Aluminium, the second most plentiful metallic element on the earth, became an economic competitor in engineering applications as recently as the end of 19th century. It was become a metal for its time. Aluminium possesses many characteristics that make it highly compatible with recycling. It is resistant to corrosion and it thus retains a high level of metal value after use, exposure, or storage. Once produced, it can be considered a permanent resource for recycling, preferably in to similar products. It is essentially a soft and weak metal which has to be strengthened by alloying with suitable elements. The elements which are added to aluminium are appreciable quantities to increase its strength and improve other properties are surprisingly limited to only four, namely, magnesium, silicon, copper and zinc. These are added singly or in combination. It is theoretically 100% recyclable without any loss of its natural qualities. It is the most widely used non ferrous metal. The applications of aluminium are grown in many fields for example; electric conductors, windows and building components, aircraft, foil packaging etc. It has a major role in packaging industry especially in pharmaceuticals. It includes different types of packaging; unit packaging, bunch wrapping, strip packaging, thermoformed unit packaging and sachets Aluminium alloys with a wide range of properties are used in engineering structures. Aluminium alloys are divided into two major categories; casting compositions and wrought compositions. Further differentiation for each category is based on the primary mechanism. The most commercially mined aluminium ore is bauxite, as it has the highest content of the base metal. The primary aluminium production process consists of three stages. First is mining of bauxite, followed by refining of bauxite to alumina and finally smelting of alumina to aluminium. India has the fifth largest bauxite reserves with deposits 5% of world deposits. Indian share in world aluminium capacity rests at about 3%; it will touch almost 13% to 15% of the growth rate.

This book basically deals with aluminium production, heat treatable and non heat treatable alloys, properties of cast aluminium alloys, testing of liquid & solidification contraction of aluminium alloys, trends in the improving economic use of aluminium, laboratory investigation of carbon anode consumption in the electrolytic production of aluminium, alumina extraction from a pennsylvania diaspore clay by an ammonium sulfate process, the recovery of alumina from its ores by a sulfuric acid process, initial softening in some aluminium base precipitation hardening alloys, basic properties of aluminium foil, how to select a flexible foil packaging laminate, printing on aluminium foil, designing aluminium foil packs etc.

The present book covers the need within the industrial and academic communities for up to date information about production of aluminium and extrusion process due to the ever increasing use of this technology. The book provides concepts in the different areas of extrusion technology. It is hoped that its presentation will be very helpful to new entrepreneurs, technocrats, research scholars, libraries and existing units.

Contents
1. GENERAL INTRODUCTION
Aluminium Production
Production Statistics
Aluminium Alloys
Heat-Treatable and Non-heat-Treatable Alloys
Properties
Manufactured Forms
Standardized products
Engineered Products
Finishes
Mechanical Finishes
Chemical Finishes
Electrolytic Finishes
Non-Electrolytic Coatings
Product Classifications
Building and Construction Applications
Containers and Packaging
Transportation
Electrical Applications
Consumer Durables
Machinery and Equipment
Other Applications

3. PHYSICAL METALLURGY OF ALUMINIUM ALLOYS
Aluminium-Magnesium Alloys
Al-Si alloys
Al-Cu alloys
Hardness Data for Al-3.8% Cu Alloy
Aluminium-zinc alloys
Complex Alloys
Aluminium-Zinc-Magnesium Alloys
Al-Cu-Mg alloys
Al-Mg-Si alloys
Effect of Plastic Deformation on Precipitation
Intermetallic Compounds and their Effects
Corrosion of Aluminium Alloys

4. TESTING OF LIQUID & SOLIDIFICATION CONTRACTION OF ALUMINIUM ALLOYS
1. Derivation of Correlations
2. Experimental procedure
3. Results and Discussion

5. TRENDS IN THE IMPROVING ECONOMIC USE OF ALUMINIUM
1. Reduction in Dimensions and Weight
2. More Efficient Use of Metal
3. Improvements in Methods of Protection
4. New Concepts in Design
   Corrosion Studies Applied to Roofing Sheet and Water Pipes
   Using Structural Aluminium Efficiently
   Aluminium Electrical Conductors
   Overhead Conductors
   Underground Cable
   Transformer Windings
   Development of Welding Techniques and Weldable Alloys
   Welding Processes
   Development of Alloys
   Conclusion

