

The Complete Book on Glass Technology

Author: NPCS Board of Consultants & Engineers

Format: Paperback

ISBN: 8178330172

Code: NI205

Pages: 584

Price: Rs. 1,625.00 **US\$** 150.00

Publisher: Asia Pacific Business Press Inc.

Usually ships within **5** days

Glass is an amorphous solid usually formed by the solidification of a melt without crystallisation. It is an inorganic product of melting, which has been cooled to rigid state without crystallization. Melting is in fact the sole large scale industrial method of glass making. Glass is being used worldwide and has various applications. They are typically brittle and optically transparent. It is widely used in buildings and having industrial applications. The presence of glasses in our everyday environment is so common that we rarely notice their existence. Glass, as a substance, plays an essential role in science and industry. There are various methods of glass making other than melting for example condensation of vapours, conversion of crystals to an amorphous form using mechanical means or irradiation with fast neutrons, dehydration and sintering of gels, etc. Silica (the chemical compound SiO_2) is a common fundamental constituent of glass. The properties of glass can be varied and regulated over an extensive range by modifying the composition, production techniques, or both. In any glass, the mechanical, chemical, optical, and thermal properties cannot occur separately. Instead, any glass represents a combination of properties, and in selecting an individual glass for a product, it is this combination that is important. As an architectural element, glass has become the quite essential product for your home or building. The applications of glass are limited only by your imagination; glass has many applications both internal and external that play a vital role in the function and design of your project. Industrially produced glasses can be divided into groups according to various criteria: composition, appearance, properties, application, method of forming etc. According to their chemical composition glasses are classified as silica glass (quartz glass), water (soluble) glass or sodium silicate glass, crystal glass, heat resistant glass, low alkali glass etc. Glass is finding ever wider applications in modern technology; sealing glasses which have been in use for many years, serve in vacuum tight joining of glass to metal, especially in vacuum electronics, in nuclear technology (protection from radiation, immobilization of radioactive waste by fusion into a chemically, resistant glass, etc.), in agriculture (as carrier of fertilizers with long term effects) and a number of possible application in electronics and many more. Some of the fundamentals of the book are structure of glass, structure of special melts and glasses, composition of glass, glass formation, crystallization and liquid, optical properties, theoretical strength of glasses, practical strengths of glasses, flaw sources and removal, viscosity of glass forming melts, theoretical principles of glass melting, chemical reactions occurring in glass melting, dissolution of solids in the melt, flow of glass in melting furnaces, physical chemical factors in sol gel processing, deposition of transparent non crystalline, metal oxide coatings by the sol gel process etc. The present book covers different important parameters of glass technology. The book is comprehensive guide for researchers, technologists, new entrepreneurs and professionals.

Contents

1. GLASS

Definition and Historical Summary
Structure of Glass
Structure of Special Melts and Glasses
Composition of Glass
Glass Formation, Crystallization and Liquid
Immiscibility
Chemical, Mechanical and Physical Properties of
Industrially Important Melts and Glasses
Rheological Properties of Glass Melts
Surface Tension
Density
Thermal Expansion
Elastic Properties
Mechanical Strength
Hardness
Thermal Properties
Electrical Properties
Gas Permeability
Chemical Stability and Surface Properties
Optical Properties
Color of Glasses
Production of Glass
Raw Materials
Melting Units
Melting, Fining and Homogenization
Glass Cooling
Heating and Regulating Glass Melts
Refractory Lining of Melting Units
Vapor-Deposited Glasses
Occupational Health
Forming
Hand Forming
Annealing
Secondary of Finishing Operations
Uses
Silica and Silica-like Glass
Flat Glass
Laboratory Glassware
Light-Sensitive Glass
Display Devices
Glass Fibers
Molded Optics
Glasses for Nonlinear Optical Devices
Economic Aspects
2. OPTICAL PROPERTIES
Introduction
Bulk Optical Properties
Refractive Index
Molar and Ionic Refractivities
Dispersion
Ultraviolet Absorption
Visible Absorption
Ligand Field Coloration of Glasses

