

# The Complete Book on Ferroalloys

**Author:** B.P Bhardwaj

**Format:** Paperback

**ISBN:** 9789381039298

**Code:** NI258

**Pages:** 480

**Price:** Rs. 2,775.00 **US\$** 250.00

**Publisher:** NIIR PROJECT CONSULTANCY SERVICES

Usually ships within **5** days

The Complete Book on Ferroalloys

(Ferro Manganese, Ferro Molybdenum, Ferro Niobium, Ferro Boron, Ferro Titanium, Ferro Tungsten, Ferro Silicon, Ferro Nickel, Ferro Chrome)

An alloy is a mixture or solid solution composed of metals. Similarly, Ferroalloys are the mixture of Iron with high proportion of other elements like manganese, aluminium or silicon. Alloying improves the physical properties like density, reactivity, Young's modulus, electrical and thermal conductivity etc. Ferroalloys thus show different properties as mixture of different metals in different proportion exhibit a wide range of properties. Also, Alloying is done to alter the mechanical properties of the base metal, to induce hardness, toughness, ductility etc.

The main demand of ferroalloys, nowadays is continuously increasing as the major use of such products are in the field of civil construction; decorative items; automobile; steel industry; electronic appliances. The book provides a wide idea to readers about the usage of appropriate raw material and the treatment involved in the processing of raw material to final produce, safety, uses and properties of raw material involved in the processes.

This book concisely presents the core principles and varied details involved in processing of ferroalloys. The work includes detailed coverage of the major products like ferroaluminium, ferrosilicon, ferronickel, ferromolybdenum, ferrotungsten, ferrovanadium, ferromanganese and lesser known minor ferroalloys. Progress in thermodynamics and physico-chemical factors in ferroalloy production has developed rapidly during the past twenty-five years or so. The book presents the principles and current knowledge of processes in the production of various ferroalloys.

The production of a particular ferroalloy involves a number of processes to be followed in order to give the alloy desired physical and mechanical properties. The slight difference in the temperature or heating or composition can lead to entirely different alloy with different properties. This book is not only confined to the different processes followed in the production of ferroalloys but also describes the processes used and other information related to product, which are necessary for the manufacturer's knowledge. Also, the book gives the reader appropriate knowledge regarding the selection the best of available raw materials.

## Contents

### 1. INTRODUCTION

Theory

Terminology

Interstitial Alloy  
Classification of Alloys

## 2. FERROALLOYS

Ferroalloys

Ferro Aluminium

Ferro Boron

Ferro Chromium

Ferro Manganese

Ferro Molybdenum/Molybdic Oxide

Ferro Molybdenum

Molybdic Oxide

Ferro Niobium

Ferro Phosphorus

Ferro Selenium

Ferro Silicon

Ferro Silico Manganese

Ferro Silicon Magnesium

Ferro Silicon Zirconium

Ferrous Sulphide

Ferro Titanium

Ferro Vanadium

Calcium Silicon Manganese

Calcium Silicon

Ferro Tungsten

Iron

## 3. PRODUCTION OF FERROALLOYS

Primary Processes

Secondary Processes

Applied Processes and Techniques

Ferro-chrome

Raw Materials

Pre-treatment Techniques

Production of Ferro-chrome and Silico-chromium

High-carbon Ferro-chrome

## 4. PRODUCTION OF FERRO MANGANESE

Raw Materials

Pre-treatment Techniques

Production of Ferro-manganese and Silico-manganese

High-carbon Ferro-manganese

Medium-carbon Ferro-manganese

Low-carbon Ferro-manganese

Silico-manganese

Types of Ferromanganese

Production of Ferromanganese

Production of High Carbon Ferromanganese

Blast Furnace Production

Electric Furnace Production

High Manganese Slag Practice

Discard Slag Practice

Production of Medium-Carbon Ferromanganese

Silicothermic Production of Medium-Carbon Ferro-manganese

Production of Medium-Carbon Ferromanganese by Oxygen Refining of High-Carbon Ferromanganese

