

Confectionery Products Handbook(Chocolate, Toffees, Chewing Gum & Sugar Free Confectionery)

Author:- NPCS Board of Food Technologists

Format: paperback

Code: NI254

Pages: 672

Price: Rs.1975US\$ 52.95

Publisher: NIIR PROJECT CONSULTANCY SERVICES

Usually ships within **5** days

Confectionery manufacture has been dominated by large scale industrial processing for several decades. Confectionery implies the food items that are rich in sugar and often referred to as a confection and refers to the art of creating sugar based dessert forms, or subtleties (subtlety or sotelty), often with pastillage. The simplest and earliest confection used by man was honey, dating back over 3000 years ago. Traditional confectionery goes back to ancient times, and continued to be eaten through the Middle Ages into the modern era.

Sugar confectionery has developed around the properties of one ingredient – Sucrose. It is a non-reducing disaccharide. The principal ingredient in all confectionery is sucrose, which in its refined form has little flavour apart from its inherent sweetness.

This handbook contains Packaging in the confectionery industry, Structure of sugar confectionery, Flavouring of confectionery, Confectionery plant, Ingredients, Quality control and chemical analysis, Medicated confectionery and chewing Gum, Chocolate flow properties, General technical aspects of industrial sugar confectionery manufacture, Manufacture of liquorice paste, Extrusion cooking technology, Manufacture of invert sugar, Marzipan and crystallized confectionery.

The manufacture of confectionery is not a science based industry, as these products have traditionally been created by skilled confectioners working empirically. The aim of this handbook is to give the reader a perspective on several processes and techniques which are generally followed in the confectionery industry. The texture and technological properties of confectionery products are to a large extent controlled by its structure.

The book is aimed for food engineers, scientists, technologists in research and industry, as well as for new entrepreneurs and those who are engaged in this industry.

1. INTRODUCTION

History

Raw materials

1. Physical and chemical properties

2. Sweetening ingredients

3. Other raw materials

Properties and microbiology of confectionery

Types of confectionery

Process and Machinery for confectionery production

Modern developments

Production of typical confectionery products

Fondant

Production of fondant

Casting fondant articles

Figure 1. Baker - Perkins fondant machine

Figure 2. NID high speed mogul molder

Caramel, fudge, and toffee

Formation of caramel bars and small units

Boiled sweets, hard candy, brittle, croquante,
and butterscotch

Marshmallows and nougat

Jellies, gums, and turkish delight

Panning

Other products

Packaging, storage, and economic aspects

2. PACKAGING IN THE CONFECTIONERY INDUSTRY

Trends and developments

The purpose of a package

The container

Materials

Metal cans

Paper and associated materials

Types of paper

Metal foil

Transparent films

Metallized films

Shrink and stretch films

Laminates

Selection and use of wrapping materials for
chocolate and confectionery

The machinery

The type of wrap

Physical properties of wrapping materials-testing methods

Strength

Permeability

Physical structure

Printing odors in food wrappers

Testing of wrappers for various other properties

Resistance of printing ink and varnish to tropical conditions

Toxicity

Wrapping materials in display and advertising

Testing of wrapping and advertising material for fading

Adhesives

Physical properties of adhesives

Adhesive groups

Mechanical sealing methods

Adhesive tapes

Metal containers

Types of cans

Built-up body

Dessicant pouches

3. SUGAR, SYRUP, CONFECTIONERY AND SWEETENERS

Introduction

Composition

The production of beet sugar

The production process for beet sugar
The production of cane sugar

The production process for cane sugar
Kinds of sugar
Kinds of syrups
Confectionery, liquorice and wine gums
Confectionery
Liquorice
Wine gums and soft gums
Sweeteners

