

# The Complete Technology Book on Industrial Polymers, Additives, Colourants and Fillers

**Author:** NIIR Board of Consultants & Engineers

**Format:** paperback

**Code:** NI180

**Pages:** 512

**Price:** Rs 1100 | US\$ 125

**Publisher:** NIIR PROJECT CONSULTANCY SERVICES

**Shipping:** 5 days

## About the Book

The Indian plastic and polymer industry has taken great strides. In the last few decades, the industry has grown to the status of a leading sector in the country with a sizable base. The material is gaining notable importance in different spheres of activity and the per capita consumption is increasing at a fast pace. Numerous plastics and fibers are produced from synthetic polymers; containers from propylene, coating materials from PVC, packaging film from polyethylene, experimental apparatus from Teflon, stockings from nylon fiber, there are too many to mention them all. The reason why plastics are popular is that they may offer such advantages as transparency, self lubrication, light weight, flexibility, economy in fabricating and decorating. Properties of plastics can be modified through the use of fillers, reinforcing agents and chemical additives. Silicones are by far the most important industrial polymers and are based on silicon, an element abundantly available on our planet. Polymers are classified in three broad groups; addition polymers, condensation polymers and special polymers. It is well known that the major consumption of additives is in PVC compounds. Approximately 80% of additives are being used in PVC; however the left over 20% is consumed in compounding of other thermoplastics. Plastic master batches and fillers have their own importance in plastic processing industries. Colorants are the materials that give colour and opacity to plastics are chemically characterized as either pigments or dyes. Pigments are finely pulverized natural or synthetic particles which may be of inorganic or organic origin and insoluble in the matrix in which they are dispersed. Permanent red 2B is a mono azo pigment that is widely used in thermoplastics because it is inexpensive and has high tinting strength and good bleed resistance. Fillers are commonly employed in opaque PVC compounds to reduce cost and to improve electrical insulation properties, to improve deformation resistance of cables, to increase the hardness of a flooring compound and to reduce tackiness of highly plasticized compounds. Various calcium carbonate are used for general purpose work, china clay is commonly employed for electrical insulation, and asbestos for flooring applications. Also employed occasionally are the silicas and silicates, talc, light magnesium carbonate and barites (barium sulfate). Polymer Energy system is an award winning, innovative, proprietary process to convert waste plastics into renewable energy. Polymers are the most rapidly growing sector of the materials industry. No wonder polymers are found in everything from compact discs to high tech aerospace applications. On the basis of value added, Indian share of plastic products industry is about 0.5% of national GDP.

Some of the astonishing fundamentals of the book are industrial polymers, addition polymers polyolefins, polyethylene, chlorinated polyethylene, cross linked polyethylene, linear low density polyethylene (LLDPE), high molecular weight polyethylene, high density polyethylene, ultrahigh molecular weight polyethylene, polypropylene, poly(vinyl chloride), stabilizers, plasticizers, extenders, mineral filled or glass bead/milled glass grades, antistatic/electro conductive grades, electroplatable grades, etc.

The present book enlightens the processing of industrial polymers, additives, colourant and fillers. This book is an invaluable resource to new entrepreneurs, technocrats, researchers, professionals etc.

## Contents

### 1. INDUSTRIAL POLYMERS

#### INTRODUCTION

#### PART I: ADDITION POLYMERS

##### POLYOLEFINS

Polyethylene

Chlorinated Polyethylene

Cross-Linked Polyethylene

Linear Low-Density Polyethylene (LLDPE)

High-Molecular-Weight High-Density Polyethylene

Ultrahigh-Molecular-Weight Polyethylene

Polypropylene

Poly(Vinyl Chloride)

Stabilizers

Plasticizers

Extenders

Lubricants

Fillers

Pigments

Impact Modifiers and Processing Aids

Properties and Applications

Pastes

Poly(Vinylidene Chloride)

Polytetrafluoroethylene

Processing

Applications

Polyisobutylene

Polystyrene

Polybutadiene (Butadiene Rubber)

