Natural dyes are dyes or colorants derived from plants, invertebrates, or minerals. The majority of natural dyes are vegetable dyes from plant sources. Dyeing is the process of imparting colors to a textile material. Different classes of dyes are used for different types of fiber and at different stages of the textile production process, from loose fibers through yarn and cloth to completed garments. There are technologies that manufacture the pigments for plastics, rubber and cosmetics. Therefore; dyes and pigments have a vast area of applications and have a huge demand in industry. Contrary to popular opinion, natural dyes are often neither safer nor more ecologically sound than synthetic dyes. They are less permanent, more difficult to apply, wash out more easily, and often involve the use of highly toxic mordant. Of course, the colour possibilities are far more limited; the color of any natural dye may be easily copied by mixing synthetic dyes, but many other colors are not easily obtained with natural dyes. However, some mordant are not very toxic, and the idea of natural dyestuffs is aesthetically pleasing. Applying natural dyes in your fabric production using enzymes will reduce your production cost and improve control. There are various kind of natural dyes; quinonoid dyes, cyanine dyes, azo dyes, biflavonyl dyes, omochromes, anthraquinone, coprosma gesus etc. The use of natural dyes in cloth making can be seen as a necessary luxury to trigger off a change in habits. Dyes which stand out for their beauty and ecological attributes would never be employed on just any material but on noble fabrics such as wool, silk, linen or cotton, made to last more than one season. Market value will benefit from consumer preferences for environmentally friendly products, which will support consumption of high performance dyes and organic pigments.

This book basically deals with the use of carotenoids as food colours , bianthraquinones and related compounds, intermediate degradation products of biflavonols, dyestuffs containing nuclear sulphonie and carboxylic acid groups, quinonoid dyes, cyanine dyes, optical whitening agents, natural dyes for food, stability of natural colourants in foods effect of additives, pyrimidine pigments, the total synthesis of the polyene pigments, red pigment from geniposidic acid and amino compound, effect of acid and amine on the formation of red pigment from geniposidic acid, effect of the substituted position of amino group and chain length of amino compound etc.

Due to pollution problems in synthetic dyes and pigments industry, the whole world is shifting towards the manufacturing of natural dyes and pigments. The present book contains techniques of producing different
natural dyes and pigments, which has huge demand in domestic as well as in foreign market. It is hoped that entrepreneurs, technocrats, existing units, institutional libraries will find this book very useful.

Contents

1. Ommochromes
   Distribution
   A. Ommatin
   B. Ommin
   Isolation and Purification
   A. Ommatin
   B. Ommin
   Structure of the Ommochromes*  
     Xanthommatin
     Ommatin D
     Rhodommatin
     Ommin A X
   Biogenesis
2. Bisdehydrocanthaxanthin
3. Carotenoids Field
   Carotenoid Biogenesis
   Carotenoid Total Syntheses
   The use of Carotenoids as Food Colours
4. Black pigments
   Animal Pigments
     Melanins
     Sclerotization
   Plant Pigments
     Humic acids
     1,8-Dihydroxynaphthalene polymers
5. Anthraquinone
   Plant Pigments
   Insect Pigments
6. Coprosma genus
7. Blantheraquinones and related compounds
   Skyrin
   Oxyskyrin
   Skyrinol
   Iridoskyrin
   Rugulosin
   Luteoskyrin and Rubroskyrin
   Lumiluteoskyrin
   Flavoskyrin
   Biogenesis
8. The Biflavonyl Pigments
   The First Investigations
   The Work of Nakazawa on Ginkgeting
   The Work of the Bristol Group
   On Ginkgetin and Isoginkgetin
   The Work of Kariyone and Kawano on
   Sciadopitysin, 1956
Further Work of Brispol Group on Ginkgetin and Sciadopitysin
The Work of Kawano on Sciadopitysin and GINKGETIN, 1959
The Synthesis of Ginkgetin Tetramethyl ether, Nakazawa, 1959
The Structure of Ginkgeting
The Structure of Isoginkgetin
The Structure of Kayafavone
The Structure of Sotetsuflavone
Summary of Biflavonyl Structures

