Natural dyes are dyes or colorants derived from plants, invertebrates, or minerals. The majority of natural dyes are vegetable dyes from plant sources. Dyeing is the process of imparting colors to a textile material. Different classes of dyes are used for different types of fiber and at different stages of the textile production process, from loose fibers through yarn and cloth to completed garments. There are technologies that manufacture the pigments for plastics, rubber and cosmetics. Therefore; dyes and pigments have a vast area of applications and have a huge demand in industry. Contrary to popular opinion, natural dyes are often neither safer nor more ecologically sound than synthetic dyes. They are less permanent, more difficult to apply, wash out more easily, and often involve the use of highly toxic mordant. Of course, the colour possibilities are far more limited; the color of any natural dye may be easily copied by mixing synthetic dyes, but many other colors are not easily obtained with natural dyes. However, some mordant are not very toxic, and the idea of natural dyestuffs is aesthetically pleasing. Applying natural dyes in your fabric production using enzymes will reduce your production cost and improve control. There are various kind of natural dyes; quinonoid dyes, cyanine dyes, azo dyes, biflavonyl dyes, omochromes, anthraquinone, coprosma gesus etc. The use of natural dyes in cloth making can be seen as a necessary luxury to trigger off a change in habits. Dyes which stand out for their beauty and ecological attributes would never be employed on just any material but on noble fabrics such as wool, silk, linen or cotton, made to last more than one season. Market value will benefit from consumer preferences for environmentally friendly products, which will support consumption of high performance dyes and organic pigments.

This book basically deals with the use of carotenoids as food colours, bianthraquinones and related compounds, intermediate degradation products of biflavonyls, dyestuffs containing nuclear sulphonic and carboxylic acid groups, quinonoid dyes, cyanine dyes, optical whitening agents, natural dyes for food, stability of natural colourants in foods effect of additives, pyrimidine pigments, the total synthesis of the polyene pigments, red pigment from geniposidic acid and amino compound, effect of acid and amine on the formation of red pigment from geniposidic acid, effect of the substituted position of amino group and chain length of amino compound etc.

Due to pollution problems in synthetic dyes and pigments industry, the whole world is shifting towards the manufacturing of natural dyes and pigments. The present book contains techniques of producing different natural dyes and pigments, which has huge demand in domestic as well as in foreign market. It is hoped that entrepreneurs, technocrats, existing units, institutional libraries will find this book very useful.

Contents

1. Ommochromes
Distribution
A. Ommatins
B. Ommins
Isolation and Purification
A. Ommatins
B. Ommins
Structure of the Ommochromes*
  Xanthommatin
  Ommatin D
  Rhodommatin
  Ommin A X
Biogenesis
2. Bisdehydrocanthaxanthin
3. Carotenoids Field
  Carotenoid Biogenesis
  Carotenoid Total Syntheses
  The use of Carotenoids as Food Colours
4. Black pigments
  Animal Pigments
  Melanins
  Sclerotization
Plant Pigments
  Humic acids
  1,8-Dihydroxynaphthalene polymers
5. Anthraquinone
  Plant Pigments
  Insect Pigments
6. Coprosma genus
7. Bianthraquinones and related compounds
  Skyrin
  Oxyskyrin
  Skyrinol
  Iridoskyrin
  Rugulosin
  Luteoskyrin and Rubroskyrin
  Lumiluteoskyrin
  Flavoskyrin
  Biogenesis
8. The Biflavonyl Pigments
  The First Investigations
  The Work of Nakazawa on Ginkgetin
  The Work of the Bristol Group
  On Ginkgetin and Isoginkgetin
  The Work of Kariyone and Kawano on
  Sciadopitysin, 1956
  Further Work of Brispol Group on
  Ginkgetin and Sciadopitysin
  The Work of Kawano on Sciadopitysin and GINKGETIN, 1959
  The Synthesis of Ginkgetin Tetramethyl ether, Nakazawa, 1959
  The Structure of Ginkgetin
  The Structure of Isoginkgetin
  The Structure of Kayafyavone
  The Structure of Sotetsuflavone

NIIR Project Consultancy Services (NPCS) 2/7
Summary of Biflavonyl Structures

Intermediate Degradation Products of Biflavonyls
Optical Inactivity of the Biflavonyls
The Structure of Hinokiflavone
Natural Occurrence of Biflavonyls
9. Azo dyes
10. Dyestuffs

