Natural dyes are dyes or colorants derived from plants, invertebrates, or minerals. The majority of natural dyes are vegetable dyes from plant sources. Dyeing is the process of imparting colors to a textile material. Different classes of dyes are used for different types of fiber and at different stages of the textile production process, from loose fibers through yarn and cloth to completed garments. There are technologies that manufacture the pigments for plastics, rubber and cosmetics. Therefore, dyes and pigments have a vast area of applications and have a huge demand in industry. Contrary to popular opinion, natural dyes are often neither safer nor more ecologically sound than synthetic dyes. They are less permanent, more difficult to apply, wash out more easily, and often involve the use of highly toxic mordant. Of course, the colour possibilities are far more limited; the color of any natural dye may be easily copied by mixing synthetic dyes, but many other colors are not easily obtained with natural dyes. However, some mordant are not very toxic, and the idea of natural dyestuffs is aesthetically pleasing. Applying natural dyes in your fabric production using enzymes will reduce your production cost and improve control. There are various kind of natural dyes; quinonoid dyes, cyanine dyes, azo dyes, biflavonyl dyes, ommochromes, anthraquinone, coprosma gesus etc. The use of natural dyes in cloth making can be seen as a necessary luxury to trigger off a change in habits. Dyes which stand out for their beauty and ecological attributes would never be employed on just any material but on noble fabrics such as wool, silk, linen or cotton, made to last more than one season. Market value will benefit from consumer preferences for environmentally friendly products, which will support consumption of high performance dyes and organic pigments.

This book basically deals with the use of carotenoids as food colours, bianthraquinones and related compounds, intermediate degradation products of biflavonyls, dyestuffs containing nuclear sulphon and carboxylic acid groups, quinonoid dyes, cyanine dyes, optical whitening agents, natural dyes for food, stability of natural colourants in foods effect of additives, pyrimidine pigments, the total synthesis of the polyene pigments, red pigment from geniposidic acid and amino compound, effect of acid and amine on the formation of red pigment from geniposidic acid, effect of the substituted position of amino group and chain length of amino compound etc.

Due to pollution problems in synthetic dyes and pigments industry, the whole world is shifting towards the manufacturing of natural dyes and pigments. The present book contains techniques of producing different natural dyes and pigments, which has huge demand in domestic as well as in foreign market. It is hoped that entrepreneurs, technocrats, existing units, institutional libraries will find this book very useful.

Contents

1. Ommochromes
Distribution
A. Ommatins
B. Ommins

Isolation and Purification
A. Ommatins
B. Ommins

Structure of the Ommochromes*
Xanthommatin
Ommatin D
Rhodommatin
Ommin A X

Biogenesis
2. Bisdehydrocanthaxanthin
3. Carotenoids Field
Carotenoid Biogenesis
Carotenoid Total Syntheses
The use of Carotenoids as Food Colours
4. Black pigments
Animal Pigments
Melanins
Sclerotization

Plant Pigments
Humic acids
1,8-Dihydroxynaphthalene polymers
5. Anthraquinone

Plant Pigments
Insect Pigments
6. Coprosma genus

7. Biantaquinones and related compounds
Skyrin
Oxyskyrin
Skyrinol
Iridoskyrin
Rugulosin
Luteoskyrin and Rubroskyrin
Lumiluteoskyrin
Flavoskyrin
Biogenesis

8. The Biflavonyl Pigments
The First Investigations
The Work of Nakazawa on Ginkgeting
The Work of the Bristol Group
On Ginkgetin and Isoginkgetin
The Work of Kariyone and Kawano on
Sciadopitysin, 1956
Further Work of Brispol Group on
Ginkgetin and Sciadopitysin
The Work of Kawano on Sciadopitysin and GINKGETIN, 1959
The Synthesis of Ginkgetin Tetramethyl ether, Nakazawa, 1959
The Structure of Ginkgeting
The Structure of Isoginkgetin
The Structure of Kayafayvone
The Structure of Sotetsuflavone
Summary of Biflavonyl Structures

Intermediate Degradation Products of Biflavonyls
Optical Inactivity of the Biflavonyls
The Structure of Hinokiflavone
Natural Occurrence of Biflavonyls
9. Azo dyes
10. Dyestuffs