The energy-supplying sweeteners

Saccharides

Polyalcohols

Non-nutritive sweeteners

Quality deterioration, spoilage and storage

4. FOOD VALUE OF CHOCOLATE AND CONFECTIONERY

Food value and the composition of foods

Carbohydrates

Fats

Proteins

Mineral matter

Vitamins

The Labeling of Foods Containing Vitamins

Food values of chocolate and confectionery

Calculation of caloric value of a food

Supposed harmful effects of confectionery

The virtues of confectionery

5. STRUCTURE OF SUGAR CONFECTIONERY

Introduction

Toffee

Starch gels

Pectin gels

Gelatin gels

Other protein gels

Boiled sweets and pulled sweets

Panned sweets and coatings

Chocolate-flavoured couvertures

Concluding comments

6. LIQUORICE PASTE, CREAM PASTE AND AERATED CONFECTIONERY

7.

Liquorice paste: introduction

Liquorice paste: ingredients

1. Treacle

2. Wheat flour

3. Liquorice extract

4. Caramel

5. Rework

(The manufacture of liquorice paste)

1. Premixing
2. Cooking
3. Extrusion

Cream pastes: introduction

Cream pastes : ingredients

The manufacture of cream paste

The extrusion of cream paste

Liquorice allsorts

Aerated confectionery: introduction

Methods of aeration

1. Mechanical aeration
2. Chemical aeration

Marshmallow

1. Batch marshmallow
2. Continuous marshmallow

Nougat

CHEMISTRY OF FLAVOUR DEVELOPMENT IN CHOCOLATE

Introduction

Fermentation

Drying

Roasting

1. An introduction to browning reactions

2. A closer look at browning reactions

Conching

Conclusion

8. CONFECTIONERY COATINGS, CHOCOLATE REPLACERS, DIETETIC COMPOUNDS

Confectionery coatings

Ingredients

Manufacturing processes

Conditions to be observed during production

Colored coatings and pastel coatings

Formulations

Dietetic coatings

Diabetic chocolate

Carob coatings

Defatted wheat germ

Medicated chocolates

9. CHOCOLATE BARS AND COVERED CONFECTIONERY

Production methods

Molding

Enrobing

Panning

Tempering

Other chocolate processes

Chocolate drops (chips)

Roller depositing

Aerated chocolate

Chocolate flake or bark
Chocolate vermicelli or streusel
Laminated chocolate
Chocolate tempering
Compound coatings
Measurement of degree of temper
Chocolate molding
Molding chocolate blocks or bars

Hollow goods
Foiled articles
Shell forming equipment
The westal SCB process
Composition of chocolate for molding
molding and shell plant coolers
Tablets
Shells
Good manufacturing practice
Chocolate enrobing
Mechanical
Chocolate cooling
Enrober coolers
Automatic enrober systems
Chocolate enrobing problems
Chocolate panning
Zein glazes

10. CONFECTIONERY AND EXTRUSION COOKING TECHNOLOGY

Introduction
Problem description
Currently realised extrusion cooking processes
Extrusion of starch
Extrusion of dry sucrose crystals
Extrusion of sucrose-starch mixtures
Extrusion of sucrose-syrup mixtures
Coextrusion
1. Die design
2. Size restrictions
3. Recipe restrictions
4. Density influence
5. Centre pumping
6. Post-processing
7. Cutting
8. Process economics

11. SUGAR CONFECTIONERY IN THE DIET

Confectionery in society
Confectionery as food
Energy
Nutrients
1. Carbohydrates

- 1.1 Starch
- 1.2 Sugars
2. Fats
3. Protein
4. Vitamins
5. Minerals

What food does: how it provides energy, growth and maintenance

1. Confectionery as part of a healthy diet
2. Nutritional content of sugar confectionery

Nutrition labelling

1. Calculated nutritional data
2. Analysed nutritional data
3. Which nutrients are needed?
4. Development of nutritional content

Labelling sugar confectionery

Confectionery and the critics

1. Obesity
2. Additives
3. Hyperactivity or hyperkinesis
4. Dental caries
5. Other criticisms

Conclusion

12. THE FLAVOURING OF CONFECTIONERY

Introduction

Basic confectionery types, recipes, inherent flavours

2. Fat boilings
3. Toffees and caramels
4. Fudge

5. Fondant
6. Candy
7. Cream and lozenge paste
8. Compressed tablets
9. Jellies and gums
10. Chewing gum
11. Panned work
12. Chocolate

