

# The Complete Technology Book on Plastic Films, HDPE and Thermoset Plastics

**Author:** NIIR Board of Consultants & Engineers

**Format:** Paperback

**ISBN:** 8178330113

**Code:** NI182

**Pages:** 608

**Price:** Rs. 1,175.00 US\$ 31.75

**Publisher:** Asia Pacific Business Press Inc.

Usually ships within 5 days

Plastic Films, HDPE and Thermoset Plastics are now an accepted part of the industrial and domestic scenes but this growth has been comparatively recent. Plastic films are typically used for sealing food items in containers to keep them fresh over a longer period of time. Plastic wrap, typically sold on rolls in boxes with a cutting edge, clings to many smooth surfaces and can thus remain tight over the opening of a container without adhesive or other devices. The past several years have seen numerous plastic films developed for the packaging industry, the most used today being polyethylene. Cast polypropylene film, like polyethylene film is unoriented (not stretched), but it was found that an improved film could be obtained by orientation (stretching the cast in one or more directions). Biaxial orientation is the process whereby the continuous cast film or sheet of plastic is heated up to brings it to a temperature that makes it stretchable. BOPP film possesses superior tensile strength, flexibility, toughness, shrink ability, good barrier and optical characteristics. The use of polyethylene terephthalate film is increasing considerably in recent years in videos audio magnetic tapes, computer tapes, photo and X ray films, power capacitors, insulation tapes and metalling for artificial zari. High density polyethylene (HDPE) or polyethylene high density (PEHD) is a polyethylene thermoplastic made from petroleum. The major applications of HDPE are in the manufacturing of containers, pipes, house wares, toys, filament, woven sacks, film, wire and cable insulation. HDPE is lighter than water, and can be moulded, machined, and joined together using welding (difficult to glue). Thermoset, or thermosetting plastics are synthetic materials that strengthen during being heated, but cannot be successfully remolded or reheated after their initial heat forming. This is in contrast to thermoplastics, which soften when heated and harden and strengthen after cooling. Thermoplastics can be heated, shaped and cooled as often as necessary without causing a chemical change, while thermosetting plastics will burn when heated after the initial molding. Additionally, thermoplastics tend to be easier to mold than thermosetting plastics, which also take a longer time to produce (due to the time it takes to cure the heated material).

Some of the astonishing fundamentals of the book are salient features of contemporary, technology and current research, three basic processes: advances, modern polyethylene, processes using high yield catalysts, solution polymerization processes, polyolefins, low density polyethylene, polyvinylidene chloride (PVDC), vinyl chloride/vinyl acetate copolymers, polyvinyl acetate, polyvinyl alcohol, physical and chemical properties, manufacturing methods, extrusion of film, slit die extrusion (flat film extrusion), comparison of blow and cast film processes, water cooled polypropylene film, calendaring, solvent, casting, casting of regenerated cellulose film, orientation of film, expanded films, plastics net from film, unsaturated polyester and vinyl ester resins, thermoset polyurethanes, guidelines and theories in compounding polyurethane elastomers, compounding for thermoset polyurethane elastomers, cellulose and cellulose derivatives, thermoplastic polymers etc.

The present books offer an up to date overview of the processing of plastic films, HDPE and thermoset

plastics. This book is suitable for entrepreneurs, researchers, professionals, technical institutions etc.

## Contents

### CHAPTER 1 BOPP FILMS

- Background
- Structural Development of Plastics in India
- History of films
- Film Properties
- Applications of Films
- Process of Manufacture
- Tenter Process
- Comparison of the processes
- Polyester Films
- Raw materials
- Capital equipment
- General

### CHAPTER 2 SALIENT FEATURES OF CONTEMPORARY TECHNOLOGY AND CURRENT RESEARCH

- Introduction
- Three basic processes: Advances
- Modern polyethylene processes using high yield catalysts
- Solution polymerization processes
- Slurry processes
- Gas phase processes
- Processing
- Comparative evaluation of contemporary technologies
- Process selection based on capability
- Latest development

### CHAPTER 3 POLYOLEFINS

- Low density polyethylene
- Properties
- Uses 120
- Irradiated Polyethylene
- High density polyethylene
- Properties
- Uses 123
- Polypropylene
- Properties
- Poly (Methyl pentene) (TPX)
- Ethylene/vinyl acetate copolymers (EVA)
- Properties
- Poly (BUTENE-1)
- Properties
- Uses 129
- Melt flow index (MFI)