Production of Low-Carbon Ferromanganese

Thermodynamics of Reduction of Manganese Oxides

High Carbon Ferromanganese Slags

Refining of Ferro Manganese

Introduction

The Sintering Pilot Facility

Preparation of the Sinter Mix

Sintering

Characterization

Performances

Eramet Research Mn Alloys Smelting Pilots

Background

Pilot Campaign Approach

Transfer of the Pilot Results to the Plants

The New Pyrometallurgy Piloting Facility

Constraints and Stakes for the New Facility

Definition of the Power Supply Characteristics

Design of the New Power Supply

Design of the Furnace

Furnace Diameter

Furnace Height

Side Wall Furnace Lining

Hearth Lining and Bottom Electrode

5. PRODUCTION OF FERRO MOLYBDENUM

Production of Ferro-molybdenum

Raw Materials

Carbo-thermic Production of Ferro-molybdenum

Metallo-thermic Production of Ferro-molybdenum

6. PRODUCTION OF FERRO NIOBIUM

Introduction

Basic Technology of FeNb Manufacturing

The Evolution of Ferro-niobium Manufacturing

Recent Developments in Ferro-niobium Manufacturing

Pyrometallurgical Refining of Concentrate

Sintering

Electric Arc Furnace Smelting

Ferro-Niobium Production

Crushing and Packaging

Future Developments in Ferro-niobium Manufacturing

7. PRODUCTION OF FERRO BORON

Ferro-niobium

Production of Ferroalloys from Secondary Raw Material

Raw Material and Raw Material Preparation

8. PRODUCTION OF FERRO TITANIUM

Transferred-arc Plasma Furnaces

The Reduction of TiO<sub>2</sub>

Enthalpy Considerations

Constitution of the Charge

Choice of Raw Material

Reasons for the Choice of a d.c. Transferred-arc Plasma Furnace

Small-scale Batch Tests in a 50 kVA Water-cooled Furnace

Equipment and Procedures

Objectives of the Experimental Work

Interpretation of Results of the Small-scale Tests

Large-scale Continuous Tests  
Further Experimental Work  
Melting Point of the Alloy  
The Addition of Iron to the Charge  
Further Furnace Modifications  
Small-scale Sealed Furnace  
9. PRODUCTION OF FERRO TUNGSTEN  
Production of Ferro-tungsten and Tungsten Melting Base  
Tungsten Melting Base (TMB)  
Ferro-titanium  
10. PRODUCTION PROCESS OF FERRO SILICON  
Raw Materials  
Production of Ferro-silicon, Silicon Metal and Silico-calcium  
Ferro-manganese and Manganese Alloys  
Refining of Ferro-silicon  
Introduction  
Processes for the Refining of Ferro-silicon  
Solid/Liquid Oxide Method  
Oxidising Treatment with Gaseous Oxygen/Enriched Air  
Refining with Chlorine Gas  
Purification by Carbon Dioxide Injection Method  
Typical Results from Studies on the Refining of Ferrosilicon Carried Out at NML  
The Chlorine Donor Method  
The Carbon Dioxide Injection Method  
The Oxygen Injection Method  
Conclusions  
Ferro Silicon Operation at IMFA—A Critical Analysis  
Introduction  
Quality Norms of Raw Materials at IMFA  
Quality Deviations Experienced By IMFA  
Ferro Silicon Process Description  
Formation of Slags in Ferro Silicon  
Types of Slag  
Characteristics of Different Kinds of Slags  
Incompletely converted charge (Slagging)  
SiC with Si at the Bottom  
Crusts of Sintered Charge Materials in the Upper Parts of the Furnace  
Description of the Furnace  
Operating conditions of the Furnace  
Problems in the Furnace  
Observations on the Deteriorating Conditions  
Introduction of Lime Stone in the Burden  
Variation in the Slag Properties  
Operating Data  
Improvements in the Furnace Performance  
Comparison of Output Alloy Analysis  
Detrimental Effects of CaO in the Burden Charge  
Overcoming the Problem of Alloy Disintegration  
Remarks and Conclusion  
Controlled solidification of Ferrosilicon  
Introduction  
Experimental Work  
Equipment

