

Handbook on Fermented Foods and Chemicals

Author:- NPCS Board of Consultants & Engineers

Format: paperback

Code: NI233

Pages: 672

Price: Rs.1875US\$ 150

Publisher: NIIR PROJECT CONSULTANCY SERVICES

Usually ships within 5 days

Numerous foods are prepared by fermentation processes in which one or more kinds of microorganisms are responsible for the characteristic flavour or texture, and sometimes for the keeping quality of the product. The manufacture of fermented food products is carried out on a small scale in homes in every country. Fermented products are more palatable and are not as easily spoiled as the natural products. The microorganisms that produce the desirable changes may be the natural flora on the material to be fermented, or may be added as starter cultures. The yield of organic acids principally lactic, serve as a preserving agents. Lactic acid fermentation is an anaerobic intramolecular oxidation reduction process. Both homofermentative and heterofermentative lactic acid bacteria participate in food fermentations. In some fermented food products, yeasts and moulds also participate along with lactic acid bacteria. Most of the reactions in living organisms are catalyzed by protein molecules called enzymes. Enzymes can rightly be called the catalytic machinery of living systems. The real break through of enzymes occurred with the introduction of microbial proteases into detergents. Most of the enzymes are produced by microorganisms in submerged cultures in large reactors called fermentors. In choosing the production strain several aspects have to be considered. Industrial enzyme market is growing steadily. The reason for this lies in improved production efficiency resulting in cheaper enzymes, in new application fields. Tailoring enzymes for specific applications will be a future trend with continuously improving tools and understanding of structure-function relationships and increased search for enzymes from exotic environments. This field deals with how are the enzymes used and applied in practical processes. A lot of fungal, bacterial and actinomycete strains with potential for producing novel industrial enzymes have been identified.

This book contains sterilization, fermentation processes, aeration and agitation, use of yeast, yeast production, fermentation raw materials, production of bacterial enzymes, bread making methods, effluent treatment, production of actinomycete protease, lactic acid, citric acid. This handbook will be very helpful to its readers who are just beginners in this field and will also find useful for upcoming entrepreneurs, existing industries, food technologist, technical institution etc.

1. The Development of Inocula for Industrial Fermentations

Introduction

The development of inocula for yeast processes

Brewing

Baker's Yeast

- The development of inocula for bacterial processes
- The development of inoculum for fungal processes
- Sporulation on Solidified Media
- Sporulation on Solid Media
- Sporulation in Submerged Culture
- The Use of the Spore Inoculum
- Inoculum Development for Vegetative Fungi
- The Effect of the Inoculum on the Morphology of Fungi in Submerged Culture
- The development of inoculum for streptomycete processes
- The aseptic inoculation of plant fermenters
- Inoculation from a Laboratory Fermenter or a Spore Suspension Vessel
- Inoculation from a Plant Fermenter

2 An Introduction to Fermentation Processes

- Lactate
- Acetaldehyde
- Acetolactate
- Butanediol
- Ethanol
- The range of fermentation processes
- Microbial Biomass
- Microbial Enzymes
- Microbial Metabolites
- Transformation Processes
- The chronological development of the fermentation industry
- The component parts of a fermentation process

3. Sterilization

- Introduction
- Medium sterilization
- Advantages of Continuous Sterilization over Batch Sterilization
- Advantages of Batch Sterilization over Continuous Sterilization
- The design of batch sterilization processes
- Calculation of the Del Factor during Heating and Cooling
- Calculation of the Holding Time at Constant Temperature (121°C)
- Richards's™ Rapid Method for the Design of Sterilization Cycles
- The Scale Up of Batch Sterilization Processes
- Method of Batch Sterilization
- The design of continuous sterilization processes
- Sterilization of the fermenter
- Sterilization of the feeds
- Sterilization of Air
- The Theory of Fibrous Filters
- Filter design