Amber Glass
Colloidal Metal Colors
Colloidal Semiconductor Colors
Radiation-induced Colors
Solarization
Infrared Absorption
Infrared Absorption by Bound Hydrogen Species
Infrared Absorption by Dissolved Gases
Infrared Cutoffs or the Multiphonon Edge
Other Optical Properties of Glasses
Photosensitive and Photochromic Glasses
Opal Glasses
Faraday Rotation

3. MECHANICAL PROPERTIES

Introduction
Elastic Modulus
Hardness
Fracture Strength
Theoretical Strength of Glasses
Practical Strengths of Glasses
Flaw Sources and Removal
Strengthening of Glass
Statistical Nature of Fracture of Glass
Fatigue of Glasses
Thermal Shock
Annealing of Thermal Stresses

4. VISCOSITY OF GLASSFORMING MELTS

Introduction
Viscosity Definitions and Terminology
Viscoelasticity
Viscosity Measurement Techniques
Rotation Viscometers
Falling Sphere Viscometers
Fiber Elongation Viscometers
Beam-bending Viscometers
Other Viscometers
Temperature Dependence of Viscosity
Fragility of Melts
Free Volume Model for Viscous Flow
Entropy Model for Viscous Flow
Compositional Dependence of Viscosity
Silicate Melts
Borate Melts
Germanate Melts
Halide Melts
Chalcogenide Melts
Effect of Hydroxyl on Melt Viscosities
Effect of Thermal History on Viscosity
Effect of Phase Separation on Viscosity
Effect of Crystallization on Viscosity

5. STRUCTURE OF GLASSES

Glass Formation
Models of Glass Structure

The Structure of Oxide Glasses
 Submicrostructural Features of Glasses
 Miscibility Gaps in Oxide Systems
 General Discussion
 6. GLASS TECHNOLOGY
 The Characteristics of Glass
 Properties of Molten Glasses
 Viscosity
 Crystallization
 Surface Tension
 Density
 Specific Heat
 Thermal Conductivity
 Electrical Conductivity
 Theoretical Principles of Glass Melting
 Chemical Reactions Occurring in Glass Melting
 Dissolution of Solids in the Melt
 Flow of Glass in Melting Furnaces
 Homogenization
 Volatilization
 Refining and Solubility of Gases
 Flat Glass and Tube-forming Processes
 The Forming of Glass Fibres
 Properties of Glass
 Mechanical Properties
 Thermal Properties
 Optical Properties
 Electrical Properties
 Chemical Durability
 Principle Types of Industrial Glasses
 Silica Glass (quartz glass)
 Sodium-Silicate Glass (water glass)
 Sheet and Container Glass; the System $\text{Na}_2\text{O}-\text{CaO}-\text{SiO}_2$
 Crystal Glass; the System $\text{K}_2\text{O}-\text{CaO}-\text{SiO}_2$ and $\text{K}_2\text{O}-\text{PbO}-\text{SiO}_2$
 Heat-Resistant Glasses of the System $\text{Na}_2\text{O}-\text{B}_2\text{O}_3-\text{SiO}_2$
 Coloured Glasses
 Opal Glasses
 Optical Glasses
 Glass Fibres
 Other Types of Oxide Glasses and Products
 Chalcogenide Glasses
 7. NITRIDATION OF SILICA SOL-GEL THIN FILMS
 Introduction
 Experimental Methods
 Results and Discussion
 Film Shrinkage
 Refractive Index
 SIMS Depth Profiles
 Auger Analyses
 Enhancing the Nitridation Reaction with a Chlorine
 Pretreatment
 8. MODIFICATION OF OXIDES BY POLYMERIZATION
 PROCESS