Introduction
Primary Products for VS-Dyestuffs
   1. Methods of preparation
   2. Reactions

Processes for the Manufacture of VS-Dyestuffs
Fastness and Dyeing Properties of VS-Dyestuffs
   1. VS-Dyestuffs free from nuclear sulphonate and carboxylic acid groups
   2. Dyestuffs containing nuclear sulphonate and carboxylic acid groups

Summary
11. Disperse dyes
Light Fastness
Gas Fastness
Sublimation Fastness
Wash Fastness

Structural Modifications Leading to All-Round Fastness
12. Quinonoid dyes
13. Cyanine dyes
Chemistry of 2, 3-Dichloro-1,4-Naphthoquininone (I)
Chemistry of Chloranil (II)

Vat Dyes from Chloranil

Benzodipyrrocolinequinones Pyrrocolinequinones, Unsymmetrical Dipyrrrocolinequinones and Naphth of Uranopyrrocolinequinones
2-alkylamino-(arylamino)-3-chloro-1, 4-naphthoquinines And Di-3-(2-chloro-1, 4-naphthoquinonyl)-alkylamines And Arylamines
Cellulose Acetate Dyes From (i) And (ii)

Synthesis Of Non-coplanar Quinonoid Dyes
14. Fluorescent brightening agents
15. Optical whitening agents

Introduction

Physical Considerations of Fluorescence and Optical Whitening
Chemical constitution of Optical Whitening Agents
   1. Stilbene derivatives
   2. Benzidine derivatives
   3. Benzthiazole, benzoxazole and benziminazole derivatives
   4. Coumarins
   5. Pyrazolines
   6. Other types

Some Specific Applications of Optical Whitening Agents
   1. Soaps and detergents
   2. Textile applications
16. Natural dyes for Food
Natural Colourants
Natural Colours Presently Used in Food
Methods of Improving Natural Colourants
Novel Sources of Natural Colourants
  Microbial Sources
  Animal Sources
  Plant Source
  General Reviews
  Colourants from By-products
  Gardenia Extracts
  Other Sources
  Feasibility of Novel Sources
Stability of Natural Colourants in Foods Effect of Additives
  Ascorbic Acid and Derivatives
  Effect of Metal Ions
  Effect of Neutral Salts
  Effect of Organic Acids
  Photoprotection
  Miscellaneous Additives
  Conclusion
Stable Forms of Natural Colourants Found in Vivo
Stabilised Forms Of Natural Colourants Flavonoids
  Chemical Features Affecting Stability
    Self association
    Complex formation
    Copigmentation
    Condensation
    Chemical modifications
  Porphyrins
  Others
17. Pyran Pigments : I. Flavones and Flavonols
  Flavones
    Chrysin (IV)
  General Methods of Synthesis of Flavones
    A. From Aromatic Diketones
    B. From o-Hydroxyacetophenones
    C. From o-Hydroxychalkones
    D. From Phenols
  Flavonols
  The Wessely-moser and Related
  Rearrangements of Flavones
  The Formation of Salts by Flavones and Flavonols
  The Reduction of Flavones
  Isoflavones
    The Synthesis of Isoflavones
18. Pyran Pigments : II. Anthocyanins and Anthocyanidins
  Cyanidin (III)
  The Synthesis of Anthocyanidins
  The Synthesis of Anthocyanins
  Color Reactions of The Anthocyanidins and Anthocyanins
  Anhydrobases
    Carajurin (XCIX)
    Dracorubin (CXXV)
19. Pyran Pigments : III. Xanthones
   Ravenelin (II)
   Mangostin (XI)
   Pyran Pigments : IV. Rottlerin
   Pyran Pigments : V. Brazilin and Mematoxylin
   Brazilin (XXXII)
   Hematoxylin (XL)
   Trimethylbrazilone (XLI)
   Brazilein (LXXIX, R - H)
   The Synthesis Of Brazilin
   Pyrrole Pigments : I. The Porphyrins
   Hemin (cxxxvii)
   The Synthesis of Dipyrrylmethenes
   The Synthesis of Porphyrins
      The Structure of Hemin
   Pyrrole Pigments : II. Chlorophylls
   Pheoporphyrin, Chloroporphyrin, and Phylloerythrin
   The Vinyl Group in Chlorophyll
   The Structure of Chlorophyll
      Position of the Phytyl Group in Chlorophyll
      The Phase Test
   Allomerization
   Approaches to the Synthesis of Chlorophyll
   Chlorophyll-b
   Bacteriochlorophyll
   20. Pyrrole Pigments : III. The Bile Pigments
   Bilirubin (XXXII)
      Verdins
      Violins
      Bilenes
      Bilanes
   Stereochemistry and Tautomerism
   Complex Salts of the Bile Pigments
   Pyrrole Pigments : IV. Prodigiosin
   21. Pyrimidine Pigments : The pterins
   The Gmelin Reaction
   Pterorhodin
   22. Quinonoid Pigments
   Benzoquinonoid Pigments
      Perezone (XII)
      Polyporic Acid (XIV)
      Astromentin (XXVIII)
      Phoenicin (LXI)
   Napthaquinonoid Pigments
      Lapachol (LXXI)
      Eleutherin (CXXI)
      Alkannin and Shikonin (CXLIX)
   Anthraquinonoid Pigments
      Helminthosporin (CLVIII)
      Kermesic Acid (CLXI)
      Skyrin (CLXXVIII)
   Extended Quinone Pigments
      The Aphn Pigments
23. Polyene Pigments