Flavours from ingredients

Flavours developed during processing

Selection of flavourings

13. EMULSIFIERS, COLOURS AND FLAVOURS

Emulsifiers

Sources of emulsifiers

Legislation

Examples of emulsifiers

Lecithin

Sucrose esters, E473

Uses of emulsifiers in sugar confectionery

Colours

Technical Requirements of colours in sugar confectionery

Synthetic colours

Lake colours
Interference colours
Natural colours
Caramel, E150
Chlorophyll, E140
Copper chlorophyll, E141
Cochineal, E120
Riboflavin, E101
Riboflavin-5-phosphate, E101a
Carbon black, E153
Curcumin, E100
Crocin
Carotenoids

?-Carotene, E160(a)
Annatto, E160(b)
Lutein, E161(b)
Betalaines
Anthocyanins
Flavours
Natural flavours
The image of natural products
Nature-identical flavourings
The case of nature-identical flavours
Synthetic flavours
Dosing
Development in flavours
Antioxidants
Synthetic antioxidants
Tocopherols

14. CONFECTIONERY PLANT

Confectionery plant
Steam injection cooking
Vacuum cooking
Continuous plant

15. INGREDIENTS

Ingredients
Molasses and treacle
Invert sugar
Glucose syrup (corn syrup)
Fructose
Dextrose
Lactose
Dairy ingredients
Sweetened condensed milk
Evaporated milk (unsweetened condensed milk)
Milk powder
Butter

Butter oil (anhydrous milk fat)
Whey
Vegetable fats

Gums and gelling agents or hydrocolloids
Agar agar, E406
Alginates, E401
Carrageenan
Gelatin
Gellan gum, E418
Gum acacia, also known as gum arabic, E414
Guar gum
Pectin
Starch
The cooking of starch
Obtaining different properties in the starch
The use of starch in confectionery
Thin boiling starches
Pre-gelatinised starches
Oxidised starches
Non-gelling starches
Gum tragacanth, E413
Locust bean or carob bean gum
Xanthan gum
Egg albumen
Practical forms of egg albumen
Properties of egg albumen
Testing egg albumen
Substitutes for egg albumen
Chewing gum ingredients
Chicle
Jelutong
16. CHEWING GUM
Gum base characteristics
Texturisers

Antioxidants

Sugars

Dextrose

Glucose syrup

Loss or gain of moisture

Flavours

17. TRADITIONAL CHOCOLATE MAKING 334-338

History

Outline of process

1. Preparation of cocoa nib - flavour development

2. Grinding-particle size reduction

3. Conching—flavour and texture development

18. SUGAR-FREE CONFECTIONERY 339-350

Laxative effects

The sugar substitutes

Bulk sweeteners - the polyols

Maltitol

Erythritol

Isomalt

Polydextrose

Intense sweeteners

Aspartame
Acesulfame K
Saccharin
Stevioside
Thaumatococin
Neohesperidine dihydrochalcone (NHDC)
Sucralose
Synergy
The Chemistry of sweetness
Making sugar-free products
Reducing the energy content
Sugar-free products
Chewing gum
Boiled sweets

The problems of making sugar-free high boilings
from isomalt

Gums and jellies

Turkish delight

Toffee

Controlled calorie products

19. QUALITY CONTROL AND CHEMICAL ANALYSIS

Introduction

Designer quality

Control of raw materials and packaging

1. Receipt of materials

2. Sampling

3. Testing

Process control

Finished packs

Sensory evaluation

Hygiene

1. Microbiological testing

2. Foreign matter

Legislation

Chemicals analysis

1. Laboratory practice

2. Sugar analysis

3. Moisture content

4. Protein

5. Fat analysis

6. Aflatoxins

7. Viscosity

8. Particle size

9. Acid content

Modern methods

Conclusion

20. MEDICATED CONFECTIONERY AND CHEWING GUM

Medicated sugar confectionery

High boiled sugar medicated confectionery

Third ingredient addition
Continuous operations
Depositing high boilings
The 'Apollo' centre-filling line from Euromec
The centre-filler hopper and pump unit
Bosch
Salvage
Chewy medicated confections
Gum products
Chewing gum
Packaging
Concluding remarks

