apartment tenure also varies greatly, ranging from large-scale public housing to owner occupation within what is technically a condominium to tenants renting from a private landlord. A typical residential bungalow building has a drawing room, dining room, office, guest room, kitchen, store, pantry, dressing room, bathroom, front verandah, and stairs, among other features.

The real estate industry is one of the most well-known in the world. Housing, retail, hospitality, and business are the four subsectors. The expansion of this industry is aided by the expansion of the corporate environment, which has increased demand for office space as well as urban and semi-urban lodging. Across terms of direct, indirect, and induced effects in all sectors of the economy, the construction industry ranks third among the 14 key sectors. After agriculture, the real estate sector creates the second-highest number of jobs in India. This sector is also likely to attract greater non-resident Indian (NRI) investment, both in the short and long term.

Production Business of

Ethanol from Maize

Maize ethanol is a type of ethanol made from corn biomass, and it is the most common ethanol fuel. Ethanol fermentation and distillation are used to make corn ethanol. It's debatable if maize ethanol production and consumption emits fewer greenhouse gases than gasoline. Approximately 25% of maize acreage in the United States is used for ethanol production. Corn ethanol's future utility as a primary gasoline substitute is unknown. Because maize ethanol is far more expensive to produce than gasoline, it has yet to be demonstrated to be as cost effective as gasoline.

Before it can be utilised as a fuel source, corn ethanol must go through a lengthy grinding process. In 2019, the worldwide ethanol market was estimated at USD 89.1 billion, with a compound annual growth rate (CAGR) of 4.8 percent expected from 2020 to 2027. The increased use of the product as a biofuel is driving demand for the product. Another key aspect driving market expansion is the increased usage of alcoholic beverages.

Both natural and petrochemical feedstock can be used to make ethanol. Natural sugars are fermented in the presence of yeast in the natural process. Because of the surge in shale gas output, ethylene production is expanding. The market is projected to be overstocked with ethylene as oil output declines and new ethylene capacity comes online. This is expected to result in a halt in ethanol production. If you wish to start Ethanol from Maize Manufacturing industry then there are plenty of opportunities available here.

Haemodialysis Solution B.P. And Erilite-Bicarb (Part-B)

NIIR PROJECT CONSULTANCY SERVICES

Haemodialysis, sometimes called hemodialysis or just dialysis, is a method of cleaning a person's blood when their kidneys aren't functioning properly. When the kidneys are in a condition of renal failure, this type of dialysis achieves the extracorporeal elimination of waste products such as creatinine and urea as well as free water from the blood. One of three renal replacement therapies is hemodialysis. Apheresis is an alternate approach for extracorporeal separation of blood components like plasma or cells. Haemodialysis can be done as an outpatient or as an inpatient procedure.

Routine hemodialysis is performed in a dialysis outpatient facility, which is either a dedicated, stand-alone clinic or a purpose-built room in a hospital. Home haemodialysis is used less commonly. Dialysis treatments are launched and managed by specialised staff made up of nurses and technicians at a clinic; at home, dialysis treatments can be self-initiated and managed or done jointly with the help of a qualified helper, who is frequently a family member.

Haemodialysis is the preferred renal replacement therapy for patients who require dialysis on a short-term basis, as well as for many patients who require maintenance dialysis. It delivers efficient and quick solute removal. When hemodialysis is required, as well as the numerous parameters for dialysis treatment, a nephrologist (a medical kidney specialist) makes the decision. Frequency (how many treatments per week), length of each treatment, blood and dialysis solution flow rates, and dialyzer size are all factors to consider.

Haemodialysis can be done in a hospital, at home, or in free-standing dialysis units (also known as satellite units). Nurses and dialysis assistants assist with treatment in hospitals and satellite units; home dialysis requires you or someone else to learn how to handle the machine. Although one may feel exhausted following a dialysis session, because haemodialysis is only done three times a week, the intervening days might allow for some regular activity, however dietary and fluid restrictions are normally necessary. If you're looking for a business opportunity then Heamodialysis Solution B.P. And Erilite-Bicarb production may be your answer.

