Surface Coating Technology Handbook

Author:- NPCS Board of Consultants & Engineers
Format: paperback
Code: NI216
Pages: 680
Price: Rs.1475**US$** 125
Publisher: NIIR PROJECT CONSULTANCY SERVICES
Usually ships within **5** days

Surface Coating is in use since long back is rapidly increasing with the development of civilization. There has been considerable impact in this field. Surface coating technology specializes in finding out engineering solutions to all the critical production problems related to coating the products on a continuous and consistent basis in your production plant. Surface coating can be defined as a process in which a substance is applied to other materials to change the surface properties, such as colour, gloss, resistance to wear or chemical attack, or permeability, without changing the bulk properties. Production of surface coating by any method depends primarily on two factors: the cohesion between the film forming substances and the adhesion between the film and the substrate. The development of science and technology revolutionized the surface coating industry in the progressive countries of the world. Surface coating technology involves the use of various types of products such as resins, oils, pigments, polymers, varnishes, plasticizers, emulsions, etc. We have completely replaced costly petroleum solvents with water and we get cheaper finished products with no evaporation loss and fire hazards. Paint is any liquid, liquefiable, or mastic composition which after application to a substrate in a thin layer is converted to an opaque solid film. It is most commonly used to protect, colour or provide texture to objects. The paint industry volume in India has been growing at 15% per annum for quite some years now. Varnish is one of the important parts of surface coating industry. They are used to change the surface gloss, making the surface more matte or higher gloss, or to provide the various areas of a painting with a more unified finish. Plasticizer plays an important role in the formation of polyvinylchloride (PVC). It is also used to plasticize the polymers. Polymers are divided into three different types; linear polymers, branched polymers and cross linked polymers. Polymer Energy system is an award winning, innovative, proprietary process to convert waste plastics into renewable energy. On the basis of value added, Indian share of plastic products industry is about 0.5% of national GDP.
This book basically deals with principles of film formation, evaporation of solvent from a solution, chemistry and properties of drying and other oils, glyceride structure and film formation, the size of polymer molecules, processing of oil and resin, inorganic pigments, classification by chemical constitution, azo pigments, organic pigments in architectural (decorative), organic pigments in industrial finishes, solvent requirements of specific resins convertible systems, molecular structure of polymer plasticiser systems, properties of plasticised polymers, surface active agents, optical properties, rheological characteristics, emulsions and other aqueous media, formation of polymer emulsions, modern methods of analysis etc.
The book presents a concise, but through an overview of state of technology for surface coating. This is organized into different chapters like principal of film formation, chemistry and properties of drying and other oils, processing of oil and resin, organic pigment, solvents,

plasticizer, surface active agent, surface preparations etc. This book is an invaluable resource to technocrats; new entrepreneurs, research scholars and others concerned to this field.

2. Water Scrubbing of Anhydride Vapours
3. Packed Scrubbers
Condensing and Refluxing
1. Condensers for P.F., V.F. and M.F. Resins
2. Condensers for Alkyd and Polyester Type Resins
Ancillary Equipment
1. Thinning and Blending Tanks
2. Instruments
3. Vacuum Equipment
4. Valves and Fittings
5. Inert Gas Pipes
6. Pressure and Flow Indication
7. Fume Extraction
8. Lagging
9. Miscellaneous
Heating and Cooling
1. Criteria for Selection of Heating and Cooling Systems
2. Heating of Low Temperature Products
3. Heating at Higher Temperatures
4. Fluid Heat Transmission
5. Heating by Electricity
6. Heating of Pipework and Ancillaries
5. INORGANIC PIGMENTS
Introduction
Origins of Pigments
1. Comparison of Natural and Synthetic Pigments
2. Problems in Producing Natural Pigments
3. Pigment Classification
Pigmentary Properties
1. Particle Size and Particle Size Distribution
2. Particle Shape
3. Colour
4. Refractive Index
Chemical Engineering Processes of Manufacture
1. Precipitation
2. Vapour Phase Oxidation
3. Heterogeneous Surface Reaction (Corrodibility and Corrosion)
4. Solid Phase at Elevated Temperature
Important Groups of Pigments
1. Titanium Dioxide Group
2. Lead Group
3. Zinc Group
4. Antimony Group
5. Lead Chrome Group
6. Chrome Green Group
7. Iron Oxide Group
8. Iron Blue Group
9. Ultramarine Group
10. Cadmium Yellow and Red Group
6. ORGANIC PIGMENTS
Important Properties of Organic Pigments
1. Light Fastness

2. Hydrocarbon Solvents
3. Ketones
4. Esters
5. Glycol Monoethers
6. Ethers
7. Alcohols
8. Halogenated Compounds
9. Nitroparaffins

Evaluation and Selection of Solvents

1. Solvency
2. Tolerance for Non-solvents
3. Viscosity of Resin Solutions
4. Drying Time
5. Final Properties of the Film
6. General Conclusions

Solvent Requirements of Specific Resinsâ€”Convertible Systems

1. Oil Varnishes
2. Alkyd and Alkyd/Amino Resin Composition
3. Silicones
4. Acrylic Resins
5. Urethanes
6. Phenolic Resins
7. Epoxy Resins
8. Polyester Resins