21. CHOCOLATE FLOW PROPERTIES

Flow behaviour of chocolate
How to measure flow properties
1. Rotational viscometers
Miscellaneous instruments
Factors affecting the flow properties of chocolate
1. Fat content
2. Lecithin and other emulsifiers
3. Moisture content
4. Particle size distribution
5. Temperature
6. Conching time
7. Temper
8. Thixotropy
9. Vibration
Conclusions

22. GENERAL TECHNICAL ASPECTS OF INDUSTRIAL SUGAR CONFECTIONERY MANUFACTURE

Introduction
Compositional effects
1. Sugars
2. Fats
3. Thickeners and stabilisers

4. Proteins
Change of composition
1. Caramelisation
2. Inversion
3. Maillard reaction
4. Secondary reactions
Change of state

1. Crystallisation
2. Polymorphism
3. Starch
4. Enzymic changes
Environmental behaviour
Evaporation
Sweetness and taste

23. CARAMEL TOFFEE AND FUDGE

Introduction

Ingredients

1. Sugar
2. Glucose syrup
3. Milk protein
4. Fat
5. Salt
6. Water
7. Other additives

Structure of toffee

Formulation

Processing

1. Equipment
2. Slab process
3. Cut and wrap process
4. Depositing

Toffee texture

Fudge

24. TOFFEES AND CARMELS

Cooking toffees

A typical toffee

Sugar

Glucose syrup 42 DE

Condensed milk

Fat

Optional ingredients

Whey powder

Hydrolysed whey syrup

Invert sugar syrup

Brown sugar

Golden syrup

Emulsifiers

Glucose syrup 68 DE or higher

Isomerised glucose, also known as isoglucose or

High fructose corn syrup

Salt

Flavours and flavourings

Colour

The process

Dissolving

Emulsifying

Cooking

Shaping the toffee

The slab process

Cut and wrap process

Depositing

Toffee as an ingredient of other products

Formulation considerations

Toffee in a chocolate-coated countline

Toffee in a moulded chocolate product

25. CHOCOLATE TEMPER

Introduction

Techniques

Polymorphic transitions of triglycerides

Liquid state

Crystallization

The β -form

The β' -forms

The γ -form

The $\beta_1 \rightarrow \beta$ transition

Triple chain length structures

Cocoa butter

The crystallization of mixtures

26. TABLETS, LOZENGES AND SUGAR PANNING

Introduction

Tableting

Granulation

1. Wet granulation

2. Fluidised bed granulation

3. 'Slugging'

Ingredients

1. Base materials

2. Binders

3. Lubricants

4. Disintegrants

5. Colours and flavours

Compression

1. Bonding during compression

Problem solving

1. Capping

2. Sticking and picking

3. Pitting

4. Mottling

5. Size and weight variation

Lozenges

1. Composition

2. Processing

3. Drying

Sugar panning

1. Equipment

2. Automatic panning systems

3. Auxillary equipment

Hard panning

1. Pretreatment of centres

2. Engrossing

3. Non-pareils (hundreds-and-thousands)

Soft panning

Flavour and colour

1. Flavour
2. Colour

Polishing
Additional panning techniques

1. Alternative sweeteners
2. Silvering

27. SUGAR CONFECTIONERY, CHOCOLATE,
JAMS AND JELLIES

Agar-agar
Anti-tailing devices
Automatic continuous sugar cooker
Non-vacuum cooker
Batch roller
Cacao
Cacao butter
Cacao moth
Cacao selection
Caramel
Chocolate-confectionery research
Clayed cacao
Colours for confectionery

1. Selection of colouring matter
2. Method of dissolving
3. Concentration and purity

Conches
Circular or rotary conches
The theory of conching
Confectioners' glucose
Continuous vacuum sugar cookers
Cream beaters

1. The beater should be kept cool.
2. The syrup should be kept in the beater sufficiently long to ensure complete crystallisation.

