

Confectionery Products Handbook (Chocolate, Toffees, Chewing Gum & Sugar Free Confectionery)

Author: NPCS Board of Food Technologists

Format: paperback

Code: NI254

Pages: 672

Price: Rs 1975 | US\$ 200

Publisher: NIIR PROJECT CONSULTANCY SERVICES

Shipping: 5 days

About the Book

Confectionery manufacture has been dominated by large scale industrial processing for several decades. Confectionery implies the food items that are rich in sugar and often referred to as a confection and refers to the art of creating sugar based dessert forms, or subtleties (subtlety or sotelty), often with pastillage. The simplest and earliest confection used by man was honey, dating back over 3000 years ago. Traditional confectionery goes back to ancient times, and continued to be eaten through the Middle Ages into the modern era.

Sugar confectionery has developed around the properties of one ingredient – Sucrose. It is a non- reducing disaccharide. The principal ingredient in all confectionery is sucrose, which in its refined form has little flavour apart from its inherent sweetness.

This handbook contains Packaging in the confectionery industry, Structure of sugar confectionery, Flavouring of confectionery, Confectionery plant, Ingredients, Quality control and chemical analysis, Medicated confectionery and chewing Gum, Chocolate flow properties, General technical aspects of industrial sugar confectionery manufacture, Manufacture of liquorice paste, Extrusion cooking technology, Manufacture of invert sugar, Marzipan and crystallized confectionery.

The manufacture of confectionery is not a science based industry, as these products have traditionally been created by skilled confectioners working empirically. The aim of this handbook is to give the reader a perspective on several processes and techniques which are generally followed in the confectionery industry. The texture and technological properties of confectionery products are to a large extent controlled by its structure.

The book is aimed for food engineers, scientists, technologists in research and industry, as well as for new entrepreneurs and those who are engaged in this industry.

Contents

1. INTRODUCTION

History

Raw materials

1. Physical and chemical properties

2. Sweetening ingredients

3. Other raw materials

Properties and microbiology of confectionery

Types of confectionery

Process and Machinery for confectionery production

Modern developments

Production of typical confectionery products

Fondant

Production of fondant

Casting fondant articles

Figure 1. Baker - Perkins fondant machine

Figure 2. NID high speed mogul molder

Caramel, fudge, and toffee

Formation of caramel bars and small units

Boiled sweets, hard candy, brittle, croquante, and butterscotch

Marshmallows and nougat

Jellies, gums, and turkish delight

Panning

Other products

Packaging, storage, and economic aspects

2. PACKAGING IN THE CONFECTIONERY INDUSTRY

Trends and developments

The purpose of a package

The container

Materials

Metal cans

Paper and associated materials

Types of paper

Metal foil

Transparent films

Metallized films

Shrink and stretch films

Laminates

Selection and use of wrapping materials for chocolate and confectionery

The machinery

The type of wrap

Physical properties of wrapping materials-testing methods

Strength

Permeability

Physical structure

Printing odors in food wrappers

Testing of wrappers for various other properties

Resistance of printing ink and varnish to tropical conditions

Toxicity

Wrapping materials in display and advertising

Testing of wrapping and advertising material for fading

Adhesives

Physical properties of adhesives

Adhesive groups

Mechanical sealing methods

Adhesive tapes

Metal containers

Types of cans

Built-up body

Dessicant pouches

3. SUGAR, SYRUP, CONFECTIONERY AND SWEETENERS

Introduction

Composition

The production of beet sugar

The production process for beet sugar

The production of cane sugar

The production process for cane sugar

Kinds of sugar

Kinds of syrups

Confectionery, liquorice and wine gums

Confectionery

Liquorice

Wine gums and soft gums

Sweeteners

The energy-supplying sweeteners

Saccharides

Polyalcohols

Non-nutritive sweeteners

Quality deterioration, spoilage and storage

4. FOOD VALUE OF CHOCOLATE AND CONFECTIONERY

Food value and the composition of foods

Carbohydrates

Fats

Proteins

Mineral matter

Vitamins

The Labeling of Foods Containing Vitamins

Food values of chocolate and confectionery

Calculation of caloric value of a food

Supposed harmful effects of confectionery

The virtues of confectionery

5. STRUCTURE OF SUGAR CONFECTIONERY

Introduction

Toffee

Starch gels

Pectin gels

Gelatin gels

Other protein gels

Boiled sweets and pulled sweets

Panned sweets and coatings

Chocolate-flavoured couvertures

Concluding comments

6. LIQUORICE PASTE, CREAM PASTE AND

AERATED CONFECTIONERY

7.

Liquorice paste: introduction

Liquorice paste: ingredients

1. Treacle
2. Wheat flour
3. Liquorice extract
4. Caramel
5. Rework

(The manufacture of liquorice paste)

1. Premixing
2. Cooking
3. Extrusion

Cream pastes: introduction

Cream pastes : ingredients

The manufacture of cream paste

The extrusion of cream paste

Liquorice allsorts

Aerated confectionery: introduction

Methods of aeration

1. Mechanical aeration
2. Chemical aeration

Marshmallow

1. Batch marshmallow
2. Continuous marshmallow

Nougat

CHEMISTRY OF FLAVOUR DEVELOPMENT

IN CHOCOLATE

Introduction

Fermentation

Drying

Roasting

1. An introduction to browning reactions

2. A closer look at browning reactions

Conching

Conclusion

8. CONFECTIONERY COATINGS, CHOCOLATE
REPLACERS, DIETETIC COMPOUNDS

Confectionery coatings

Ingredients

Manufacturing processes

Conditions to be observed during production

Colored coatings and pastel coatings

Formulations

Dietetic coatings

Diabetic chocolate

Carob coatings

Defatted wheat germ

Medicated chocolates

9. CHOCOLATE BARS AND COVERED

CONFECTIONERY

Production methods

Molding

Enrobing

Panning

Tempering

Other chocolate processes

Chocolate drops (chips)