### CHAPTER 4 VINYL

- Polyvinyl Chloride (PVC)
- Properties
- Polyvinylidene chloride (PVDC)

Vinyl chloride/Vinyl acetate copolymers  
Polyvinyl acetate  
Polyvinyl alcohol

## CHAPTER 5 MECHANICAL PROPERTIES

Tensile and yield strength elongation and young's modulus  
Test Methods  
Burst strength  
Impact strength  
Impact Fatigue  
Tear strength  
Puncture penetration test  
Stiffness  
Flex resistance  
Coefficient of friction  
Blocking

## CHAPTER 6 PHYSICAL AND CHEMICAL PROPERTIES

Optical properties  
Light transmission  
'See-Through' Clarity  
Haze  
Gloss  
Permeability  
Water vapour permeability  
Gas Permeability  
Odour Permeability  
Density  
Heat sealability  
Dimensional stability  
Water absorption  
Effect of chemicals  
Effect of Light  
Effect of Temperature  
High Temperature  
Low Temperature  
Flammability

## CHAPTER 7 MANUFACTURING METHODS

Extrusion of Film  
Slit Die Extrusion (Flat Film Extrusion)  
Comparison of Blow and Cast Film Processes  
Water Cooled Polypropylene Film  
Calendering  
Solvent Casting  
Casting of regenerated cellulose film  
Orientation of film  
Expanded films  
Plastics Net From Film

## CHAPTER 8 HEALTH SAFETY OF PLASTICS FILMS

Overall system  
Base Lines for Evaluation

Food Spoilage  
Toxicity and Adulteration  
Interactions  
Safety evaluation Mass transfer  
Law  
Licensing Type Systems  
International trade  
Individual countries  
United Kingdom  
USA

## CHAPTER 9 ODOUR AND TAINT IN PLASTICS FILMS

Introduction to organolepsis and tainting  
Causes of tainting  
Loss of Volatile Material From Food to Environment  
Diffusion of Volatiles, additives, and Volatile Residual Reactants  
from Plastics to Food  
Vapour From Environment t to Food  
Micro-organisms to Food  
Marco-Organisms to Food  
Radiation from Environment to Food Stuff  
Assessment  
Samples  
Food  
Tests Methodology  
Remedies  
Masking and Counteraction  
Conclusions

## CHAPTER 10 SEALING OF FILMS

Mechanical methods  
Heat sealing  
Sealing of oriented film  
High frequency heating  
Ultrasonic sealing  
Adhesives  
Choice of method

## CHAPTER 11 PRINTING ON PASTICS FILMS

Pre treatment  
Solvent treatment  
Chemical treatments  
Flame treatment  
Electrical treatment  
Tests for efficiency of pre- treatment  
Method of Printing  
Screen printing  
Letterpress  
Flexographic printing  
Photogravure printing  
Hot stamping  
Electrostatic printing  
Printing inks  
Vaccum metallisation

## CHAPTER 12 WRAPPING EQUIPMENT

- Wrapping with thermoplastics films
- Feeding the Wrapping Material
- Forming the pack
- Closing the pack
- Continuous wrapping machines
- Pouch making equipment
- Sachet making machines
- Vaccum and gas packaging
- Shrink wrapping
- Scope of Process
- Types of Shrink Wrap
- Shrink wrapping equipment
- Tray Erection
- Film Wrapping and Sealing
- Shrink Tunnels
- Properties of heat shrinkable films
- Shrink Temperature
- Degree of Shrinkage
- Shrink Tension
- Pallet overwrapping
- General advantages and problems

## CHAPTER 13 UNSATURATED POLYESTER AND VINYL ESTER RESINS

- Unsaturated polyesters
- Vinyl ester resins
- Compounding of unsaturated polyester and vinyl ester resins
- Applicable manufacturing processes
- Recent Developments

## CHAPTER 14 THERMOSET POLYURETHANES

- Introduction
- Polyurethane Chemistry
- What are Polyurethanes ?
- Polyurethane raw materials and moisture
- Handling of polyurethane components
- Types of polyurethane systems
- Advantages of adduction
- Range and types of polyurethane products
- Polyurethane uses
- Neoprene Lubricant Adhesive #106
- Polyurethane Coatings
- Components for Polyurethanes
- Industrial Mathematics for Polyurethanes
- Terminology
- Guidelines and Theories in Compounding Polyurethane Elastomers
- Compounding for Thermoset Polyurethane Elastomers
- General consideration
- Appendix
- Method for Preparation of MDI Prepolymers

