About the Book

Wine is the most loved beverage across the world and a popular accompaniment with food. The popularity of wine in India has started growing rapidly. Wine is the fermented product of the grape. Because crushed grapes contain all that is needed to create wine, ancient wine producers simply allowed nature to take its course. As time went on, people realized that by intervening at certain times, they could make a wine with more predictable characteristics. Grape cultivation is one of the most remunerative farming enterprises in India. Grapes can be eaten raw or they can be used for making wine, jam, juice, jelly, vinegar. Delicate wine grapes are generally produced in frost free and moderate temperature environments. Thousands of grape varieties are grown all over the world; the wine grape varieties represent only a fraction of them. The colour, size, phenolic distribution and acidity of grapes give each wine its own characteristic. Wine quality is affected by the factors such as soil, climate, viticulture and wine making techniques. Wine quality is dictated mainly by the grapevines, not by the winemaker. Wine must be slightly aged to be drinkable. Grape production, linked with wine processing has provided the much-needed impetus for the growth of the wine industry. Indian government plays a crucial role in the current phase of Indian wine industry, supporting the current momentum amongst others through financial assistance and market protection. Gradual reduction of import duty levels will no doubt lead to increasing competition through imports, but will on the longer term result in a competitive industry that is able to export its top quality products to overseas markets.

Some of the fundamentals of the book are wine quality, mold and mold complexes associated with grapes, grape aroma components, soluble solids in winemaking, the molds and yeasts of grapes and wine molds, yeasts of grapes and wine, by-products of fermentation, chemistry of fermentation and composition of wines, outline of red wine making, stuck wines, white table wine, sparkling wine, vermouth and flavoured wines, cider and apple wine, plum wines in Europe, berry wines in pacific coast states, cherry and plum wines in pacific coast states, pomegranate wine from concord grapes, pineapple wine, pear wine, wine from oranges, grapefruit wine, wine from dried fruits, Swiss research on fruit juice fermentation honey wine (mead), etc. This book provides a complete detail on all aspects of Wine production like describe the varieties of wine available, its manufacturing process, bottling and storage of wine, quality control in wine making and many more. It is hoped that this book will be very resourceful to all its readers, students, scientists, technocrats, existing industries, new entrepreneurs and all those who are related to wine making.

Contents

1. THE COMPOSITION OF GRAPES

How Grapes Ripen

Physical Changes

Chemical Changes

Measurement of Maturity

Importance
How to Sample
Preparation of Sample
Methods of Measurement
Interpretation of Results
Harvesting and Transportation
Composition of Musts
Water
Sugars and Related Compounds
Acids
pH and Buffer Coefficient
Nitrogenous Components
Pigments
Tannin
Vitamins
Enzymes
Odorous Constituents
Metals
Environmental Factors
Temperature
Soil
Rainfall
Other Factors
Variety
White Table Wines
Red Table Wines
Pink or Rosé Wines
Dessert Wines
2. GRAPE MATURITY AND QUALITY
Wine Quality
Clones
Climate
Terroir
Vineyard Yield
Maturity Sampling
Maturity Gauges
Sugar per Berry
Sample Processing
Fruit Quality Evaluation
Mold and Mold Complexes Associated with Grapes
Factors Influencing Botrytis Growth
Sensory Considerations
Quantification of Botrytis
Processing Considerations for Botrytis
Pesticides
Sensory Considerations as an Indicator of Grape Maturity and Quality
Grape Aroma Components
Soluble Solids in Winemaking
Conversion of Sugar-to-Alcohol
Amelioration and Chaptalization
Monitoring Fermentation

Laboratory Measurements of Soluble Solids

Densimetric Procedures

Analysis

3. FRUIT QUALITY AND SOLUBLE SOLIDS

Maternity Sampling

Contribution of Juice Aroma

Color and Phenols

Grower Input

Sugar per Berry

Sample Processing

Fruit Evaluation

Application of Soluble Solids Data in Winemaking

Laboratory Measurements of Soluble Solids

Densimetric Procedures

4. THE MOLDS AND YEASTS OF GRAPES AND WINE

Molds

General Classification of Microorganisms

Molds

Penicilum

Aspergillus

Yeasts

Botanical Classification of Yeasts

Isolation and Purification of Yeasts

Spore Formation

Identification of Yeast Cultures

Yeasts of Grapes and Wine

5. ALCOHOLOMETRY

Yeast Metabolism

Fermentation

By-products of Fermentation

Ethanol Production

Determination of Alcohol Content

Physical Methods

Chemical Methods for Alcohol Determination

6. CHEMISTRY OF FERMENTATION AND COMPOSITION OF WINES

NIIR PROJECT CONSULTANCY SERVICES (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

Our various services are: Detailed Project Report, Business Plan for Manufacturing Plant, Start-up Ideas, Business Ideas for Entrepreneurs, Market Research, Manufacturing Process, Machinery, Raw Materials, Project Feasibility, Investment Opportunities, Technical Consultancy and Startup Help.

NPCS also publishes process technology books, technical books, startup books, directory, business database, detailed project reports and market research reports.

Our Detailed Project Report aims at providing all the critical data required by entrepreneurs for starting new business ventures.