6. LABORATORY INVESTIGATION OF CARBON ANODE CONSUMPTION IN THE ELECTROLYTIC PRODUCTION OF ALUMINIUM
   Introduction
   Materials
   Anode Carbon
   Electrolyte Materials
   Apparatus
   Procedure
   General
   Operation at Different Current Densities
   Operation at Different Temperatures
   Operation at Different Electrolyte Compositions
   Results
   Effect of Anode Current Density
   Effect of Electrolyte Temperature
   Effect of Carbon Baking Temperature
   Effect of Electrolyte Composition
   NaF/AlF3 Ratio
   Alumina Content
   Calcium Fluoride Content
   Sodium Chloride Content
   Graphite and Coke
   Mechanism of Anode Consumption
   Erosion of Particles of Coke from the Active Anode Surface
   Formation of CO

7. ALUMINA EXTRACTION FROM A PENNSYLVANIA DIASPHERE CLAY BY AN AMMONIUM SULFATE PROCESS
   Introduction
   Related Literature
   Raw Material
   Procedure
   Results and Discussion
   Crushing and Grinding
   Mixing and Pelletizing
8. THE RECOVERY OF ALUMINA FROM ITS ORES BY A SULFURIC ACID PROCESS

Introduction
The C.S.I.R.O. Process
Synopsis of Process
Experimental Procedures
Extraction Efficiency
Nature of Ore
Particle Size
Pulp Density and Liquor Concentrations
Temperature
Time
Excess Acidity
Control of Impurities
Silica
Titanium

9. AN IMPROVED ALUMINIUM CONDUCTOR

Electrical Properties of Aluminium
Experimental Work
The PM-2 Conductor
Corrosion Tests
Earthing Tests
Conclusion

10. INITIAL SOFTENING IN SOME ALUMINIUM BASE PRECIPITATION HARDENING ALLOYS

Experimental Procedure
Preparation of Alloys
Heat Treatment
Hardness Measurements
X-ray Diffraction Studies
Results
Discussion
Quenched Hardness
Extent of Softening
Time to Reach Minimum Hardness
Range of Softening
X-ray line width
Conclusion
11. BASIC PROPERTIES OF ALUMINIUM FOIL
Introduction
Production of Aluminium
Manufacture of Aluminium Foil
Metal Purity
Alloying
Annealing
Soft Foil For Flexible Packaging
Safety of Foil For Food Packaging
Strength
Perforations or Pinholes
Foil Costs
Need For Standardization
Future of Foil in Packaging

12. HOW TO SELECT A FLEXIBLE FOIL PACKAGING LAMINATE
Introduction
Materials
Physical Properties of Foil
Physical Properties of Paper
Physical Properties of Films
Cellulose Film
Polyamide (Nylon)
Polyester (Terylene)
Polythene
Polypropylene
PVDC
Note
Laminating Processes
Wax
Hot Melts
Pastes
Polythene
Lacquers
Characteristics of Laminates
Physical Characteristics
Economic Characteristics
Briefing The Supplier
Typical Foil Laminates
For Sweets and Chocolates
For Cakes and Biscuits
For Dairy Trades
For Toiletries
13. DESIGNING ALUMINIUM FOIL PACKS
Introduction
Package Design Factors
Co-ordination of Design Policy
The Corporate Image
Packaging for Export
Aspects of Designing with Aluminium Foil
Methods of Rendering

14. PRINTING ON ALUMINIUM FOIL
The Printing Processes Used
1. Gavure
2. Letterpress
3. Flexography
4. Offset Lithography
5. Silk Screen
Special Requirements for Printing Aluminium Foil
Advantages and Limitations of the Printing Processes Used
Technical Considerations
Gravure
Flexography
Letterpress
Offset Lithography
Silk Screen
Economic Considerations
Other Printing Processes
Web Offset Lithography
Electrostatic Printing