Air-cooled cream beaters
Cream and fondant making plant
Dextrose
Diabetic foods - chocolate
Dragee pans
Egg albumen
Enrobers
Automatic temperature control
Fermentation of cacao beans
Flavourings
Classification of flavouring materials
Fondant paste
Fumigation with ethylene oxide
Gas fires for sugar boiling
Half-coating device
Heat penetration of cacao

Invert sugar
Use in confectionery
Manufacture of invert sugar
Jam manufacture - scientific principles
Pectin
Sugar
Acidity
End point of boil
Statutory regulations
Standard for jam

Standard for marmalade
General
Technique of manufacture
Fruit preparation
Preparation of juice for "jelly" jams
Preparation of recipes
Boiling
Cooling, filling and capping
Storage
Jelly crystals
Jelly manufacture
Gelatin testing
Proportions of ingredients
Boiling and mixing
(1) preparation of gelatin
(2) preparation of the sugar syrup
(3) mixing and dissolving
Choice of colour
Clarification
Cooling and setting
Cutting
Packaging
Production control
Lactic acid
Lecithin
Lemon curd
Liquid sugar/liquid glucose mixtures
Liquorice
Liquorice products
Machines for the manufacture of

Colour

Texture

Shelf life

Graining

Raw materials

Manufacture

Wrapping and packing

Vacuum pans

Vertical mixers

Winnower

28. CENTERS, FONDANTS, MARZIPAN AND
CRYSTALLIZED CONFECTIONERY

Introduction

Recipes

Cremes

3. Fudge

Marzipan

Variables affecting the properties of fondant

Moisture content

The amount of sugar crystals present

The concentration and viscosity of the syrup phase

Crystal size of the sugar

Basic steps in making the confections

Fondant

Crème making

Fudge making

Marzipan

Uses of fondant

Making impression in starch

Uses of fudges and marzipan

Quality control in fondant cremes, fudges and marzipan

1. Moisture content

2. Soluble solids of the syrup phase

3. Sugar crystal size

4 Fat content

5. Density

Conclusion

About NIIR

NIIR PROJECT CONSULTANCY SERVICES (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

Our various services are: Detailed Project Report, Business Plan for Manufacturing Plant, Start-up Ideas, Business Ideas for Entrepreneurs, Start up Business Opportunities, entrepreneurship projects, Successful Business Plan, Industry Trends, Market Research, Manufacturing Process, Machinery, Raw Materials, project report, Cost and Revenue, Pre-feasibility study for Profitable Manufacturing Business, Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Business Opportunities, Investment Opportunities for Most Profitable Business in India, Manufacturing Business Ideas, Preparation of Project Profile, Pre-Investment and Pre-Feasibility Study, Market Research Study, Preparation of Techno-Economic Feasibility Report, Identification and Section of Plant, Process, Equipment, General Guidance, Startup Help, Technical and Commercial Counseling for setting up new industrial project and Most Profitable Small Scale Business.

NPCS also publishes various process technology, technical, reference, self employment and startup books, directory, business and industry database, bankable detailed project report, market research report on various industries, small scale industry and profit making business. Besides being used by manufacturers, industrialists and entrepreneurs, our publications are also used by professionals including project engineers, information services bureau, consultants and project consultancy firms as one of the input in their research.

Our Detailed Project report aims at providing all the critical data required by any entrepreneur

ving to venture into Project. While expanding a current business or while venturing into new business, entrepreneurs are often faced with the dilemma of zeroing in on a suitable product/line.