Casting  
Investigation  
Results and Discussion  
Primary Silicon Grains  
Eutectic  
Distribution of Aluminium and Calcium  
Cracking  
Porosity  
Conclusions

## 11. PRODUCTION OF FERRO NICKEL

Raw Materials

Production of Ferro-Nickel from Primary Raw Material

Production of Ferro-Nickel from Secondary Raw Material

“Ferronickel Ladle Furnace Refining Process”

Introduction

Process Description

Equipment

Process Theory

Oxidation

Desulfurization

Development

Oxidation

Desulfurization

Observation

Conclusions

Design of a Modern Large Capacity FeNi Smelting Plant

History, Applications and Trends

Experiences in FeNi-Smelting and Rectangular Furnaces

General Trends in the FeNi-production; Industry Demand

Design Principles of Large Scale FeNi-smelters

Calcine Transport System

Submerged Arc Furnace (SAF)

Principle of Submerged Arc Furnaces

Design Principle of a Large-Scale Rectangular FeNi-smelter

Process and Furnace Dimensioning

3-D Fluid Dynamic Modelling

Control and Operation

Furnace Integrity and Cooling

Further Application of Side Wall Copper Cooling for Rectangular Furnace

Additional Technological Highlights

SMS DEMAG Tapping Machines

Off-gas System

Plant Start Up

Refining of FeNi

Conclusions and Outlook

## 12. PRODUCTION PROCESS OF FERRO CHROME

Medium-Carbon Ferro-Chrome

Low-Carbon Ferro-Chrome

Silico-Chromium

Ferro-Silicon and Silicon Alloys

Various Techniques to Produce Low Carbon Ferrochrome

Introduction

Problems of Carbon

Decarburization  
Decarburization Techniques  
Conventional Techniques  
Refining of Ferrochrome by Chromium Ore  
Refining of Ferrochrome by Blowing Oxygen  
Refining of Ferrochrome with the Presence of Silica  
Silicothermic Process for the Production of Low Carbon Ferrochrome  
Production of Carbon Free Ferrochrome by Aluminothermic Method  
Non Conventional Techniques  
Decarburization of Solid Ferrochrome  
Decarburization using Oxidizing Gas Mixture  
Production of Low Carbon Ferrochrome from Chromite Ore  
Khalafala's Method  
Other Methods  
Conclusion  
Modern Practices of Post Taphole Operation in Ferro Chrome Production and its Advantages  
Introduction  
Mechanized Flow Sheet for Handling High Carbon Ferro Chrome Metal 62000 T/Y and Corresponding Slag  
Post Taphole Concept  
Taphole Installation  
Conventional and Freeze Lining Concept  
Taphole Configuration  
Taphole Lining  
Taphole Operation  
Temperature Monitor and Control  
Important Aspect for Effective Taphole Operation  
Movable Tapping Platform  
Receptacles  
Skimming System  
Casting, Crushing, Screening & Handling of Finished Product  
Liquid Slag Handling and Disposal  
Granulation Process  
Recovery of Entrapped Metal from the Slag  
13. PRODUCTION OF FERROALLOY FROM  
SECONDARY RAW MATERIALS  
Raw Material and Raw Material Preparation  
Preprocessing  
Mixing and Drying (Plasma Dust Process only)  
Submerged arc Furnace Process  
Plasmadust Process  
14. PRODUCTION TECHNIQUES OF  
FERROALLOYS  
General  
Process Description  
Submerged Electric Arc Process  
Exothermic (Metallothermic) Process  
Electrolytic Processes  
Emissions and Controls  
Aluminothermic Reduction of Oxides with Liquid Start  
Description  
Innovative Aspect and Main Advantages  
Areas of Application  
Atomisation of Ferroalloys