15. HEAT SEALING FOIL PACKS
Importance of Heat-sealing
Principles of Heat-sealing
Sealing Coated Aluminium Foils by Heat
Determination of Optimum Heat-seal Conditions
Factors Controlling the Heat-seal Strength
Failure by Peeling
Paper/Foil Laminates
Types of Thermoplastic Coatings
Sealing Temperatures of Typical Foil Laminates

16. AUTOMATIC PACKAGING IN FOIL

17. LIQUID PACKAGING IN ALUMINIUM FOIL
Introduction
Marketing and Economic Considerations
1. Economics
2. Convenience
3. Presentation
Types of Foil Pack that are Formed, Filled and Sealed from the Reel
Sachets
Two-cavity Sachets
Production of Sachets
Rectangular and Tetrahedral Packs Incorporating Aluminium Foil
For Milk and Cream
For Fruit Juice
Gusseted Bottom Packs
Other Liquids And Semi-liquids
The Value of Foil In Sealable Laminates
What of the Future?

18. ALUMINIUM FOIL IN PHARMACEUTICAL PACKAGING
Introduction
Aluminium Foil as a Cap Liner Facing for Rigid Containers
Unit Packaging
Bunch Wrapping
Strip Packaging
Thermoformed Unit Packaging
Sachets

19. STERILIZABLE ALUMINIUM FOIL FOOD PACKS
Introduction
Reasons for Using a Processable Pouch
Laminate Structure
Pinhole Damage in Foil
Sterilizing Techniques
Filling and Sealing Pouches
Pouch Integrity
Microbiological Aspects
Storage Testing and Heat Penetration
The Commercial Situation
Summing-up

20. BENEFICIATION OF BAUXITE
Experimental Procedure and Results
Evaluation of the Economics of Bauxite Beneficiation
A Proposed Scheme for Beneficiation by Dry Screening

21. ALUMINIUM IN ENGINEERING
Transport Industry
Air
Road
Rail
Marine
Automobile Ancillaries
Airconditioning and Refrigeration
Bearings
Electrical Machinery
Construction Industry
Mining Industry
Other Applications

22. ALUMINIUM DIE CASTINGS IN AUTOMOBILES
Automotive Applications
Recent Trends for Bigger Automotive Castings
Aluminium Die Castings in Indian Automobile
Conclusion

23. NON-FUSION JOINING OF ALUMINIUM
Soldering
Joint Design
Soldering Methods
Friction Soldering
Flux Soldering
Organic Flux Soldering
Chloride Fluxes
Reaction Soldering
Selection of Solders
Soft Soldering
Hard Solders
Brazing
Joint Types
Performance of Joints
Typical Applications
Cold Pressure Welding
Pressure Welding Technique
Butt Welding
Lap Welding
Applications
Ultrasonic Joining
Explosive Joining

24. SELECTIVE ABSORPTION OF FLUORINE FROM THE GASES FROM ALUMINIUM REDUCTION CELLS WITH VERTICAL SPIKE SODERBERG ANODES
Introduction
Theoretical Analysis
General Principles of Selective Absorption of Hydrogen Fluoride
A Continuous Process Based on Controlled Addition of Alkali
General Description
Absorption of Hydrogen fluoride
Absorption of Sulfur Dioxide
Process Working with Pure Water as Absorbent
General Considerations
Absorption of Hydrogen Fluoride
Absorption of Sulfur Dioxide
Pilot Plant Investigations
General
Process with Controlled Alkali Addition
Process Using Pure Water
Comparison of the Two Processes
Further Development of the Pure Water Process
General Considerations
A New Type of Gas Washer, Combining a very High Absorption Efficiency for Hydrogen Fluoride with Complete Selectivity and a High Dust Removal Efficiency
Results of Technical Scale Operation

25. THE FLUORINE PROBLEM IN
ALUMINIUM PLANTS
About NIIR

NIIR PROJECT CONSULTANCY SERVICES (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

NPCS also publishes varies process technology, technical, reference, self employment and startup books, directory, business and industry database, bankable detailed project report, market research report on various industries, small scale industry and profit making business. Besides being used by manufacturers, industrialists and entrepreneurs, our publications are also used by professionals including project engineers, information services bureau, consultants and project consultancy firms as one of the input in their research.
