

# The Complete Technology Book on Wood and Its Derivatives

**Author:** NIIR Board of Consultants & Engineers

**Format:** Paperback

**ISBN:** 8186623922

**Code:** NI146

**Pages:** 502

**Price:** Rs. 1,100.00 US\$ 125.00

**Publisher:** National Institute of Industrial Research

Usually ships within **3** days

Wood has been used for hundreds of thousands of years for both fuel and as a construction material. Wood is an organic material, a natural composite of cellulose fibers (which are strong in tension) embedded in a matrix of lignin which resists compression. In the strict sense wood is produced as secondary xylem in the stems of trees (and other woody plants). Wood is used for millennia for many purposes, primarily as a fuel or as a construction material for making houses, tools, weapons, furniture, packaging, artworks, and paper. Wood is composed of cells, and the cell walls are composed of micro fibrils of cellulose and hemicellulose impregnated with lignin. The derivation of chemicals from wood is carried out wherever technical utility and economic conditions have combined to make it feasible. In a living tree it performs a support function, enabling woody plants to grow large or to stand up for themselves. It also mediates the transfer of water and nutrients to the leaves and other growing tissues. Wood may also refer to other plant materials with comparable properties, and to material engineered from wood, or wood chips or fiber. Wood and man have coexisted on this planet from the beginning and wood, as a renewable resource, has provided man with tools, weapons and shelter. Wood, when dry, has unique physical properties in that its tensile strength, bending strength, compression strength, impact resistance and hardness per unit weight are the highest of all construction materials. Wood polymer composites (WPC) are materials in which wood is impregnated with monomers that are then polymerized in the wood to tailor the material for special applications. The resulting properties of these materials, from lightness and enhanced mechanical properties to greater sustainability, has meant a growing number of applications in such areas as building, construction and automotive engineering. Other uses of wood in furniture, buildings, bridges, and as a source of energy are widely known. Wood is perhaps the most used component in our daily life, from home building and furnishings to everything from the tables to the doors are made of wood, and for the people living in colder climates, wood holds even greater importance.

Some of the fundamentals of the book are wood structure and chemical composition, chemical change in wood associated with wood fiberboard manufacture, chemical changes in wood effected by furnish preparation processes, bark extracts as bonding agent for particle board , wood polymer composites and their industrial applications , chemical reactions of preservatives with wood, activation of wood surface and nonconventional bonding , chemistry of weathering and protection , weathering of chemically modified woods, energy and chemicals from wood, charcoal and other chemicals, etc.

The developments in wood industry in the country are mainly attributed to the pioneering work carried in the field of wooden products. There are lots of chemicals and other products extracted from wood. This book contains processes of various wooden products and its derivatives. This is the first book of its kind which is invaluable resource to research scholars, entrepreneurs, technocrats, institutes, libraries and existing one.

# Contents

1. Wood: Structure and Chemical Composition
  - Gross Anatomical Features
  - Softwood Anatomy
  - Hardwood Anatomy
  - Cell Wall Structure
  - Chemical Composition of Cell Wall
2. Chemical Change in Wood Associated with Wood Fiberboard Manufacture
  - Furnish Preparation Processes
  - Wet Form Process Using Pressurized Refining.
  - Chemical Changes in Wood Effected by Furnish Preparation Processes
  - Board Conversion Processes
  - Wet Strength Properties of Hot Pressed Boards
  - Mechanism of Wet Strength Properties
  - Chemical Changes in Wood Effected by Board Conversion
3. Review of Particleboard Manufacture and Processing
  - Definition
  - Materials
  - Manufacturing
  - Particle Drying
  - Blending
  - Mat Formation
  - Finishing
  - Conclusion
4. Bark Extracts as Bonding Agent for Particle board
  - Material and Preparation
  - Bark Extracts
  - Three Layer Particleboard
  - Testing
5. Composition Boards Containing Bark
  - Amounts of Bark Available
  - Review of Efforts to Use Bark in Composition Boards
6. Polyurethane Foams from the Reaction of Bark and Diisocyanate
7. Wood Polymer Composites and their Industrial Applications
  - Chemistry of the Process
  - Impregnation Process
  - Monomers For Wood Polymer Composites
  - Physical Properties
  - Commercial Applications
  - Radiation Process.
  - World Wide Production
8. Interaction of Preservatives with Wood
  - Major Use Wood Preservatives
  - Minor Use Wood Preservatives
  - Copper Naphthenate.
  - Copper 8 Quinolinolate (Copper 8)
  - Tributyltin Oxide.
  - New Wood Preservatives
  - Preservative Distribution in Wood
  - Macrodistribution
  - Chemical Reactions of Preservatives with Wood

Inorganic Salt Preservatives.  
Organic Preservatives  
9. Chemistry of Adhesion  
Thermoplastic and Thermosetting Polymers  
Molecular Forces Between Adherend and Adhesive  
Adhesives for Wood  
Phenolic Resin Adhesives  
Resoles  
Novolak  
Resorcinol Resins  
Durability and Fracture Toughness  
Urea Formaldehyde and Melamine Formaldehyde Resins  
Isocyanate Based Adhesives  
Thermoplastic Adhesives  
Hot Melt Adhesives  
Acidity of Wood  
10. Activation of Wood Surface and Nonconventional Bonding  
Conditions and Methods of Wood Surface Formation.  
Direct Covalent Wood to Wood Bonding  
Bonding Through Intermediacy of Bifunctional Molecules  
Bonding by Intermediacy of a Covalently Attached Polymer  
Use of Oxidants  
Fundamental Studies  
Surface Activation.  
Hydrogen Peroxide Activation  
Plasma Activation  
Other Oxidizing Activators  
Nonconventional Bonding  
Direct Bonding  
Bifunctional Amines  
Bifunctional Acids  
Bifunctional Isocyanates  
Polymers  
Conclusions  
Addenda  
Wood Surface Studies  
Nonconventional Bonding with Acid Activation  
  