The Atomisation Process  
Why Atomise (or Granulate)?  
To Produce a Saleable, Dust-free Brittle Product  
To Produce a Small-sized Ductile Product  
To Produce a Reactive Intermediate Product  
To Produce a "Rapidly Solidified" Product  
To Produce Special Powder Products  
Atomisation Processes  
Water Atomisation  
Gas/Air Atomisation  
Centrifugal Atomisation  
Atomised Products and Their Markets  
Ferrosilicon 15% Dense Medium  
Ferrosilicon 45% for the Welding Industry  
Ferromanganese for the Welding Industry  
Injectables  
Higher Melting Alloys  
Silicon  
Process Selection  
The Improvements to Copper Casting Machine for Ferroalloys  
Brief Description of Casting Machine  
Artificial Vision System  
Monitoring of Main Parameters of the Casting  
New Improvements of the Casting Machine  
Advantages of the Casting Machine  
From the Metal Quality Point of View  
From the Economical Point of View  
Application of Fluid Bed in Ferroalloy Industry  
Introduction  
Particle Characterization and Flow Regimes  
Fluidized Beds in the Ferroalloy Industry  
Ferrochromium Production  
Ferronickel Production  
Ferromanganese Production  
Conclusions  
Low Cost Ferroalloy Extraction in DC-ARC Furnace at Middleburg Ferrochrome  
Introduction  
The Process Principle of Ferroalloy Recovery  
Description of Electrical System in Place  
Designing the Electrical System According the Process' Need  
Keeping the Arc under Control  
Advantage of the DC-arc for Ferroalloy Recovery  
The Furnace' Conductive Bottom  
The Merits of the DC-arc  
Optimized Furnace Design  
Refractory Lifetime and General Maintenance  
Power Quality Considerations  
System Overview  
What is Flicker?  
Flicker Calculation and Measurements  
Harmonics  
Power Factor  
DC Reactor Size

Flicker Mitigation  
Production Increase  
Thermodynamics Applied to Ferroalloys Smelting  
Introduction  
Thermodynamic Data  
Chromium  
Titanium  
Niobium  
Vanadium  
Thermodynamic Slag Models and Computer Software  
Regular Solution Models  
Sublattice Models  
Quasi-chemical Models  
Other Models  
Optical Basicity  
Industrial Applications  
Dephosphorization of Ferromanganese Alloys  
Effect of Slag Composition  
Effect of Ferroalloy Composition  
Effect of Temperature  
Dephosphorization under Reducing Conditions  
Titanium Behavior Description in Silico-manganese Alloys  
Thermodynamic Modeling  
Industrial Application  
Conclusions  
Techno Economics of Recovering Ferroalloys from Dust and Slag  
Introduction  
Technology  
Metal Recovery from Slags  
Metal Separation  
Metal Fines Remelting/Refining  
Metal Recovery from EAF Dust  
Hydrometallurgical Processes  
Pyrometallurgical Processes  
Carbon Steel Dusts  
Stainless Steel Dusts  
Metal Fines Remelting/Refining  
Metal Recovery from EAF Dusts  
Pyrometallurgical Processes  
Carbon Steel Dusts  
Stainless Steel Dusts  
Conclusion  
Atomisation of Ferroalloys  
The Atomisation Process  
Why Atomise (or Granulate)?  
To Produce a Saleable, Dust-free Brittle Product  
To Produce a Small-sized Ductile Product  
To Produce a Reactive Intermediate Product  
To Produce a "Rapidly Solidified" Product  
To Produce Special Powder Products  
Atomisation Processes  
Water Atomisation  
Gas/Air Atomisation

