AN ISO 9001 : 2015 CERTIFIED COMPANY

Author: NPCS Board of Consultants & Engineers
Format: paperback
Code: NI205
Pages: 584
Price: Rs 1,625 | US$ 42.95
Publisher: NIIR PROJECT CONSULTANCY SERVICES
Shipping: 5 days

About the Book

Glass is an amorphous solid usually formed by the solidification of a melt without crystallisation. It is an inorganic product of melting, which has been cooled to rigid state without crystallization. Melting is in fact the sole large scale industrial method of glass making. Glass is being used worldwide and has various applications. They are typically brittle and optically transparent. It is widely used in buildings and having industrial applications. The presence of glasses in our everyday environment is so common that we rarely notice their existence. Glass, as a substance, plays an essential role in science and industry. There are various methods of glass making other than melting for example condensation of vapours, conversion of crystals to an amorphous form using mechanical means or irradiation with fast neutrons, dehydration and sintering of gels, etc. Silica (the chemical compound SiO2) is a common fundamental constituent of glass. The properties of glass can be varied and regulated over an extensive range by modifying the composition, production techniques, or both. In any glass, the mechanical, chemical, optical, and thermal properties cannot occur separately. Instead, any glass represents a combination of properties, and in selecting an individual glass for a product, it is this combination that is important. As an architectural element, glass has become the quite essential product for your home or building. The applications of glass are limited only by your imagination; glass has many applications both internal and external that play a vital role in the function and design of your project. Industrially produced glasses can be divided into groups according to various criteria: composition, appearance, properties, application, method of forming etc. According to their chemical composition glasses are classified as silica glass (quartz glass), water (soluble) glass or sodium silicate glass, crystal glass, heat resistant glass, low alkali glass etc. Glass is finding ever wider applications in modern technology; sealing glasses which have been in use for many years, serve in vacuum tight joining of glass to metal, especially in vacuum electronics, in nuclear technology (protection from radiation, immobilization of radioactive waste by fusion into a chemically, resistant glass, etc.), in agriculture (as carrier of fertilizers with long term effects) and a number of possible application in electronics and many more.
Some of the fundamentals of the book are structure of glass, structure of special melts and glasses, composition of glass, glass formation, crystallization and liquid, optical properties, theoretical strength of glasses, practical strengths of glasses, flaw sources and removal, viscosity of glass forming melts, theoretical principles of glass melting, chemical reactions occurring in glass melting, dissolution of solids in the melt, flow of glass in melting furnaces, physical chemical factors in sol gel processing, deposition of transparent non crystalline, metal oxide coatings by the sol gel process etc.
The present book covers different important parameters of glass technology. The book is comprehensive guide for researchers, technologists, new entrepreneurs and professionals.

Contents

1. GLASS
Definition and Historical Summary
Structure of Glass
Structure of Special Melts and Glasses
Composition of Glass
Glass Formation, Crystallization and Liquid Immiscibility
Chemical, Mechanical and Physical Properties of Industrially Important Melts and Glasses
Rheological Properties of Glass Melts
Surface Tension
Density
Thermal Expansion
Elastic Properties
Mechanical Strength
Hardness
Thermal Properties
Electrical Properties
Gas Permeability
Chemical Stability and Surface Properties
Optical Properties
Color of Glasses
Production of Glass
Raw Materials
Melting Units
Melting, Fining and Homogenization
Glass Cooling
Heating and Regulating Glass Melts
Refractory Lining of Melting Units
Vapor-Deposited Glasses
Occupational Health
Forming
Hand Forming
Annealing
Secondary of Finishing Operations
Uses
Silica and Silica-like Glass
Flat Glass
Laboratory Glassware
Light-Sensitive Glass
Display Devices
Glass Fibers
Molded Optics
Glasses for Nonlinear Optical Devices
Economic Aspects
2. OPTICAL PROPERTIES
Introduction

Bulk Optical Properties
Refractive Index
Molar and Ionic Refractivities
Dispersion
Ultraviolet Absorption
Visible Absorption
Ligand Field Coloration of Glasses
Amber Glass
Colloidal Metal Colors
Colloidal Semiconductor Colors
Radiation-induced Colors
Solarization
Infrared Absorption
Infrared Absorption by Bound Hydrogen Species
Infrared Absorption by Dissolved Gases
Infrared Cutoffs or the Multiphonon Edge
Other Optical Properties of Glasses
Photosensitive and Photochromic Glasses
Opal Glasses
Faraday Rotation
3. MECHANICAL PROPERTIES
Introduction
Elastic Modulus
Hardness
Fracture Strength
Theoretical Strength of Glasses
Practical Strengths of Glasses
Flaw Sources and Removal
Strengthening of Glass
Statistical Nature of Fracture of Glass
Fatigue of Glasses
Thermal Shock
Annealing of Thermal Stresses
4. VISCOSITY OF GLASSFORMING MELTS
Introduction
Viscosity Definitions and Terminology
Viscoelasticity
Viscosity Measurement Techniques
Rotation Viscometers
Falling Sphere Viscometers
Fiber Elongation Viscometers
Beam-bending Viscometers
Other Viscometers
Temperature Dependence of Viscosity
Fragility of Melts
Free Volume Model for Viscous Flow
Entropy Model for Viscous Flow
Compositional Dependence of Viscosity
Silicate Melts
Borate Melts
Germanate Melts