Profitable
Production
Business of

Collagen Powder

Collagen is a protein that can be found in your skin as well as the connective tissues that make up your tendons, ligaments, muscles, and other body parts. It is the body's most abundant protein. However, as you get older, your body's collagen breaks down, making it more difficult to generate more. Collagen supports the structure of your skin and strengthens your bones. It could also help with joint discomfort. Collagen powder has become a popular supplement due to its possible health advantages.

This nutritional powder is usually hydrolyzed, which means the proteins have already been broken down, which makes it easier for your body to absorb. The collagen market is expected to be worth almost USD 3.5 billion in 2018 and nearly USD 4.6 billion by 2023, with a compound annual growth rate of 5.2 percent. The market is being driven by rising demand for convenience foods and increased awareness of collagen in the medical and healthcare industries. Cultural limits imposed by the use of animal skin, on the other hand, are expected to stifle market expansion.

In addition, the product has a lot of uses in the healthcare field. The food and beverage industry is likely to play a significant role in driving gelatin and hydrolyzed collagen demand. The substance is a vital protein for humans, with numerous nutritional, dermatological, and health benefits. Concerns about disease transmission from certain raw material suppliers, on the other hand, have slowed industry expansion. The industry is governed by laws and regulations that govern the use of animal-based raw materials and ingredients in the synthesis of collagen. This presents an excellent opportunity for anyone looking to start a collagen Powder business.

Major Queries/Questions Answered in Our Report?

- 1. How has the industry performed so far and how will it perform in the coming years?**
- 2. What is the Project Feasibility of the Plant?**
- 3. What are the requirements of Working Capital for setting up the plant?**
- 4. What is the structure of the industry and who are the key/major players?**

- 5. What is the total project cost for setting up the plant?**
- 6. What are the operating costs for setting up the plant?**
- 7. What are the machinery and equipment requirements for setting up the plant?**
- 8. Who are the Suppliers and Manufacturers of Plant & Machinery for setting up the plant?**
- 9. What are the requirements of raw material for setting up the plant?**

10. Who are the Suppliers and Manufacturers of Raw materials for setting up the plant?

11. What is the Manufacturing Process of the plant?

12. What is the total size of land required for setting up the plant?

13. What will be the income and expenditures for the plant?

14. What are the Projected Balance Sheets of the plant?

15. What are the requirement of utilities and overheads for setting up the plant?

16. What is the Built up Area Requirement and cost for setting up the plant?

17. What are the Personnel (Manpower) Requirements for setting up the plant?

18. What are Statistics of Import & Export for the Industry?

19. What is the time required to break-even?

20. What is the Break-Even Analysis of the plant?

21. What are the Project financials of the plant?

22. What are the Profitability Ratios of the plant?

23. What is the Sensitivity Analysis-Price/Volume of the plant?

24. What are the Projected Pay-Back Period and IRR of the plant?

25. What is the Process Flow Sheet Diagram of the plant?

26. What are the Market Opportunities for setting up the plant?

27. What is the Market Study and Assessment for setting up the plant?

28. What is the Plant Layout for setting up the plant?

The background of the slide is a blurred photograph of a business meeting. In the center, two hands are shaking in a firm grip, symbolizing a deal or agreement. The background is light and airy, with some geometric patterns visible in the lower-left corner.

Reasons for Buying Our Project Report

- ✓ **The report helps you to identify a profitable project for investing or diversifying into by throwing light to crucial areas like industry size, market potential of the product and reasons for investing in the product**
- ✓ **This report provides vital information on the product like it's characteristics and segmentation**
- ✓ **This report helps you market and place the product correctly by identifying the target customer group of the product**

- ✓ **This report helps you understand the viability of the project by disclosing details like machinery required, project costs and snapshot of other project financials**
- ✓ **The report provides a glimpse of government regulations applicable on the industry**
- ✓ **The report provides forecasts of key parameters which helps anticipate the industry performance and make sound business decisions**

The background of the slide is a photograph of two men in business suits shaking hands. The man on the left is wearing a dark suit, and the man on the right is wearing a white shirt and a patterned tie. They are standing in front of a city skyline with several tall buildings under a clear sky. The text 'Our Approach' is overlaid on the image in a large, bold, red font with a black outline and a reflection effect below it.