4. Media for Industrial Fermentations

- Introduction
- Typical media
- Medium formulation
- Water
- Energy sources
- Carbon sources
- Examples of Commonly Used Carbon Sources

Factors Influencing the Choice of Carbon Source
The Influence of the Carbon Source on Product Formation
Nitrogen sources
Examples of Commonly Used Nitrogen Sources
Factors Influencing the Choice of Nitrogen Source
Vitamin sources
Nutrient recycle
Buffers
The addition of precursors and metabolic regulators to media
Precursors
Inhibitors
Inducers
Oxygen requirements
Fast Metabolism
Rheology
Restricted nutrient levels
Antifoams

5. Aeration and Agitation

Introduction
The oxygen requirements of industrial fermentations
Glucose
Oxygen supply
Determination of $K_L a$ values
Gassing-out techniques
The static method of gassing out
The dynamic method of gassing out
Fluid rheology
Bingham Plastic Rheology
Pseudoplastic Rheology
Dilatant Rheology
Casson Body Rheology
Factors affecting $K_L a$ values in fermentation vessels
The Effect of Air-Flow Rate on $K_L a$
The Effect of the Degree of Agitation on $K_L a$
The relationship between $K_L a$ and power consumption
The relationship between power consumption and operating variables
The Effect of Medium and Culture Rheology on $K_L a$
Medium rheology
The effect of microbial biomass on $K_L a$
The effect of microbial products on aeration efficiency
The Effect of Foam and Antifoams on Oxygen Transfer

6. Mushrooms

Mushrooms and single-cell (microbial) protein
Production of the oyster mushroom, *Pleurotus* Species
Methods of Cultivation
Economics of Industrial Production
Growth of *Pleurotus Ostreatus* on Waste Paper
Growth of *Pleurotus ostreatus* on waste paper
Production of *volvariella volvacea*: straw mushrooms
Description
Patterns of Production and Consumption

Steps in Production
Factors Controlling Mushroom Production
Harvesting and Preservation
Discussion of Processing Steps
Preservation of Straw Mushrooms
Nutritional Content
New Microbial Strains
Expansion of Straw Mushroom Production
Edible termitomyces and their culture in the laboratory
Collection and Identification of Termitomyces Species
Culture of the Edible Species
Effect of Culture Media on Mycelia Growth
Effect of Light, Temperature, and pH on Mycelial Growth
Spawn Formation
Fruiting Body Formation
Results and Discussion
Isolation in Pure Culture
Effect of Culture Media
Effect of Temperature
Effect of Light
Effect of pH
Spawn and Fruiting Body Formation

7. Use of Yeast in Baking

Historical Introduction
Function of yeast in baking
Leavening
Effect of Yeast on Dough Development
Flavour Development
Forms of yeast used in baking
Compressed Yeast
Active Dry Yeast
Yeast for Home Baking
Yeast of Enrichment
Behaviour of yeast in dough systems
Use of Yeast in Various Dough Systems
Growth of Yeast in Doughs
Accelerated Processing of Yeast-raised Products
Yeast-leavened, Unbaked, Frozen Doughs
Sour Doughs

8. Distillers'™ Yeast

Introduction
Raw materials
Yeast preparation
Distillers'™ Yeast
Inoculation of Yeast Mash from Preceding Mash
Inoculation of Yeast Mash with Laboratory Pure Cultures
Use of Compressed or Active Dry Bakers'™ Yeast
Distillers'™ fermentations
Contaminants
Distillation
Composition of distilled spirits

9. Brewers' Yeast

Introduction

General characteristics of brewers' yeasts

Specific characteristics of brewers' yeasts

Flocculation

Wild Yeasts

Yeasts Cultivation and Pitching

Nitrogen Metabolism of Brewers' Yeast

Vitamin Requirements

Mineral Requirements

Fermentation of Wort Sugars

Effect of Temperature and Other Variables on Rate and Time of Fermentation

Growth of Yeast

By-products of alcoholic fermentation

Higher Alcohols (Fusel Oils)