Solvent Requirements of Specific Resins-Non-Convertible Systems

1. Cellulose Compositions
2. Vinyl Resins
3. Acrylic Resins
4. Shellac and Other Spirit-Soluble Resins
5. Rubber Resins and Derivatives

9. PROPERTIES OF SOLVENTS
10. PLASTICIZERS

Introduction

Molecular Structure of Polymer-Plasticiser Systems

1. Effect of Molecular Size
2. Types of Polymers
3. Identification of Polymer Types

Criteria of Plasticiser Efficiency and Compatibility of Polymers

1. The Second-Order Transition Temperature
2. Tests to Show Whether A Given Polymer System Can Be Plasticised
3. Properties of Concentrated Polymer Solutions
4. Compatibility of Resin and Plasticiser
5. Vapour Pressure of Plasticisers

Properties of Plasticised Polymers

1. Exudation Phenomena and Exudate Composition
2. Migration of Plasticisers
3. Tensile Strength
4. Viscosity of Plasticisers and Its Effects
5. Inflammability

The Chemical Types of Plasticisers
1. Hydrocarbons
2. Esters
3. Epoxidised Vegetable Oils
4. Polyesters
Toxicity of Plasticisers
1. Hydrocarbons
2. Halogenated Hydrocarbons
3. Alcohols
4. Glycols
5. Ketones
6. Esters-organic
7. Esters-Inorganic
11. SURFACE ACTIVE AGENTS
Introduction
Types of Surfactants
1. Anion Active
2. Cation Active
3. Ampholytic
4. Non-ionic
5. Miscellaneous
Properties
1. Compatibilities
2. Chemical Stability
3. Physico-Chemical Characteristics
4. Surface and Interfacial Tension
Suspension, Sedimentation and Flocculation
1. Factors Governing Sedimentation Rate
2. Emulsions
Choice of Surfactant
1. Effect of Chain Length
2. Hydrophile/Lipophile Balance
3. Foaming and Anti Foaming
Pigment Treatment
1. Surfactants as Additives in Grinding and Dispersion
2. Pigment Pretreatment
3. Pigment Flushing
Specific Uses in Paints
1. Oil-Bound Water Paints
2. Emulsion (Polymerised) Paints
3. Adhesion of Paints
4. Rheological Properties
5. Speciality Paints
6. Miscellaneous Allied Applications
12. OPTICAL PROPERTIES
Introduction
1. Factors Affecting the Appearance of Coatings
2. Application of Optical Data
Light Transmission, Absorption and Reflection
Correlation of Light Beam Phenomena
Scattering
Opacity
Types of Transparent Coatings

Curtain Coating
Barrelling and Centrifugal Application
Stoving
Operation of Stoving Ovens
Convection Ovens
Radiant Heat Ovens
19. MODERN METHODS OF ANALYSIS
Iâ€”Absorption spectroscopy
Introduction
General Features
Wavelength
Intensity
Quantitative Analysis
Ultra-Violet Spectroscopy
Principle
Instruments and Technique
Analytical Applications
Infra-Red Spectroscopy
Principle
Instruments and Technique
Analytical Application
IIâ€”Gas chromatography
Introduction
Basis of System
Injection System
Detector
Applications
Solvent Analysis
Plasticiser Analysis
Hydrocarbon Analysis
Fatty Acid Analysis
Phenol Analysis
Resin and Polymer Analysis
Recent Developments

About NIIR

NIIR PROJECT CONSULTANCY SERVICES (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

Our various services are: Detailed Project Report, Business Plan for Manufacturing Plant, Start-up Ideas, Business Ideas for Entrepreneurs, Start up Business Opportunities, entrepreneurship projects, Successful Business Plan, Industry Trends, Market Research, Manufacturing Process, Machinery, Raw Materials, project report, Cost and Revenue, Pre-feasibility study for Profitable Manufacturing Business, Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Business Opportunities, Investment Opportunities for Most Profitable Business in India, Manufacturing Business Ideas, Preparation of Project Profile, Pre-Investment and Pre-Feasibility Study, Market Research Study, Preparation of Techno-Economic Feasibility Report, Identification and Section of Plant, Process,

Equipment, General Guidance, Startup Help, Technical and Commercial Counseling for setting up new industrial project and Most Profitable Small Scale Business.

NPCS also publishes varies process technology, technical, reference, self employment and startup books, directory, business and industry database, bankable detailed project report, market research report on various industries, small scale industry and profit making business. Besides being used by manufacturers, industrialists and entrepreneurs, our publications are also used by professionals including project engineers, information services bureau, consultants and project consultancy firms as one of the input in their research.

Our Detailed Project report aims at providing all the critical data required by any entrepreneur vying to venture into Project. While expanding a current business or while venturing into new business, entrepreneurs are often faced with the dilemma of zeroing in on a suitable product/line.

NIIR PROJECT CONSULTANCY SERVICES, 106-E, Kamla Nagar, New Delhi-110007, India.