Halide Melts
Chalcogenide Melts
Effect of Hydroxyl on Melt Viscosities
Effect of Thermal History on Viscosity
Effect of Phase Separation on Viscosity
Effect of Crystallization on Viscosity
5. STRUCTURE OF GLASSES
Glass Formation
Models of Glass Structure
The Structure of Oxide Glasses
Submicrostructural Features of Glasses
Miscibility Gaps in Oxide Systems
General Discussion
6. GLASS TECHNOLOGY
The Characteristics of Glass
Properties of Molten Glasses
Viscosity
Crystallization
Surface Tension
Density
Specific Heat
Thermal Conductivity
Electrical Conductivity
Theoretical Principles of Glass Melting
Chemical Reactions Occurring in Glass Melting
Dissolution of Solids in the Melt
Flow of Glass in Melting Furnaces
Homogenization
Volatilization
Refining and Solubility of Gases
Flat Glass and Tube-forming Processes
The Forming of Glass Fibres
Properties of Glass
Mechanical Properties
Thermal Properties
Optical Properties
Electrical Properties
Chemical Durability
Principle Types of Industrial Glasses
Silica Glass (quartz glass)
Sodium-Silicate Glass (water glass)
Sheet and Container Glass; the System Na2Oâ€“CaOâ€“SiO2
Crystal Glass; the System K2Oâ€“CaOâ€“SiO2 and K2Oâ€“PbOâ€“SiO2
Heat-Resistant Glasses of the System Na2O-B2O3â€“SiO2
Coloured Glasses
Opal Glasses
Optical Glasses
Glass Fibres
Other Types of Oxide Glasses and Products
Chalcogenide Glasses
7. NITRIDATION OF SILICA SOL-GEL THIN FILMS

Introduction
Experimental Methods
Results and Discussion
Film Shrinkage
Refractive Index
SIMS Depth Profiles
Auger Analyses
Enhancing the Nitridation Reaction with a Chlorine Pretreatment
8. MODIFICATION OF OXIDES BY POLYMERIZATION PROCESS
Introduction
Introduction of Chemical-Structural Variations in Inorganic Polymers
Theoretical Bases
Experimental
Effect on Properties
Effect on Densification and Viscosity
Effect on Crystallization and Crystalline Transformations
9. DRYING AND FIRING MONOLITHIC SILICA SHAPES FROM SOL-GELS
Introduction
Experimental Technique
Results and Discussion
10. SOL-GEL-DERIVED INDIUM-TIN-OXIDE COATINGS
Introduction
Properties of Sol-Gel Derived ITO Coatings
Characteristic Properties of ITO-Coatings for Window-Systems Derived from Dip Coating
Optical Properties
Architectural Properties
Mechanical Properties
Chemical Properties
Long-Term Stability, Weatherability, Outdoor Tests
Properties of an Insulating Glass Unit (One Pane ITO-Coated)
11. RELATIONSHIPS BETWEEN THE SOL-TO-GEL AND GEL-TO-GLASS CONVERSIONS
Introduction
Gelation
Gel-to-Glass Conversion
Experimental
Results & Discussion
Physical Properties
Shrinkage and Densification
Isothermal Shrinkage Experiments
12. MONOLITHIC XERO-AND AEROGELS FOR GEL-GLASS PROCESSES
Introduction
Main Steps in Gel Processing
Cracking During the Drying Process

Analysis of Causes of Cracking
Effect of Capillary Forces
Concept of Moisture Stress
Mechanical Resistance of the Gel
Ways of Avoiding Cracking During Drying
Monolithic Aerogels
Conclusion
13. BEHAVIOR OF MONOLITHIC SILICA AEROGELS AT TEMPERATURES ABOVE 1000ÂºC
Introduction
Densification of the Gel
Experimental Procedure
Results and Discussion
Conclusion
14. TIO2 COATED GLASS BEADS
Introduction
Experimental
Materials
Instrumentation
Preparation of Catalysts
Hydrogenation Experiments
Results and Discussion
Features of Glass Beads Coated with TiO2
Catalytic Activity of Pd Dispersions on TiO2 Coated Glass Supports
15. DEPOSITION OF TRANSPARENT NON-CRYSTALLINE METAL OXIDE COATINGS BY THE SOL-GEL PROCESS
Introduction
Dip-Coating Technique
Single-Layer Coatings with Refractive Index Gradient
Experimental Work
Results and Discussion
SiO2-B2O3-Na2O System
SiO2-BaO System
16. PHYSICAL CHEMICAL FACTORS IN SOL-GEL PROCESSING
Introduction
Gel Synthesis
Principles of Gelation
Silica Gel
TiO2 Gels
SiO2-B2O3 Gels
SiO2-TiO2 Gels
Na2O-SiO2 Gels
Drying
The Gel-Glass Conversion
Conclusions

Planning a unit? NPCS project reports:

- Glass Fiber project report

NIIR PROJECT CONSULTANCY SERVICES (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

Our various services are: Detailed Project Report, Business Plan for Manufacturing Plant, Start-up Ideas, Business Ideas for Entrepreneurs, Market Research, Manufacturing Process, Machinery, Raw Materials, Project Feasibility, Investment Opportunities, Technical Consultancy and Startup Help.

NPCS also publishes process technology books, technical books, startup books, directory, business database, detailed project reports and market research reports.

Our Detailed Project Report aims at providing all the critical data required by entrepreneurs for starting new business ventures.

NIIR PROJECT CONSULTANCY SERVICES
106-E, Kamla Nagar, New Delhi-110007, India