Esters

Diacetyl, Acetoin, 2, 3-Butanediol, and 2, 3-Pentanedione

Aldehydes

Glycerol

Acids

Sulfur Compounds

Processing

Generation of Heat

Batch Fermentations and Modified Batch Fermentations

Continuous Fermentation

Microbial Stability of Beer

Adsorption of Isohumulone and Anthocyanins by Yeast

10. Wine Yeasts

History

Wine yeast terminology

Description of species

Natural yeasts and their occurrence in grapes and musts

Fermentation by natural yeasts and by wine yeasts

Production of wine yeast starters

Compressed wine yeast and active dry wine yeast

Biochemistry of wine yeast fermentations

Rate of Fermentation

Effect of Temperature

Fermentable Sugars in Musts and Yield of Ethanol

Effect of Carbon Dioxide Pressure on Fermentation

Effect of Ethanol on Fermentation Rate

Effect of pH on Rate of Fermentation

Sulfur Dioxide

Diethyl Pyrocarbonate (DEPC)

Sorbic Acid and p-hydroxybenzoic Acid Esters

Tannins

Ion-exchange Resins, Antibiotics and Fungicides

By-products of the alcoholic fermentation, flavor compounds, acids and yeast nutrients

Introduction

Alcohols

Aldehydes

Glycerol, 2,3-Butylene Glycol, Acetoin and Diacetyl
Esters
Malic Acid and the Malo-lactic Fermentations
Acids
Nitrogenous Compounds
Sulfur Compounds
Vitamin Requirements of Wine Yeasts
Production of wines
Introduction
Red and White Table Wines
Sherry
Sparkling Wines
Fermentation of Uncrushed Grapes (Maceration Carbonique)
Continuous Fermentation
Cider and Other Fruit Wines

11. Bakers'™ Yeast Production

History
Outline of the manufacturing process
Raw materials
Molasses
Minerals
Vitamins
Nitrogen
Fermentation Activators
Fermentation Inhibitors
Principles of aerobic growth of bakers'™ yeast
Introduction
Concentration of Fermentable Sugars
Limitation of Yeast Growth Rate
Oxygen Requirements and Aeration
Effect of pH
Temperature
Yield Energy, and the Development of Heat
Osmotic Pressure
Yeast Concentration in the Fermenter
Periodicity and Budding
Practice of the aerobic growth of bakers'™ yeast
Fermentation Tanks
Cooling
Aeration Systems
Feed Rates
Sequence of Fermentations
Defoaming
Utilization of Ethanol
Automatic Process Control
Continuous Aerobic Propagation of Bakers'™ Yeast
Harvesting of Yeast Cells
Mixing, Extruding and Packaging Compressed Yeast
Contamination
Stability of Compressed Yeast
Active Dry Yeast

12. Lactic Acid $\text{CH}_3\text{CHOHCOOH}$

From whey by Fermentation

Reaction

Material Requirements

Process

From Lactonitrile

Use Pattern

Miscellaneous

Economic Aspects

13 Citric Acid

From Molasses by Fermentation

Reaction

Material Requirements

Process

By Submerged Fermentation

Use Pattern

Miscellaneous

Economic Aspects

14. A Milk-Bottle Fermentation

15. The Fermentor: An Elaborate Milk Bottle

16. Fermentation Raw Materials

17. A Typical Industrial Fermentation

18. Production of Actinomycete Protease by Solid-State Fermentation and its Application in

Dehairing of Goatskin

Introduction

Materials and methods

Isolation of Proteolytic Soil Actinomycetes

Dehairing of Goatskins

Analyses

Determination of Protein

Protease Assay

Results

Isolation of Proteolytic Soil Actinomycetes

Discussion

19. Fermented Vegetables

Introduction

Theory behind fermented vegetables

Indian or oriental fermented vegetables

Fermented vegetables of the west

Advantages of Fermented Vegetables: Disadvantages of Fermented Vegetables

20 Production of Bacterial Extracellular Enzymes by Solid State Fermentation

Introduction

Materials and methods

Bacterial Strains

Enzyme Production in SSF

Amylase Production vs. Incubation Period
Effect of Moisture Level
Effect of Various Additives
Solid State Cultivation in Trays
Enzyme Assays
Results and discussion

