Surface Coating Technology Handbook

Author: NPCS Board of Consultants & Engineers
Format: Paperback
ISBN: 9788178331188
Code: NI216
Pages: 680
Price: Rs. 1,475.00  US$ 125.00
Publisher: Asia Pacific Business Press Inc.
Usually ships within 5 days

Surface Coating is in use since long back is rapidly increasing with the development of civilization. There has been considerable impact in this field. Surface coating technology specializes in finding out engineering solutions to all the critical production problems related to coating the products on a continuous and consistent basis in your production plant. Surface coating can be defined as a process in which a substance is applied to other materials to change the surface properties, such as colour, gloss, resistance to wear or chemical attack, or permeability, without changing the bulk properties. Production of surface coating by any method depends primarily on two factors: the cohesion between the film forming substances and the adhesion between the film and the substrate. The development of science and technology revolutionized the surface coating industry in the progressive countries of the world. Surface coating technology involves the use of various types of products such as resins, oils, pigments, polymers, varnishes, plasticizers, emulsions, etc. We have completely replaced costly petroleum solvents with water and we get cheaper finished products with no evaporation loss and fire hazards. Paint is any liquid, liquefiable, or mastic composition which after application to a substrate in a thin layer is converted to an opaque solid film. It is most commonly used to protect, colour or provide texture to objects. The paint industry volume in India has been growing at 15% per annum for quite some years now. Varnish is one of the important parts of surface coating industry. They are used to change the surface gloss, making the surface more matte or higher gloss, or to provide the various areas of a painting with a more unified finish. Plasticizer plays an important role in the formation of polyvinylchloride (PVC). It is also used to plasticize the polymers. Polymers are divided into three different types; linear polymers, branched polymers and cross linked polymers. Polymer Energy system is an award winning, innovative, proprietary process to convert waste plastics into renewable energy. On the basis of value added, Indian share of plastic products industry is about 0.5% of national GDP.

This book basically deals with principles of film formation, evaporation of solvent from a solution, chemistry and properties of drying and other oils, glyceride structure and film formation, the size of polymer molecules, processing of oil and resin, inorganic pigments, classification by chemical constitution, azo pigments, organic pigments in architectural (decorative), organic pigments in industrial finishes, solvent requirements of specific resins convertible systems, molecular structure of polymer plasticiser systems, properties of plasticised polymers, surface active agents, optical properties, rheological characteristics, emulsions and other aqueous media, formation of polymer emulsions, modern methods of analysis etc.

The book presents a concise, but through an overview of state of technology for surface coating. This is organized into different chapters like principal of film formation, chemistry and properties of drying and other oils, processing of oil and resin, organic pigment, solvents, plasticizer, surface active agent, surface preparations etc. This book is an invaluable resource to technocrats; new entrepreneurs, research scholars and others concerned to this field.

Contents
1. PRINCIPLES OF FILM FORMATION
Cohesive and Adhesive Forces
1. Mechanical Forces
2. Molecular Forces
Evaporation of Solvent from a Solution
1. Typical Materials
2. Properties of Materials
3. Effects of Evaporation
Evaporation of One of the Phases of an Emulsion
Evaporation of Solvent Plus Polymerisation
1. Oxygen Induced Mechanisms
2. Heat Induced Polymerisations
3. Use of Water as a Curing Agent
4. Systems Using Catalysts
Systems Employing Substantial Amounts of Curing Agents
Systems Employing the Solvent as a Film Former
2. CHEMISTRY AND PROPERTIES OF DRYING AND OTHER OILS
Vegetable Oils
1. Origin
2. Production of Oils
3. Composition of Crude Oils
4. Refining
Fatty Acids
1. Saturated Acids
2. Monoethenoid Acids
3. Polyethenoid Acids
4. Substituted Acids
Glyceride Structure and Film Formation
1. Fatty Acid Composition
2. Fatty Acid Distribution
Chemical Reactions of Glycerides
1. Ester Reactions
Industrial Applications of Ester Reactions
1. Synthetic Oils
2. Fat Splitting
3. Alcoholysis
Reactions Associated with Unsaturation
1. Oxidation
2. Polymerisation
3. Isomerisation
4. Hydrogenation
5. Reaction with Sulphur
6. Reaction with Maleic Anhydride
Specific Reactions
1. Castor Oil Reactions
2. Dehydrated Castor Oil
Film Properties
1. Oily Media
2. Varnish Media
3. Alkyd Media
Synthetic Drying Oils
1. Hydrocarbon Drying Oils
2. Fatty Acid Condensation Products
3. CHEMISTRY OF RESIN FORMATION AND ITS PROPERTIES