Introduction

Primary Products for VS-Dyestuffs
1. Methods of preparation
2. Reactions

Processes for the Manufacture of VS-Dyestuffs

Fastness and Dyeing Properties of VS-Dyestuffs
1. VS-Dyestuffs free from nuclear sulphonlic and carboxylic acid groups
2. Dyestuffs containing nuclear sulphonlic and carboxylic acid groups

Summary
11. Disperse dyes
Light Fastness
Gas Fastness
Sublimation Fastness
Wash Fastness

Structural Modifications Leading to All-Round Fastness
12. Quinonoid dyes
13. Cyanine dyes
Chemistry of 2, 3-Dichloro-1,4-Naphthoquininone (I)
Chemistry of Chloranil (II)

Vat Dyes from Chloranil
Benzodipyrrocolinequinones Pyrrocolinequinones,
Unsymmetrical Dipyrrrocolinequinones and Naphth of Uranopyrrocolinequinones
2-alkylamino-(arylamino)-3-chloro-1,
4-naphthroquinones And Di-3-(2-chloro-1,
4-naphthroquinonyl)-alkylamines And Arylamines
Cellulose Acetate Dyes From (i) And (ii)

Synthesis Of Non-coplanar Quinonoid Dyes
14. Fluorescent brightening agents
15. Optical whitening agents

Introduction

Physical Considerations of Fluorescence and Optical Whitening
Chemical constitution of Optical Whitening Agents
1. Stilbene derivatives
2. Benzidine derivatives
3. Benzthiazole, benzoxazole and benziminazole derivatives
4. Coumarins
5. Pyrazolines
6. Other types

Some Specific Applications of Optical Whitening Agents
1. Soaps and detergents
2. Textile applications
16. Natural dyes for Food
Natural Colourants

Natural Colours Presently Used in Food
Methods of Improving Natural Colourants
Novel Sources of Natural Colourants

Microbial Sources
Animal Sources
Plant Source
General Reviews
Colourants from By-products
Gardenia Extracts
Other Sources
Feasibility of Novel Sources

Stability of Natural Colourants in Foods
Effect of Additives
Ascorbic Acid and Derivatives
Effect of Metal Ions
Effect of Neutral Salts
Effect of Organic Acids
Photoprotection
Miscellaneous Additives

Conclusion

Stable Forms of Natural Colourants Found in Vivo
Stabilised Forms Of Natural Colourants
Flavonoids
Chemical Features Affecting Stability
Self association
Complex formation
Copigmentation
Condensation
Chemical modifications

Porphyrs

Others

17. Pyran Pigments : I. Flavones and Flavonols
Flavones
Chrysin (IV)

General Methods of Synthesis of Flavones
A. From Aromatic Diketones
B. From o-Hydroxyacetophenones
C. From o-Hydroxychalkones
D. From Phenols

Flavonols
The Wessely-moser and Related
Rearrangements of Flavones
The Formation of Salts by Flavones and Flavonols
The Reduction of Flavones

Isoflavones
The Synthesis of Isoflavones

18. Pyran Pigments : II. Anthocyanins and Anthocyanidins
Cyanidin (III)

The Synthesis of Anthocyanidins
The Synthesis of Anthocyanins
Color Reactions of The Anthocyanidins and Anthocyanins
Anhydrobases
Carajurin (XCIX)
Dracorubin (CXXV)
19. Pyran Pigments: III. Xanthones
Ravenelin (II)
Mangostin (XI)

Pyran Pigments: IV. Rottlerin

Pyran Pigments: V. Brazilin and Mematoxylin
Brazilin (XXXII)
Hematoxylin (XL)

Trimethylbrazilone (XLI)
Braziline (LXXIX, R - H)
The Synthesis Of Brazilin

Pyrrole Pigments: I. The Porphyrins
Hemin (cxxxvii)
The Synthesis of Dipyrrylmethenes

The Synthesis of Porphyrins

The Structure of Hemin

Pyrrole Pigments: II. Chlorophylls
Pheoporphyrin, Chloroporphyrin, and Phylloerythrin