21. Fermented Products

General procedure

Tips

Simple Bread

Method

22. Bread Characteristics

Introduction
External characteristic
Volume
Bloom
Crust Colour
Factors Affecting the Crust Colour
Evenness of Bake
Factors Affecting Evenness of Bake
Oven Break
Factors Affecting Oven Break
Internal characteristics
Crumb Colour
Factors Affecting Crumb Colour
Crumb Structure
Factors Affecting Crumb Structure
Crumb Clarity and Elasticity
Crumb Clarity
Crumb Elasticity
Sheen and Texture
Sheen
Texture
Taste and Aroma
Factors Affecting Taste and Aroma
Moistness
Factors Affecting Moistness
Cleanliness
Bread faults
Introduction
External faults
Faults in Volume
Lack of Volume
Excessive Volume
Faults in Crust
Lack of Crust Colour
Dark Crust Colour

Cracking of Crust
Leathery Crust
Hard Crust
Thick Crust
Blisters
Lack of Bloom
Shell Top
Irregularity of Shape
Lack of Cleanliness
Internal faults
Holes and Tunnels
Core, Seams, Streaks & Condensation Mark
Damp, Clamy & Closed Crumb
Dryness and Rapid Staling
Crumbliness of the Crumb
Defects in Taste and Aroma
Summary of bread faults and their causes
Bread diseases
Introduction
Rope
Bacteria Responsible
Symptoms
Sources of Contamination
Moulds
Types
Causes
Preventive Measures
Chemical Inhibitors
Germicidal Ultraviolet Rays
Recommended Bread Making Practices
Cleaning
Raw Material
Fermentation
Baking
Cooling
Contact Surface
Packing
Storage
Re-entry of Stale Bread
Customers
Bleeding Bread
Food Poisoning
Salmonella
Sources
Symptoms
Prevention
Streptococcus
Staphylococci
Variety bread
Introduction
French Bread
Italian Bread
Vienna Bread

Dutch Bread
Raisin Bread
Rye Bread
Egg Twist Bread
Cracked Bread
Process control
Fermentation
Proofing
Staleness in bread
Introduction
What is Staleness?
Characteristics of stale bread
Types
Crust Staling
Causes
Preventive Measures
Crumb Staling
Causes
Improper Quality Raw Material
Improper Bread Processing
Improper Packing and Storage
Retardation
Ingredients
Processing
Freezing
Use of Additives
Bake shop emergencies
Introduction
Yeast problem
Shortage of Yeast
No Yeast in the Dough
Too Much Yeast
Salt problem
Dough without Salt
Too Much Salt
Too Much Sugar, Shortening or Milk
Overweight of Flour or Water
Late Mixing

23. Other Fermented Products

Introduction
Bun goods
Raw Material
Processing
Prepared Mixtures
Pizza base/crust
Raw Material
Processing
Doughnut
Raw Material
Processing

24. Bread Ingredient

- Introduction
- Raw material
- Flour
- Colour
- Strength
- Tolerance
- Water Absorption Power
- Uniformity
- Diastetic Activity
- Effect of Low and High Diastetic Activity on Bread
- Preventive Measures

25. Bread Making Methods

- Introduction
- Conventional methods
- Straight Dough Method
- Advantages and Disadvantages
- Sponge and Dough Method
- Advantages and Disadvantages
- Salt Delayed Method
- Advantages and Disadvantages
- No Dough Time Method
- Advantages and Disadvantages
- Ferment and Dough Process
- Mechanical dough development method
- Liquid Brew