Intermediate Degradation Products of Biflavonols
Optical Inactivity of the Biflavonols
The Structure of Hinokiflavone
Natural Occurrence of Biflavonols
9. Azo dyes
10. Dyestuffs
Introduction
Primary Products for VS-Dyestuffs
  1. Methods of preparation
  2. Reactions
Processes for the Manufacture of VS-Dyestuffs
Fastness and Dyeing Properties of VS-Dyestuffs
  1. VS-Dyestuffs free from nuclear sulphonic and carboxylic acid groups
  2. Dyestuffs containing nuclear sulphonic and carboxylic acid groups
Summary
11. Disperse dyes
Light Fastness
Gas Fastness
Sublimation Fastness
Wash Fastness
Structural Modifications Leading to All-Round Fastness
12. Quinonoid dyes
13. Cyanine dyes
Chemistry of 2, 3-Dichloro-1,4-Naphthoquininone (I)
Chemistry of Chloranil (II)
Vat Dyes from Chloranil
Benzodipyrrulinalquinones Pyrrocolinequinones,
Unsymmetrical Dipyrrulinalquinones and Naph of Uranopyrrulinalquinones
2-alkylamino-(arylamino)-3-chloro-1, 4-naphthoquinones And Di-3-(2-chloro-1,
4-naphthoquinonyl)-alkylamines And Arylamines
Cellulose Acetate Dyes From (i) And (ii)
Synthesis Of Non-coplanar Quinonoid Dyes
14. Fluorescent brightening agents
15. Optical whitening agents
Introduction
Physical Considerations of Fluorescence and Optical Whitening
Chemical constitution of Optical Whitening Agents
  1. Stilbene derivatives
  2. Benzidine derivatives
  3. Benzthiazole, benzoxazole and benziminazole derivatives
4. Coumarins
5. Pyrazolines
6. Other types

Some Specific Applications of Optical Whitening Agents
1. Soaps and detergents
2. Textile applications
16. Natural dyes for Food

Natural Colourants
   Natural Colours Presently Used in Food
   Methods of Improving Natural Colourants

Novel Sources of Natural Colourants
   Microbial Sources
   Animal Sources
   Plant Source
   General Reviews
   Colourants from By-products
   Gardenia Extracts
   Other Sources
   Feasibility of Novel Sources

Stability of Natural Colourants in Foods
Effect of Additives
   Ascorbic Acid and Derivatives
   Effect of Metal Ions
   Effect of Neutral Salts
   Effect of Organic Acids
   Photoprotection
   Miscellaneous Additives

Conclusion

Stable Forms of Natural Colourants Found in Vivo
Stabilised Forms Of Natural Colourants
   Flavonoids
      Chemical Features Affecting Stability
      Self association
      Complex formation
      Copigmentation
      Condensation
      Chemical modifications