The Vinyl Group in Chlorophyll
The Structure of Chlorophyll

Position of the Phytyl Group in Chlorophyll
The Phase Test

Allomerization
Approaches to the Synthesis of Chlorophyll
Chlorophyll-b

Bacteriochlorophyll

20. Pyrrole Pigments: III. The Bile Pigments
Bilirubin (XXXII)

Verdins
Violins
Bilenes
Bilanes

Stereochromy and Tautomerism
Complex Salts of the Bile Pigments

Pyrrole Pigments: IV. Prodigiosin

21. Pyrimidine Pigments: The pterins
The Gmelin Reaction

Pterorhodin

22. Quinonoid Pigments

Benzoquinonoid Pigments
Perezone (XII)
Polyporic Acid (XIV)
Astromentin (XXVIII)
Phoenicin (LXI)

Napthaquinonoid Pigments
Lapachol (LXXI)
Eleutherin (CXXI)
Alkannin and Shikonin (CXLIX)

Anthraquinonoid Pigments
Helminthosporin (CLVIII)
Kermesic Acid (CLXI)
Skyrin (CLXXXVIII)

Extended Quinone Pigments
The Aphin Pigments
Erythroaphin-fb (CCXVI) or (CCXVII)
Hypericin (CCXXV)

23. Polyene Pigments

Bixin (X) and Croceting (XI) the Carotenes
b-Carotene (LV)
Lycopene (LXXIII)
The Total Synthesis of the Polyene Pigments
Combination of Units in the Order C19 + C2 + C19
Combination of Units in the Order C16 + C8 + C16
Combination of units in the Order C14 + C12 + C14
Combination of Units in the Order C10 + C20 + C10

The Dehydro - Retrodehydrocarotenoids Epoxides
and Furanoid Oxides

24. Anthocyanins from Indian varieties of Grapes

Material and Methods
Extraction
Purification
Total anthocyanins
Separation
Partial hydrolysis of anthocyanin
Aglycone and sugar
Acyl moieties
Spectral measurements
Thin layer chromatography

Results and Discussion
Recovery of anthocyanin
Separation of pigments by paper chromatography
Absorption spectra of pigments
Partial hydrolysis of anthocyanins
Aglycones
Sugar identification
Acyl moieties

25. Red pigment from Geniposidic Acid and Amino Compound

Materials and Methods
Preparation of geniposide (GS) and GSA solution
Preparation of other iridoid compounds
Enzyme and reagents
General method of preparation of pigment
Evaluation of pigment
Identification and quantification of carbon dioxide
HPLC and NMR measurement
Structural relationship of iridoids to red pigment production
Acidity and evolution of carbon dioxide
Time course of enzymic reaction
Acidity and atmosphere on the reaction
HPLC monitoring of the pigment formation from GAA
and a-alanine
NMR monitoring of the pigment formation from GAA
and methylamine

Results and Discussion
The relationship between the evolution of carbon dioxide
and reaction pH
The process of formation of red pigment
Molecular mass and colour evaluation of red pigment derived from GAA and α-alanine
NMR spectroscopy of red pigment formed from GAA and methylamine
Monitoring of the reaction by NMR
The formation mechanism of red pigment

26. Effect of Acid and Amine on the formation of Red Pigment from Geniposidic Acid

Materials and Methods
Preparation of geniposide (GS)
Preparation of geniposidic acid (GSA) solution
Enzyme and reagents
General procedure for the red pigment formation
Evaluation of pigment
Kind of acid
The concentration of organic acid
The substituted position of amino group and chain length of amino compound
Kind of amino compound

Results and Discussion
Effect of acid
Effect of the substituted position of amino group and chain length of amino compound
Kind of amino compound

About NIIR

NIIR PROJECT CONSULTANCY SERVICES (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

NPCS also publishes various process technology, technical, reference, self employment and startup books, directory, business and industry database, bankable detailed project report, market research report on various industries, small scale industry and profit making business. Besides being used by manufacturers, industrialists and entrepreneurs, our publications are also used by professionals including project engineers, information services bureau, consultants and project consultancy firms as one of the input in their research.

NIIR PROJECT CONSULTANCY SERVICES , 106-E, Kamla Nagar, New Delhi-110007, India. Email: npcs.india@gmail.com Website: NiIR.org