Introduction
Fundamentals of Polymer Formation
1. Functions or Reactive Groups
2. Classification of Polymers
Formation of Polymers
1. Condensation Reactions
2. Addition Polymerisation
Types of Polymers
1. Polyesters
2. Polyamides
3. Phenolic Resins
4. Amino Resins
5. Epoxide Resins
6. Vinyl Polymers
7. Acrylic Polymers
8. Silicones
The Size of Polymer Molecules
1. Estimation of Molecular Weight
2. Measurement of Mn
3. Measurement of Mw
4. Viscosity Relationship
Physical Properties of Polymers
1. Factors Affecting Tensile Strength
2. Cohesive Energy
3. Influence of Molecular Order
4. Intermolecular Attraction
5. Crystallinity
6. Achievement of Flexibility
Chemical Properties of Polymers
1. Effect of Molecular Weight on Solubility
2. Effect of Polymer Structure
Selection and Design of Polymers
1. Addition-Condensation Polymers
2. Designing for Water Solubility
3. Use of Inorganic Ingredients
4. Advent of Truly Synthetic Polymers
4. PROCESSING OF OIL AND RESIN
General Requirements for Processing Equipment
Materials of Construction
Design of Reaction Kettles
1. The Kettle Body
2. Branches and Connections
3. Stirring Equipment
Fume Disposal and Scrubbing
1. Disposal Systems for General Use
2. Water Scrubbing of Anhydride Vapours
3. Packed Scrubbers
Condensing and Refluxing
1. Condensers for P.F., V.F. and M.F. Resins

NIIR Project Consultancy Services (NPCS) 3/12
2. Condensers for Alkyd and Polyester Type Resins
Ancillary Equipment
1. Thinning and Blending Tanks
2. Instruments
3. Vacuum Equipment
4. Valves and Fittings
5. Inert Gas Pipes
6. Pressure and Flow Indication
7. Fume Extraction
8. Lagging
9. Miscellaneous
Heating and Cooling
1. Criteria for Selection of Heating and Cooling Systems
2. Heating of Low Temperature Products
3. Heating at Higher Temperatures
4. Fluid Heat Transmission
5. Heating by Electricity
6. Heating of Pipework and Ancillaries
5. INORGANIC PIGMENTS
Introduction
Origins of Pigments
1. Comparison of Natural and Synthetic Pigments
2. Problems in Producing Natural Pigments
3. Pigment Classification
Pigmentary Properties
1. Particle Size and Particle Size Distribution
2. Particle Shape
3. Colour
4. Refractive Index
Chemical Engineering Processes of Manufacture
1. Precipitation
2. Vapour Phase Oxidation
3. Heterogeneous Surface Reaction (Corrodibility and Corrosion)
4. Solid Phase at Elevated Temperature
Important Groups of Pigments
1. Titanium Dioxide Group
2. Lead Group
3. Zinc Group
4. Antimony Group
5. Lead Chrome Group
6. Chrome Green Group
7. Iron Oxide Group
8. Iron Blue Group
9. Ultramarine Group
10. Cadmium Yellow and Red Group
6. ORGANIC PIGMENTS
Important Properties of Organic Pigments
1. Light Fastness
2. Fastness to Solvents
3. Heat Fastness
4. Chemical Fastness
Types of Organic Pigments
1. General Classification
2. Classification by Chemical Constitution
   Azo Pigments
   1. Monoazo Pigments
   2. Disazo Pigments
   Non-azo Pigments
   1. Miscellaneous Products
   2. Phthalocyanine Pigments
   3. Vat Pigments
   4. Miscellaneous Heterocyclic Compounds
Factors Governing Choice of Organic Pigments
1. Hiding Power
2. Dispersion
3. Stability of Pigmented Systems
Organic Pigments in Architectural (Decorative) Finishes
1. Solvent-Based Paints
2. Water-Based Paints
Organic Pigments in Industrial Finishes
1. Air-Drying Industrial Finishes
2. Finishes Drying by Solvent Evaporation
3. Heat-Cured Industrial Finishes
4. Chemically Cured Finishes
7. EXTENDERS
Introduction
1. Production and Manufacture
2. Opacity
3. Chemical Constitution and Composition
Oxides
Silicas
Hydroxides
Alumina
Carbonates
1. Calcium Carbonate
2. Magnesium Carbonate
3. Calcium-Magnesium Carbonate
4. Barium Carbonate
Silicates
1. Aluminium Silicates
2. Calcium Silicates
3. Magnesium Silicates
4. Asbestos
Silicates
1. Aluminium Silicates
2. Calcium Silicates
3. Magnesium Silicates
4. Asbestos
Sulphates
1. Barium Sulphate
2. Calcium Sulphate
8. SOLVENTS
Introduction
Characteristics of Solvent Groups
1. The Terpenes
2. Hydrocarbon Solvents
3. Ketones
4. Esters
5. Glycol Monoethers
6. Ethers
7. Alcohols
8. Halogenated Compounds
9. Nitroparaffins