Centrifugal Atomisation  
Atomised Products and Their Markets  
Ferrosilicon 15% Dense Medium  
Ferrosilicon 45% for the Welding Industry  
Ferromanganese for the Welding Industry  
Injectables  
Higher Melting Alloys  
Silicon  
Some considerations of future developments in ferroalloy furnaces  
Introduction  
Present Constraints on the Scale up of Submerged-arc Furnaces  
Scale up of the Electrical Circuit  
Scale up of the Electrodes  
The Supply of Electrical Energy  
The Smart Grid  
Some Possible Ways for the Ferroalloy Industry to Adapt to Changes  
Submerged-arc Furnaces  
Plasma Furnaces  
Constraints on Electrodes  
Swinging the Load  
A Larger Furnace  
Conclusions  
SHS-Technology of Ferroalloys Nitriding  
Introduction  
Ferrosilicon Nitride Synthesis  
Combustion Temperature  
Filtration Combustion  
The Phase Composition and the Structure of the Products  
The Industrial Production  
Conclusions  
Changing Requirements of Ferroalloys for Flat Products  
Introduction  
Manganese (MN) Ferroalloys  
Vanadium (V) Ferroalloy  
Other Ferroalloys  
Ti Sponge & Low Al Fe-Ti  
Fe-Al lump  
Fe-Nb lump  
Plasma Technology in Ferroalloy Processing  
Introduction  
Plasma - A Basic Definition  
Plasma Furnaces for Ferroalloys Smelting  
Process Chemistry Consideration  
Thermodynamics

Slag Chemistry  
Energy Related Issues  
Power Input and Furnace Type  
Energy Requirement and Distribution  
Energy Efficiency  
Advantages over Conventional Process  
Relevance in the Indian Context  
Application of Magnesia Ramming Material in Ferroalloy Refining Furnace

Introduction  
Development of Ramming Material  
Characteristics of Ramming Material in Ferroalloy Furnace  
High Smelting Temperature  
Good Sintering Property  
Homogeneous and Rational Structure  
Mineral Compositions and Effect of C2F  
Mineral Composition  
The Effect of C2F  
Furnace Dissection Analysis  
Analyses of Erosion Mechanism of Furnace Bottom  
Conclusions  
15. POLLUTION CONTROL IN FERROALLOY PRODUCTION  
Introduction  
Pollution in Ferroalloys Production  
Assessment of Pollution  
Selection of a Pollution Control Device  
Equipments Employed for Pollution Control in Ferroalloy Production  
Process of Pollution Control in Ferroalloys Production  
Illustrations of Stack emissions from a Few Ferroalloy Plants  
Emissions of Particulates and Dust from Ferroalloy Furnaces  
Illustrations of Pollution Control Systems in Ferroalloys Production  
Two Stage Venturi Scrubbing System for Air Pollution Control from Closed Ferroalloy Furnace  
Conclusions and Remarks

## About NIIR

**NIIR PROJECT CONSULTANCY SERVICES (NPCS)** is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

Our various services are: Detailed Project Report, Business Plan for Manufacturing Plant, Start-up Ideas, Business Ideas for Entrepreneurs, Start up Business Opportunities, entrepreneurship projects, Successful Business Plan, Industry Trends, Market Research, Manufacturing Process, Machinery, Raw Materials, project report, Cost and Revenue, Pre-feasibility study for Profitable Manufacturing Business, Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Business Opportunities, Investment Opportunities for Most Profitable Business in India, Manufacturing Business Ideas, Preparation of Project Profile, Pre-Investment and Pre-Feasibility Study, Market Research Study, Preparation of Techno-Economic Feasibility Report, Identification and Section of Plant, Process, Equipment, General Guidance, Startup Help, Technical and Commercial Counseling for setting up new industrial project and Most Profitable Small Scale Business.

NPCS also publishes various process technology, technical, reference, self employment and startup books, directory, business and industry database, bankable detailed project report, market research report on various industries, small scale industry and profit making business. Besides being used by manufacturers, industrialists and entrepreneurs, our publications are also used by professionals including project engineers, information services bureau, consultants and project consultancy firms as one of the input in their research.