Nonconventional Bonding with Oxidant Activation  
Isocyanates  
Nonpolar Nonconventional Binders  
Other Methods  
Patents  
11. Chemistry of Weathering and Protection  
Backgrounds  
General Aspects of Wood Weathering  
Anatomic Structure of Wood and Its Weatherability  
Weathering Factors  
Other Factors  
Penetration of Light and Wood Surface Deterioration  
Property Changes During Weathering  
Chemical Changes  
Colour Changes

Physical Changes  
Microscopic Changes  
Transverse Section  
Radial Section  
Tangential Section  
Weathering of Wood Based Materials  
Plywood  
Reconstituted Panel Products  
Weathering of Chemically Modified Woods  
Free Radical Reactions in Lignin  
Free Radical Characteristics and Reactions in Weathered  
Participation of Singlet Oxygen in the Weathering Process  
Protection Against Weathering  
Film Forming Finishes  
Varnishes  
Natural Wood Finishes  
Film Forming  
Penetrating  
Transparent  
Semitransparent  
Protection of Wood Based Materials  
Wood Coating Interactions  
Summary and Future Considerations  
12. Biological Decomposition of Solid Wood  
Susceptibility and Resistance  
Types of Wood Deterioration  
Deterioration without Decomposition.  
Deterioration with Decomposition  
Mechanobiochemical Decomposition  
Biochemical Decomposition: The Wood Decays  
Types of Decay  
Progressive Changes in Chemical Composition  
Progressive Changes in Strength Properties  
Cellulose Decomposition  
Hemicellulose Decomposition  
Lignin Decomposition  
Control and Uses of Wood Decomposing Organisms  
Uses and Potential Uses  
13. The Chemistry of Pyrolysis and Combustion  
Formation of Volatile Products from Cellulose  
First Pathway  
  
Second Pathway  
Dehydration Reactions  
Formation and Properties of Char  
Char Formation  
Char Reactivity  
Combustion  
Combustibility  
14. Chemistry of Fire Retardancy  
Early Studies  
Protection of Wood with Fire Retardants  
Thermogravimetric Analysis (TG).

Differential Thermal Analysis and Differential Scanning Calorimetry

Tunnel Flame Spread Tests

Critical Oxygen Index Test

Test Methods for Related Properties

Smoke Production.

Heat Release Rate

Toxicity

Meehanisms of Fire Retardancy

Chemistry of Burning

Vapor phase Combusttion

Smoldering And Glowing

Theories of Fire Retardancy

Barrier Theories

Thermal Ttheories

Dilution or Noncombustible Gases Theories

Free Radical Trap Theories

Increased Char/Reduced Volatiles Theories

Reduced Heat Content of Volatiles Theories

Phosphorus Nitrogen Synergism Theories

Smoldering Inhibition Theories

Fire Retardant Formulations

Major Chemicals

Aluminum Trihydrate

Miscellaneous Chemicals

Leach resistant Chemicals

Amino resins

Future Research

Leach Resistant Compounds

Improved Fire Retardant Treatments for Panel Products

Effective Coating Systems

Reduced Smoke and Toxicity

Basic Mechanisms. Finally, further work

Summary

Mechanism.

Formulations

Future Research

## 15. ENERGY AND CHEMICALS FROM WOOD

Alternate Energy Sources

Avaiilable Forest Residues

Energy and Fuels from Wood

Direct Combustion

Sacchari fication Fermentation

Ethanol from wood

Thermal Decomposition

Charcoal and other Chemicals

Thermochemical Liquefaction

Furfural from Wood

Fiberbooard, particleboard, and flskeboard

Plywood

Laminated Lumber

Industrial Use of Energy

Energy Plantations

# About NIIR

**NIIR PROJECT CONSULTANCY SERVICES (NPCS)** is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

Our various services are: Detailed Project Report, Business Plan for Manufacturing Plant, Start-up Ideas, Business Ideas for Entrepreneurs, Start up Business Opportunities, entrepreneurship projects, Successful Business Plan, Industry Trends, Market Research, Manufacturing Process, Machinery, Raw Materials, project report, Cost and Revenue, Pre-feasibility study for Profitable Manufacturing Business, Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Business Opportunities, Investment Opportunities for Most Profitable Business in India, Manufacturing Business Ideas, Preparation of Project Profile, Pre-Investment and Pre-Feasibility Study, Market Research Study, Preparation of Techno-Economic Feasibility Report, Identification and Section of Plant, Process, Equipment, General Guidance, Startup Help, Technical and Commercial Counseling for setting up new industrial project and Most Profitable Small Scale Business.

NPCS also publishes various process technology, technical, reference, self employment and startup books, directory, business and industry database, bankable detailed project report, market research report on various industries, small scale industry and profit making business. Besides being used by manufacturers, industrialists and entrepreneurs, our publications are also used by professionals including project engineers, information services bureau, consultants and project consultancy firms as one of the input in their research.