Introduction
 Introduction of Chemical-Structural Variations in
 Inorganic Polymers
 Theoretical Bases
 Experimental
 Effect on Properties
 Effect on Densification and Viscosity
 Effect on Crystallization and Crystalline Transformations
 9. DRYING AND FIRING MONOLITHIC SILICA
 SHAPES FROM SOL-GELS
 Introduction
 Experimental Technique
 Results and Discussion
 10. SOL-GEL-DERIVED INDIUM-TIN-OXIDE COATINGS
 Introduction
 Properties of Sol-Gel Derived ITO Coatings
 Characteristic Properties of ITO-Coatings for Window-
 Systems Derived from Dip Coating
 Optical Properties
 Architectural Properties
 Mechanical Properties
 Chemical Properties
 Long-Term Stability, Weatherability, Outdoor Tests
 Properties of an Insulating Glass Unit (One Pane ITO-
 Coated)
 11. RELATIONSHIPS BETWEEN THE SOL-TO-GEL AND
 GEL-TO-GLASS CONVERSIONS
 Introduction
 Gelation
 Gel-to-Glass Conversion
 Experimental
 Results & Discussion
 Physical Properties
 Shrinkage and Densification
 Isothermal Shrinkage Experiments
 12. MONOLITHIC XERO-AND AEROGELS FOR
 GEL-GLASS PROCESSES
 Introduction
 Main Steps in Gel Processing
 Cracking During the Drying Process
 Analysis of Causes of Cracking
 Effect of Capillary Forces
 Concept of Moisture Stress
 Mechanical Resistance of the Gel
 Ways of Avoiding Cracking During Drying
 Monolithic Aerogels
 Conclusion
 13. BEHAVIOR OF MONOLITHIC SILICA AEROGELS
 AT TEMPERATURES ABOVE 1000°C
 Introduction
 Densification of the Gel
 Experimental Procedure
 Results and Discussion

Conclusion

14. TiO₂ COATED GLASS BEADS

Introduction

Experimental

Materials

Instrumentation

Preparation of Catalysts

Hydrogenation Experiments

Results and Discussion

Features of Glass Beads Coated with TiO₂

Catalytic Activity of Pd Dispersions on TiO₂ Coated

Glass Supports

15. DEPOSITION OF TRANSPARENT NON-CRYSTALLINE METAL OXIDE COATINGS BY THE SOL-GEL PROCESS

Introduction

Dip-Coating Technique

Single-Layer Coatings with Refractive Index Gradient

Experimental Work

Results and Discussion

SiO₂-B₂O₃-Na₂O System

SiO₂-BaO System

16. PHYSICAL CHEMICAL FACTORS IN SOL-GEL PROCESSING

Introduction

Gel Synthesis

Principles of Gelation

Silica Gel

TiO₂ Gels

SiO₂-B₂O₃ Gels

SiO₂-TiO₂ Gels

Na₂O-SiO₂ Gels

Drying

The Gel-Glass Conversion

Conclusions

About NIIR

NIIR PROJECT CONSULTANCY SERVICES (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

Our various services are: Detailed Project Report, Business Plan for Manufacturing Plant, Start-up Ideas, Business Ideas for Entrepreneurs, Start up Business Opportunities, entrepreneurship projects, Successful Business Plan, Industry Trends, Market Research, Manufacturing Process, Machinery, Raw Materials, project report, Cost and Revenue, Pre-feasibility study for Profitable Manufacturing Business, Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Business Opportunities, Investment Opportunities for Most Profitable Business in India, Manufacturing Business Ideas, Preparation of Project Profile, Pre-Investment and Pre-Feasibility Study, Market Research Study, Preparation of Techno-Economic Feasibility Report, Identification and Section of Plant, Process, Equipment, General Guidance, Startup Help, Technical and Commercial Counseling for setting up new industrial project and Most Profitable Small Scale Business.

NPCS also publishes various process technology, technical, reference, self employment and startup books, directory, business and industry database, bankable detailed project report, market research report on various industries, small scale industry and profit making business. Besides being used by manufacturers, industrialists and entrepreneurs, our publications are also used by professionals including project engineers, information services bureau, consultants and project consultancy firms as one of the input in their research.

Our Detailed Project report aims at providing all the critical data required by any entrepreneur vying to venture into Project. While expanding a current business or while venturing into new business, entrepreneurs are often faced with the dilemma of zeroing in on a suitable product/line.

NIIR PROJECT CONSULTANCY SERVICES , 106-E, Kamla Nagar, New Delhi-110007, India. **Email:** npcs.india@gmail.com **Website:** NIIR.org