Porphyrrins
Others

17. Pyran Pigments : I. Flavones and Flavonols
   Flavones
      Chrysin (IV)
   General Methods of Synthesis of Flavones
      A. From Aromatic Diketones
      B. From o-Hydroxyacetophenones
      C. From o-Hydroxychalkones
      D. From Phenols
   Flavonoids
      The Wessely-moser and Related
      Rearrangements of Flavones
      The Formation of Salts by Flavones and Flavonols
      The Reduction of Flavones
   Isoflavones
      The Synthesis of Isoflavones
18. Pyran Pigments : II. Anthocyanins and Anthocyanidins
Cyanidin (III)
The Synthesis of Anthocyanidins
The Synthesis of Anthocyanins
Color Reactions of The Anthocyanidins and Anthocyanins
Anhydrobases
Carajurin (XCIX)
Dracorubin (CXXV)
19. Pyran Pigments : III. Xanthones
Ravenelin (II)
Mangostin (XI)
Pyran Pigments : IV. Rottlerin
Pyran Pigments : V. Brazilin and Mematoxylin
Brazilin (XXXII)
Hematoxylin (XL)
Trimethylbrazilone (XLI)
Brazilein (LXXIX, R - H)
The Synthesis Of Brazilin
Pyrrole Pigments : I. The Porphyrins
Hemin (cxxxvii)
The Synthesis of Dipyrrylmethenes
The Synthesis of Porphyrins
The Structure of Hemin
Pyrrole Pigments : II. Chlorophylls
Pheoporphyrin, Chloroporphyrin, and Phylloerythrin
The Vinyl Group in Chlorophyll
The Structure of Chlorophyll
Position of the Phytyl Group in Chlorophyll
The Phase Test
Allomerization
Approaches to the Synthesis of Chlorophyll
Chlorophyll-b
Bacteriochlorophyll
20. Pyrrole Pigments : III. The Bile Pigments
Bilirubin (XXXII)
Verdins
Violins
Bilenes
Bilanes
Stereochemistry and Tautomerism
Complex Salts of the Bile Pigments
Pyrrole Pigments : IV. Prodigiosin
21. Pyrimidine Pigments : The pterins
The Gmelin Reaction
Pterorhodon
22. Quinonoid Pigments
Benzoquinonoid Pigments
Perezone (XII)
Polyporic Acid (XIV)
Astromentin (XXVIII)
Phoenicin (LXI)
Napthaquinonoid Pigments
Lapachol (LXXI)
Eleutherin (CXXI)
Alkannin and Shikonin (CXLIX)
Anthraquinonoid Pigments
Helminthosporin (CLVIII)
Kermesic Acid (CLXI)
Skyrin (CLXXVIII)
Extended Quinone Pigments
The Aphin Pigments
Erythroaphin-fb (CCXVI) or (CCXVII)
Hypericin (CCXXV)
23. Polyene Pigments
Bixin (X) and Croceting (XI) the Carotenes
b-Carotene (LV)
Lycopene (LXXIII)
The Total Synthesis of the Polyene Pigments
Combination of Units in the Order C19 + C2 + C19
Combination of Units in the Order C16 + C8 + C16
Combination of units in the Order C14 + C12 + C14
Combination of Units in the Order C10 + C20 + C10
The Dehydro - Retrodehydrocarotenoids Epoxides
and Furanoid Oxides
24. Anthocyanins from Indian varieties of Grapes
Material and Methods
Extraction
Purification
Total anthocyanins
Separation
Partial hydrolysis of anthocyanin
Aglycone and sugar
Acyl moieties
Spectral measurements
Thin layer chromatography
Results and Discussion
Recovery of anthocyanin
Separation of pigments by paper chromatography
Absorption spectra of pigments
Partial hydrolysis of anthocyanins
Aglycones
Sugar identification
Acyl moieties
25. Red pigment from Geniposidic Acid and Amino Compound
Materials and Methods
Preparation of geniposide (GS) and GSA solution
Preparation of other iridoid compounds
Enzyme and reagents
General method of preparation of pigment
Evaluation of pigment
Identification and quantification of carbon dioxide
HPLC and NMR measurement
Structural relationship of iridoids to red pigment production
Acidity and evolution of carbon dioxide
Time course of enzymic reaction
Acidity and atmosphere on the reaction
HPLC monitoring of the pigment formation from GAA and α-alanine
NMR monitoring of the pigment formation from GAA and methylamine
Results and Discussion
  The relationship between the evolution of carbon dioxide and reaction pH
  The process of formation of red pigment
  Molecular mass and colour evaluation of red pigment derived from GAA and α-alanine
NMR spectroscopy of red pigment formed from GAA and methylamine
Monitoring of the reaction by NMR
  The formation mechanism of red pigment
26. Effect of Acid and Amine on the formation of Red Pigment from Geniposidic Acid
Materials and Methods
  Preparation of geniposide (GS)
  Preparation of geniposidic acid (GSA) solution
  Enzyme and reagents
  General procedure for the red pigment formation
  Evaluation of pigment
  Kind of acid
  The concentration of organic acid
  The substituted position of amino group and chain length
  of amino compound
  Kind of amino compound
Results and Discussion
  Effect of acid
  Effect of the substituted position of amino group and chain length
  of amino compound
  Kind of amino compound

About NIIR

NIIR PROJECT CONSULTANCY SERVICES (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

NPCS also publishes various process technology, technical, reference, self employment and startup books, directory, business and industry database, bankable detailed project report, market research report on various industries, small scale industry and profit making business. Besides being used by
manufacturers, industrialists and entrepreneurs, our publications are also used by professionals including project engineers, information services bureau, consultants and project consultancy firms as one of the input in their research.