26. Bread Processing

- Introduction
- Ingredient selection and formula balancing
- Mixing/Kneading
- Purpose
- Flying Ferment
- Process
- Importance
- Other Preparation
- Dough Temperature
- Mixing Process
- Hand Mixing
- Machine Mixing
- Slow speed mixing
- High speed mixing
- Spiral mixing
- Mixing Stages
- Mixing Time
- Flour Quality
- Bread Making Method
- Dough Temperature and Consistency
- Fat and Salt Quantity and Stage of its Addition
- Over or Under Mixed Dough
- Over Mixed Dough
- Under Mixed Dough
- Physical and Chemical Changes During Mixing

Physical Changes
Chemical Changes
Bulk fermentation
Physico-chemical Reactions
Under or Over Ferment Dough
Under Ferment Dough
Over Ferment Dough
Knock back
Dough make-up
Scaling
Rounding
Intermediate Proofing
Moulding
Hand Moulding
Machine Moulding
Panning
Tempering the Pan
Greasing/Glazing the Pan
Bread Pan
Proofing
Factor Affecting the Final Proof
Temperature
Relative Humidity
Diastetic Activity of the Flour
Fermentation
Under or Over Proofing
Over Proofing
Under Proofing
Baking
Time and Temperature
Physico-chemical Changes
Oven Rise and Oven Spring
Yeast Activity
Enzyme Activity
Starch Gelatinization
Protein Denaturation
Protein Coagulation
Browning Reaction
Oven Problems
Insufficient Oven Heat
Excessive Oven Heat
Excess Steam
Insufficient Steam
Improper Heat Distribution
Incorrect Pan Spacing
Depanning
Cooling
Slicing
Packing/Wrapping

27. Effluent Treatment

Introduction

Dissolved oxygen concentration as an indicator of water quality

Factory surveys
The strengths of fermentation effluents
Treatment and disposal of effluents
Disposal
Seas and Rivers
Lagoons
Spray Irrigation
Well Disposal
Disposal of Effluents to Sewers
Treatment processes
Physical Treatment
Chemical Treatment
Biological Treatment
Aerobic Processes
Tricking Filters
Towers
Rotating Discs
Rotating Drums
Activated Sludge
Anaerobic Treatment
Anaerobic Digestion
Anaerobic Filters
By-products
Distilleries
Breweries
Amino Acid Wastes

About NIIR

NIIR PROJECT CONSULTANCY SERVICES (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

Our various services are: Detailed Project Report, Business Plan for Manufacturing Plant, Start-up Ideas, Business Ideas for Entrepreneurs, Start up Business Opportunities, entrepreneurship projects, Successful Business Plan, Industry Trends, Market Research, Manufacturing Process, Machinery, Raw Materials, project report, Cost and Revenue, Pre-feasibility study for Profitable Manufacturing Business, Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Business Opportunities, Investment Opportunities for Most Profitable Business in India, Manufacturing Business Ideas, Preparation of Project Profile, Pre-Investment and Pre-Feasibility Study, Market Research Study, Preparation of Techno-Economic Feasibility Report, Identification and Section of Plant, Process, Equipment, General Guidance, Startup Help, Technical and Commercial Counseling for setting up new industrial project and Most Profitable Small Scale Business.

NPCS also publishes various process technology, technical, reference, self employment and startup books, directory, business and industry database, bankable detailed project report, market research report on various industries, small scale industry and profit making business. Besides being used by manufacturers, industrialists and entrepreneurs, our publications are also used by professionals including project engineers, information services bureau, consultants

and project consultancy firms as one of the input in their research.

Our Detailed Project report aims at providing all the critical data required by any entrepreneur vying to venture into Project. While expanding a current business or while venturing into new business, entrepreneurs are often faced with the dilemma of zeroing in on a suitable product/line.

NIIR PROJECT CONSULTANCY SERVICES, 106-E, Kamla Nagar, New Delhi-110007, India.