Evaluation and Selection of Solvents
1. Solvency
2. Tolerance for Non-solvents
3. Viscosity of Resin Solutions
4. Drying Time
5. Final Properties of the Film
6. General Conclusions

Solvent Requirements of Specific Resins—Convertible Systems
1. Oil Varnishes
2. Alkyd and Alkyd/Amino Resin Composition
3. Silicones
4. Acrylic Resins
5. Urethanes
6. Phenolic Resins
7. Epoxy Resins
8. Polyester Resins

Solvent Requirements of Specific Resins—Non-Convertible Systems
1. Cellulose Compositions
2. Vinyl Resins
3. Acrylic Resins
4. Shellac and Other Spirit-Soluble Resins
5. Rubber Resins and Derivatives

9. PROPERTIES OF SOLVENTS

10. PLASTICIZERS

Introduction
Molecular Structure of Polymer-Plasticiser Systems
1. Effect of Molecular Size
2. Types of Polymers
3. Identification of Polymer Types

Criteria of Plasticiser Efficiency and Compatibility of Polymers
1. The Second-Order Transition Temperature
2. Tests to Show Whether A Given Polymer System Can Be Plasticised
3. Properties of Concentrated Polymer Solutions
4. Compatibility of Resin and Plasticiser
5. Vapour Pressure of Plasticisers

Properties of Plasticised Polymers
1. Exudation Phenomena and Exudate Composition
2. Migration of Plasticisers
3. Tensile Strength
4. Viscosity of Plasticisers and Its Effects
5. Inflammability

The Chemical Types of Plasticisers
1. Hydrocarbons
2. Esters
3. Epoxidised Vegetable Oils
4. Polyesters
Toxicity of Plasticisers
1. Hydrocarbons
2. Halogenated Hydrocarbons
3. Alcohols
4. Glycols
5. Ketones
6. Esters-organic
7. Esters-Inorganic
11. SURFACE ACTIVE AGENTS
Introduction
Types of Surfactants
1. Anion Active
2. Cation Active
3. Ampholytic
4. Non-ionic
5. Miscellaneous
Properties
1. Compatibilities
2. Chemical Stability
3. Physico-Chemical Characteristics
4. Surface and Interfacial Tension
Suspension, Sedimentation and Flocculation
1. Factors Governing Sedimentation Rate
2. Emulsions
Choice of Surfactant
1. Effect of Chain Length
2. Hydrophile/Lipophile Balance
3. Foaming and Anti Foaming
Pigment Treatment
1. Surfactants as Additives in Grinding and Dispersion
2. Pigment Pretreatment
3. Pigment Flushing
Specific Uses in Paints
1. Oil-Bound Water Paints
2. Emulsion (Polymerised) Paints
3. Adhesion of Paints
4. Rheological Properties
5. Speciality Paints
6. Miscellaneous Allied Applications
12. OPTICAL PROPERTIES
Introduction
1. Factors Affecting the Appearance of Coatings
2. Application of Optical Data
Light Transmission, Absorption and Reflection
Correlation of Light Beam Phenomena
Scattering
Opacity
Types of Transparent Coatings
Methods of Measuring Clarity
Scattering Materials
Effects of Pigment Properties
Reflectance Measurement
Gloss
Gloss Measurement Techniques
Colour
Spectrophotometry
Colorimetry
Alternative Methods of Colour Measurement
Appearance of Coatings
Fluorescence
Fading
Lightfastness Tests
External Influences on Lightfastness
Standards of Lightfastness
13. RHEOLOGICAL CHARACTERISTICS
Introduction
Rheological Behaviour In Liquids
1. Newtonian Flow
2. Non-Newtonian Flow
Theories of Viscosity
Eyring's Theory
Einstein's Equation
Molecular Complications
Relaxation Mechanisms
Rheological Measurements
1. Coaxial Cylinder Viscometer
2. Cone-and-Plate Viscometer
3. Capillary Flow Viscometers
4. Falling Sphere Viscometers
5. Efflux Viscometers
Practical Applications
1. Brushing Properties
2. Sagging and Flow
14. EMULSIONS AND OTHER AQUEOUS MEDIA
Introduction
Emulsion Media
Emulsion Polymerisation
Polymerisation
Copolymerisation
Formation of Polymer Emulsions
Particle Charge in Polymer Emulsions
Surface Coating Emulsions
Polyvinyl Acetate and Its Copolymers
Polystyrene
Butadiene/Methyl Methacrylate Copolymers
Emulsified Resins and Oils
Coacervate Emulsions
Emulsion Paints
Film Formation
Composition and Rheology
Solution Media
Proteins
Synthetic Water-Soluble Polymers
Maleinised Oils
Silicates and Siliconates
Solid Cementitious Binders