Polyisoprene

Polychloroprene

##### OLEFIN COPOLYMERS

Styrene-Butadiene Rubber

Nitrile Rubber

Ethylene-Propylene Elastomer

Butyl Rubber

Thermoplastic Elastomers

Styrene-Diene-Styrene Triblock Elastomers

Thermoplastic Polyester Elastomers

Thermoplastic Polyurethane Elastomers

Thermoplastic Polyolefin Elastomers

Ionic Elastomers

Fluoroelastomers

Styrene-Acrylonitrile Copolymer

Acrylonitrile-Butadiene-Styrene Terpolymer

Ethylene-Methacrylic Acid Copolymers (Ionomers)

Ionomers

##### ACRYLICS

Polyacrylonitrile

Polyacrylates

Polymethacrylates  
Polyacrylamide  
Poly(acrylic acid) and Poly(methacrylic acid)  
Acrylic Adhesives  
VINYL POLYMERS  
Poly (Vinyl Acetate)  
Poly(Vinyl Alcohol)  
Poly(Vinyl Acetals)  
Poly(Vinyl Cinnamate)  
Poly(Vinyl Ethers)  
Poly(Vinyl Pyrrolidone)  
Poly(Vinyl Carbazole)  
PART II: CONDENSATION POLYMERS  
POLYESTERS  
Poly(Ethylene Terephthalate)  
Poly(Butylene Terephthalate)  
Poly(Dihydroxymethylcyclohexyl Terephthalate)  
Unsaturated Polyesters  
Polyester-Glass-Fiber Laminates (GRP, FRP)  
Polyester Molding Compositions  
Aromatic Polyesters  
Wholly Aromatic Copolyester  
Polycarbonates  
POLYAMIDES  
Aliphatic Polyamides  
Properties  
Applications  
Aromatic Polyamides  
Polyimides  
Modified Polyimides  
FORMALDEHYDE RESINS  
Phenol-Formaldehyde Resins  
Resols  
Novolac  
Urea-Formaldehyde Resins  
Molding Powder  
Processing  
Properties and Applications  
Melamine-Formaldehyde Resins  
POLYURETHANES  
Polyesters  
Polyethers  
Polycaprolactone  
Polyurethane Rubbers and Spandex Fibers  
Cross-Linked Polyurethane Rubbers  
(a) Prepolymer formation  
(b) Chain extension of prepolymer  
(c) Cross linking of chain-extended polyurethane  
Thermoplastic Polyurethane Rubbers  
Spandex Fibers  
Flexible Polyurethane Foam

## Applications

Rigid and Semirigid Polyurethane Foams

Polyisocyanurates

Polyurethane Coatings

ETHER POLYMERS

Polyacetal

Poly(Ethylene Oxide)

## Applications

Polyethylene Glycol

Poly(ethylene Oxide)

Poly [Propylene Oxide]

Epoxy Resins

Resin Preparation

Curing

Other Epoxies

## Applications

POLY(PHENYLENE OXIDE)

CELLULOSIC POLYMERS

REGENERATED CELLULOSE

Cellulose Nitrate

Cellulose Acetate

Other Cellulose Esters

Cellulose Ethers

PART III: SPECIAL POLYMERS

Heat-Resistant Polymers

POLY(PHENYLENE SULFIDE)

POLYSULFONE

Properties

Polyether Ether Ketone

Polybenzimidazole

SILICONES AND OTHER INORGANIC POLYMERS

Silicones

Silicone Fluids

Silicone Resins

Silicone Rubbers

Polyphosphazenes

Polythiazyl

FUNCTIONAL POLYMERS

Ion-Exchange Resins

## Applications

Polymeric Reagents

Photoconductive Polymers

Electroconductive Polymers

Light-Sensitive Polymers

Piezoelectric Polymers

2. POLYETHYLENE, HIGH DENSITY (HDPE)

## INTRODUCTION

**NIIR PROJECT CONSULTANCY SERVICES (NPCS)** is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

Our various services are: Detailed Project Report, Business Plan for Manufacturing Plant, Start-up Ideas, Business Ideas for Entrepreneurs, Market Research, Manufacturing Process, Machinery, Raw Materials,

Project Feasibility, Investment Opportunities, Technical Consultancy and Startup Help.

NPCS also publishes process technology books, technical books, startup books, directory, business database, detailed project reports and market research reports.

Our Detailed Project Report aims at providing all the critical data required by entrepreneurs for starting new business ventures.