Bixin (X) and Croceting (XI) the Carotenes
- b-Carotene (LV)
- Lycopene (LXXIII)

The Total Synthesis of the Polyene Pigments
Combination of Units in the Order C19 + C2 + C19
Combination of Units in the Order C16 + C8 + C16
Combination of units in the Order C14 + C12 + C14
Combination of Units in the Order C10 + C20 + C10

The Dehydro - Retrodehydrocarotenoids Epoxides and Furanoid Oxides

24. Anthocyanins from Indian varieties of Grapes

Material and Methods
- Extraction
- Purification
- Total anthocyanins
- Separation
- Partial hydrolysis of anthocyanin

Aglycone and sugar
- Acyl moieties
  - Spectral measurements
  - Thin layer chromatography

Results and Discussion
- Recovery of anthocyanin
- Separation of pigments by paper chromatography
- Absorption spectra of pigments
- Partial hydrolysis of anthocyanins
- Aglycones
- Sugar identification
- Acyl moieties

25. Red pigment from Geniposidic Acid and Amino Compound

Materials and Methods
- Preparation of geniposide (GS) and GSA solution
- Preparation of other iridoid compounds
- Enzyme and reagents
- General method of preparation of pigment
- Evaluation of pigment
- Identification and quantification of carbon dioxide
- HPLC and NMR measurement
- Structural relationship of iridoids to red pigment production
- Acidity and evolution of carbon dioxide
- Time course of enzymic reaction
- Acidity and atmosphere on the reaction
- HPLC monitoring of the pigment formation from GAA and a-alanine
- NMR monitoring of the pigment formation from GAA and methylamine

Results and Discussion
- The relationship between the evolution of carbon dioxide and reaction pH
- The process of formation of red pigment
Molecular mass and colour evaluation of red pigment derived from GAA and a-alanine
NMR spectroscopy of red pigment formed from GAA and methylamine
Monitoring of the reaction by NMR
The formation mechanism of red pigment
26. Effect of Acid and Amine on the formation of Red Pigment from Geniposidic Acid

Materials and Methods
Preparation of geniposide (GS)
Preparation of geniposidic acid (GSA) solution
Enzyme and reagents
General procedure for the red pigment formation
Evaluation of pigment
Kind of acid
The concentration of organic acid
The substituted position of amino group and chain length of amino compound
Kind of amino compound

Results and Discussion
Effect of acid
Effect of the substituted position of amino group and chain length of amino compound
Kind of amino compound

About NIIR

NIIR PROJECT CONSULTANCY SERVICES (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

NPCS also publishes varies process technology, technical, reference, self employment and startup books, directory, business and industry database, bankable detailed project report, market research report on various industries, small scale industry and profit making business. Besides being used by manufacturers, industrialists and entrepreneurs, our publications are also used by professionals including project engineers, information services bureau, consultants and project consultancy firms as one of the input in their research.

NIIR PROJECT CONSULTANCY SERVICES, 106-E, Kamla Nagar, New Delhi-110007, India. Email: npcs.india@gmail.com Website: NIIR.org