Our Approach

- **Our research reports broadly cover Indian markets, present analysis, outlook and forecast for a period of five years.**
- **The market forecasts are developed on the basis of secondary research and are cross-validated through interactions with the industry players**
- **We use reliable sources of information and databases. And information from such sources is processed by us and included in the report**

Free Instant Online Project Identification and Selection Service

Our Team has simplified the process for you by providing a "Free Instant Online Project Identification & Selection" search facility to identify projects based on multiple search parameters related to project costs namely: Plant & Machinery Cost, Total Capital Investment, Cost of the project, Rate of Return% (ROR) and Break Even Point % (BEP). You can sort the projects on the basis of mentioned pointers and identify a suitable project matching your investment requisites.....[Read more](#)

NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

Our Market Survey cum Detailed Techno Economic Feasibility Report provides an insight of market in India. The report assesses the market sizing and growth of the Industry. While expanding a current business or while venturing into new business, entrepreneurs are often faced with the dilemma of zeroing in on a suitable product/line.

And before diversifying/venturing into any product, they wish to study the following aspects of the identified product:

- **Good Present/Future Demand**
- **Export-Import Market Potential**
- **Raw Material & Manpower Availability**
- **Project Costs and Payback Period**

The detailed project report covers all aspect of business, from analyzing the market, confirming availability of various necessities such as Manufacturing Plant, Detailed Project Report, Profile, Business Plan, Industry Trends, Market Research, Survey, Manufacturing Process, Machinery, Raw Materials, Feasibility Study, Investment Opportunities, Cost and Revenue, Plant Economics, Production Schedule,

Working Capital Requirement, uses and applications, Plant Layout, Project Financials, Process Flow Sheet, Cost of Project, Projected Balance Sheets, Profitability Ratios, Break Even Analysis. The DPR (Detailed Project Report) is formulated by highly accomplished and experienced consultants and the market research and analysis are supported by a panel of experts and digitalized data bank.

We at NPCS, through our reliable expertise in the project consultancy and market research field, have demystified the situation by putting forward the emerging business opportunity in India along with its business prospects.....[Read more](#)

Niir PROJECT CONSULTANCY SERVICES

AN ISO 9001 : 2015 CERTIFIED COMPANY

AN ISO 9001 : 2015 CERTIFIED COMPANY

Niir PROJECT CONSULTANCY SERVICES

Entrepreneur India

Who are we?

A trusted and leading name in the industry, we have been putting forth exceptionally integrated and comprehensive technical consultancy services. We believe that project consultancy serves as a critical element for the success of your projects. Moreover, we keep in mind that no client is the same and nor are the requirements. Therefore, we ensure uniqueness in every service you avail from us.

What do we offer?

- **Project Identification**
- **Detailed Project Reports/Pre-feasibility Reports**
- **Market Research Reports**
- **Business Plan**
- **Technology Books and Directory**
- **Industry Trend**
- **Databases on CD-ROM**
- **Laboratory Testing Services**
- **Turnkey Project Consultancy/Solutions**
- **Entrepreneur India (An Industrial Monthly Journal)**

How are we different ?

- We have two decades long experience in project consultancy and market research field
- We empower our customers with the prerequisite know-how to take sound business decisions
- We help catalyze business growth by providing distinctive and profound market analysis
- We serve a wide array of customers , from individual entrepreneurs to Corporations and Foreign Investors
- We use authentic & reliable sources to ensure business precision

Our Approach

Requirement collection

Thorough analysis of the project

Economic feasibility study of the Project

Market potential survey/research

Report Compilation

Who do we Serve?