Roller depositing

Aerated chocolate

Chocolate flake or bark

Chocolate vermicelli or streusel

Laminated chocolate

Chocolate tempering

Compound coatings

Measurement of degree of temper

Chocolate molding

Molding chocolate blocks or bars

Hollow goods

Foiled articles

Shell forming equipment

The westal SCB process

Composition of chocolate for molding

molding and shell plant coolers

Tablets

Shells

Good manufacturing practice

Chocolate enrobing

Mechanical

Chocolate cooling

Enrober coolers

Automatic enrober systems

Chocolate enrobing problems

Chocolate panning

Zein glazes

10. CONFECTIONERY AND EXTRUSION

COOKING TECHNOLOGY

Introduction

Problem description

Currently realised extrusion cooking processes

Extrusion of starch

Extrusion of dry sucrose crystals

Extrusion of sucrose-starch mixtures

Extrusion of sucrose-syrup mixtures

Coextrusion

1. Die design

2. Size restrictions

3. Recipe restrictions

4. Density influence

5. Centre pumping
6. Post-processing
7. Cutting
8. Process economics

11. SUGAR CONFECTIONERY IN THE DIET

Confectionery in society

Confectionery as food

Energy

Nutrients

1. Carbohydrates

- 1.1 Starch

- 1.2 Sugars

2. Fats

3. Protein

4. Vitamins

5. Minerals

What food does: how it provides energy, growth and maintenance

1. Confectionery as part of a healthy diet

2. Nutritional content of sugar confectionery

Nutrition labelling

1. Calculated nutritional data

2. Analysed nutritional data

3. Which nutrients are needed?

4. Development of nutritional content

Labelling sugar confectionery

Confectionery and the critics

1. Obesity

2. Additives

3. Hyperactivity or hyperkinesis

4. Dental caries

5. Other criticisms

Conclusion

12. THE FLAVOURING OF CONFECTIONERY

Introduction

Basic confectionery types, recipes, inherent flavours

2. Fat boilings

3. Toffees and caramels

4. Fudge

5. Fondant

6. Candy

7. Cream and lozenge paste

8. Compressed tablets

9. Jellies and gums

10. Chewing gum

11. Panned work

12. Chocolate

Flavours from ingredients

Flavours developed during processing

Selection of flavourings

13. EMULSIFIERS, COLOURS AND FLAVOURS

Emulsifiers

Sources of emulsifiers

Legislation

Examples of emulsifiers

Lecithin

Sucrose esters, E473

Uses of emulsifiers in sugar confectionery

Colours

Technical Requirements of colours in sugar confectionery

Synthetic colours

Lake colours

Interference colours

Natural colours

Caramel, E150

Chlorophyll, E140

Copper chlorophyll, E141

Cochineal, E120

Roboflavin, E101

Riboflavin-5-phosphate, E101a

Carbon black, E1 53

Curcumin, E100

Crocin

Carotenoids

?-Carotene, E160(a)

Annatto, E160(b)

Lutein, E161(b)

Betalaines

Anthocyanins

Flavours

Natural flavours

The image of natural products

Nature-identical flavourings

The case of nature-identical flavours

Synthetic flavours

Dosing

Development in flavours

Antioxidants

Synthetic antioxidants

Tocopherols

14. CONFECTIONERY PLANT

Confectionery plant

Steam injection cooking

Vacuum cooking

Continuous plant

15. INGREDIENTS

Ingredients

Molasses and treacle

Invert sugar

Glucose syrup (corn syrup)

Fructose

Dextrose

Lactose

Dairy ingredients

Sweetened condensed milk

Evaporated milk (unsweetened condensed milk)

Milk powder

Butter

Butter oil (anhydrous milk fat)

Whey

Vegetable fats

Gums and gelling agents or hydrocolloids

Agar agar, E406

Alginates, E401

Carrageenan

Gelatine

Gellan gum, E418

Gum acacia, also known as gum arabic, E414

Guar gum

Pectin

Starch

The cooking of starch

Obtaining different properties in the starch

The use of starch in confectionery

Thin boiling starches

Pre-gelatinised starches

Oxidised starches

Non-gelling starches

Gum tragacanth, E413

Locust bean or carob bean gum

Xanthan gum

Egg albumen

Practical forms of egg albumen

Properties of egg albumen

Testing egg albumen

Substitutes for egg albumen

Chewing gum ingredients

Chicle

Jelutong

16. CHEWING GUM

Gum base characteristics

Texturisers

Antioxidants

Sugars

Dextrose

5. Density
Conclusion

NIIR PROJECT CONSULTANCY SERVICES (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

Our various services are: Detailed Project Report, Business Plan for Manufacturing Plant, Start-up Ideas, Business Ideas for Entrepreneurs, Market Research, Manufacturing Process, Machinery, Raw Materials, Project Feasibility, Investment Opportunities, Technical Consultancy and Startup Help.

NPCS also publishes process technology books, technical books, startup books, directory, business database, detailed project reports and market research reports.

Our Detailed Project Report aims at providing all the critical data required by entrepreneurs for starting new business ventures.