15. CORROSION
Corrosion of Metals
Electrochemical Basis of Corrosion
Electronic Permeability of the Oxide Film
Permeability of the Oxide Film to Metal Cations
Electrolytic Resistance of the Solution
Effect of an Applied E.M.F.
Protective Action of Organic Coatings
Permeability of Organic Coatings to Oxygen and Water
Permeability of the Oxide Film to Metal Cations
Resistance Inhibition
Metallic Pigments

16. FILM PROPERTIES AND DEFECTS
Properties
1. Adhesion
2. Hardness
3. Flexibility
4. Film Strength or Cohesion
5. Abrasion Resistance
6. Water Absorption
7. Water Permeability
8. Chemical Resistance
9. Solvent Resistance
10. Heat Resistance
11. Colour Retention
12. Fungus Resistance
13. Durability
Defects
1. Black Spotting
2. Blistering
3. Bloom
4. Blushing
5. Bronzing
6. Chalking
7. Cracking
8. Cratering
9. Flaking
10. Floating and Flooding
11. Gas-Checking and Frosting
12. Orange Peel
13. Ropiness or Ropy Finish
14. Seediness
15. Sheariness
16. Silking
17. Sleepiness
18. Sulphide Staining
19. Sweating
20. Wrinkling or Rivelling

17. SURFACE PREPARATIONS
Metal Surfaces
1. Iron and Steel
2. Aluminium
3. Cadmium
4. Copper and Brass
5. Lead
6. Magnesium
7. Stainless Steels, Nickel and Chromium
8. Tin
9. Zinc
10. Pretreatment Primer for Metallic Surfaces

Wood
1. Characteristic Properties
2. Preparation for Painting
3. Preparation for Varnishing and Lacquering

Plaster and Cement Surfaces
1. Drying and Priming
2. Treatment of Efflorescence
3. Control of Drying Out Process
4. General Principles
5. Asbestos Cement

Masonry and Building Boards
1. Brickwork
2. Stone Masonry
3. Miscellaneous Building Boards

Preparation for Repainting
1. Removing Old Paint
2. Dealing with Contaminated Surfaces
3. Schedules of Painting

18. APPLICATION TECHNIQUES

Introduction
Brush and Roller Application
Use and Maintenance of Brushes
Roller Application—Hand
Roller Application—Machine
Spray Application
Compressed Air
Spray Guns and Accessories
Metering Spray Equipment
Spray Booths
Hot Spraying
Steam Spraying
Petroleum Solvent Spraying
Cold Hydraulic Spraying
Hot Hydraulic Spraying
Electrostatic Spraying
Dip Application
Slipper Dip
Trichloroethylene Dip
Controlled Extraction
Flood Coating
Flow Coating
Curtain Coating
Barrelling and Centrifugal Application
Stoving
Operation of Stoving Ovens
About NIIR

NIIR PROJECT CONSULTANCY SERVICES (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

NPCS also publishes various process technology, technical, reference, self employment and startup books, directory, business and industry database, bankable detailed project report, market research report on various industries, small scale industry and profit making business. Besides being used by manufacturers, industrialists and entrepreneurs, our publications are also used by professionals including project engineers, information services
bureau, consultants and project consultancy firms as one of the input in their research.