- Public-sector Companies
- Corporates
- Government Undertakings
- Individual Entrepreneurs
- NRI's
- Foreign Investors
- Non-profit Organizations, NBFC's
- Educational Institutions
- Embassies & Consulates
- Consultancies
- Industry / trade associations

Sectors We Cover

- Ayurvedic And Herbal Medicines, Herbal Cosmetics
- Alcoholic And Non Alcoholic Beverages, Drinks
- Adhesives, Industrial Adhesive, Sealants, Glues, Gum & Resin
- Activated Carbon & Activated Charcoal
- Aluminium And Aluminium Extrusion Profiles & Sections,
- Bio-fertilizers And Biotechnology
- Breakfast Snacks And Cereal Food
- Bicycle Tyres & Tubes, Bicycle Parts, Bicycle Assembling

Sectors We Cover *Cont...*

- Bamboo And Cane Based Projects
- Building Materials And Construction Projects
- Biodegradable & Bioplastic Based Projects
- Chemicals (Organic And Inorganic)
- Confectionery, Bakery/Baking And Other Food
- Cereal Processing
- Coconut And Coconut Based Products
- Cold Storage For Fruits & Vegetables
- Coal & Coal Byproduct

Sectors We Cover *Cont...*

- Copper & Copper Based Projects
- Dairy/Milk Processing
- Disinfectants, Pesticides, Insecticides, Mosquito Repellents,
- Electrical, Electronic And Computer based Projects
- Essential Oils, Oils & Fats And Allied
- Engineering Goods
- Fibre Glass & Float Glass
- Fast Moving Consumer Goods
- Food, Bakery, Agro Processing

Sectors We Cover *Cont...*

- Fruits & Vegetables Processing
- Ferro Alloys Based Projects
- Fertilizers & Biofertilizers
- Ginger & Ginger Based Projects
- Herbs And Medicinal Cultivation And Jatropha (Biofuel)
- Hotel & Hospitality Projects
- Hospital Based Projects
- Herbal Based Projects
- Inks, Stationery And Export Industries

Sectors We Cover *Cont...*

- Infrastructure Projects
- Jute & Jute Based Products
- Leather And Leather Based Projects
- Leisure & Entertainment Based Projects
- Livestock Farming Of Birds & Animals
- Minerals And Minerals
- Maize Processing(Wet Milling) & Maize Based Projects
- Medical Plastics, Disposables Plastic Syringe, Blood Bags
- Organic Farming, Neem Products Etc.

Sectors We Cover *Cont...*

- Paints, Pigments, Varnish & Lacquer
- Paper And Paper Board, Paper Recycling Projects
- Printing Inks
- Packaging Based Projects
- Perfumes, Cosmetics And Flavours
- Power Generation Based Projects & Renewable Energy Based Projects
- Pharmaceuticals And Drugs
- Plantations, Farming And Cultivations
- Plastic Film, Plastic Waste And Plastic Compounds
- Plastic, PVC, PET, HDPE, LDPE Etc.

Sectors We Cover *Cont...*

- Potato And Potato Based Projects
- Printing And Packaging
- Real Estate, Leisure And Hospitality
- Rubber And Rubber Products
- Soaps And Detergents
- Stationary Products
- Spices And Snacks Food
- Steel & Steel Products
- Textile Auxiliary And Chemicals

Sectors We Cover *Cont...*

- Township & Residential Complex
- Textiles And Readymade Garments
- Waste Management & Recycling
- Wood & Wood Products
- Water Industry(Packaged Drinking Water & Mineral Water)
- Wire & Cable

Objective

- To get a detailed scenario of the industry along with its structure and classification
- To provide a comprehensive analysis of the industry by covering aspects like:
 - Growth drivers of the industry
 - Latest market trends
 - Insights on regulatory framework
 - SWOT Analysis
 - Demand-Supply Situation
 - Foreign Trade
 - Porters 5 Forces Analysis

Objective

- To provide forecasts of key parameters which helps to anticipate the industry performance
- To help chart growth trajectory of a business by detailing the factors that affect the industry growth
- To help an entrepreneur/manager in keeping abreast with the changes in the industry
- To evaluate the competitive landscape of the industry by detailing:
 - Key players with their market shares
 - Financial comparison of present players

Clientele

- Venturist/Capitalists
- Entrepreneur/Companies
- Industry Researchers
- Investment Funds
- Foreign Investors, NRI's
- Project Consultants/Chartered Accountants
- Banks
- Corporates