## CHAPTER 15 CROSSLINKED THERMOPLASTICS

- Crosslinking of thermoplastics

Effects of Crosslinking on Polymer  
Chemical Crosslinking  
Rotational molding  
Post irradiation effects  
Acrylates

## CHAPTER 16 MISCELLANEOUS

Nylons (Polyamides)  
Polycarbonate  
Polyethylene terephthalate (Polyester)  
Acrylic multipolymer  
Propylene/vinyl chloride copolymer  
Rubber hydrochloride  
Fluoropolymers  
Polyvinyl Fluoride  
Polyurethane  
Polyimides

## CHAPTER 17 IONOMERS

Properties

## CHAPTER 18 STYRENE POLYMERS AND COPOLYMERS

Polystyrene  
High impact polystyrene  
Expanded polystyrene  
Styrene/acrylonitrile copolymer (SAN)  
Acrylonitrile/Butadiene/Styrene (ABS)

## CHAPTER 19 CELLULOSE AND CELLULOSE DERIVATIVES

Regenerated cellulose  
Substituted Celluloses  
Cellulose nitrate (Celluloid)  
Cellulose acetate  
Cellulose Triacetate  
Cellulose acetate/butyrate (CAB)

## CHAPTER 20 THERMOPLASTIC POLYMERS

Polymerization Concepts  
Polymerization Mechanisms  
Methods of Polymerization

## CHAPTER 21 THERMOSET POLYMERS

Crosslinked Polymers  
Thermoset Polyester  
Polyurethane Elastomers  
Polyimides  
Ladder polymers

## CHAPTER 22 PROCESSING AND FABRICATION

Orientation of molecules and fibers  
Reinforced thermoset processing  
Thermoplastic processing  
Molds

Mixing equipment  
Adhesive Application

## CHAPTER 23 BAG AND SACK MANUFACTURE

Nature of the film  
Bags made from tubular film  
Bags made from Flat Film  
Heavy duty sack manufacture

## CHAPTER 24 THERMOFORMING

Methods of thermoforming  
Vaccum forming  
Skin pachaging  
Pressure forming  
Matched mould forming  
Machine variables  
Heating  
Cooling  
Moulds  
Trimming  
Printing  
Materials and applications  
PVC  
Toughened polystyrene  
Biaxially oriented polystyrene  
ABS  
Low density polyethylene  
High density Polyethylene  
Polypropylene  
Cellulose acetate  
Cellulose acetate/butyrate  
Polycarbonate  
Cold forming

## CHAPTER 25 LAMINATION

Coating  
Predetermined systems  
Reverse roll coaters  
NIP roll coaters  
Gravure coaters  
Calender coating  
Curtain coating  
Extrusion coating  
Adhesive lamination  
Wet bonding  
Dry bonding  
Coextrusion  
Cross laminated film

## About NIIR

**NIIR PROJECT CONSULTANCY SERVICES (NPCS)** is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

Our various services are: Detailed Project Report, Business Plan for Manufacturing Plant, Start-up Ideas, Business Ideas for Entrepreneurs, Start up Business Opportunities, entrepreneurship projects, Successful Business Plan, Industry Trends, Market Research, Manufacturing Process, Machinery, Raw Materials, project report, Cost and Revenue, Pre-feasibility study for Profitable Manufacturing Business, Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Business Opportunities, Investment Opportunities for Most Profitable Business in India, Manufacturing Business Ideas, Preparation of Project Profile, Pre-Investment and Pre-Feasibility Study, Market Research Study, Preparation of Techno-Economic Feasibility Report, Identification and Section of Plant, Process, Equipment, General Guidance, Startup Help, Technical and Commercial Counseling for setting up new industrial project and Most Profitable Small Scale Business.

NPCS also publishes various process technology, technical, reference, self employment and startup books, directory, business and industry database, bankable detailed project report, market research report on various industries, small scale industry and profit making business. Besides being used by manufacturers, industrialists and entrepreneurs, our publications are also used by professionals including project engineers, information services bureau, consultants and project consultancy firms as one of the input in their research.

Our Detailed Project report aims at providing all the critical data required by any entrepreneur vying to venture into Project. While expanding a current business or while venturing into new business, entrepreneurs are often faced with the dilemma of zeroing in on a suitable product/line.
