Textile auxiliaries are defined as chemicals of formulated chemical products which enables a processing operation in preparation, dyeing, printing of finishing to be carried out more effectively or which is essential if a given effect is to be obtained. Certain Textile Auxiliaries are also required in order to produce special finishing effects such as wash & wear, water repellence, flame retardancy, aroma finish, anti odour, colour deepening etc. The prime consideration in the choice of Textile materials is the purpose for which they are intended, but colour has been termed the best salesman in the present scenario. The modern tendency is towards an insistence on colour which is fast to light, washing, rubbing, and bleaching; this movement makes a great demand on the science of dyeing. Auxiliaries, dyes and dye intermediates play a vital role in textile processing industries. The manufacture and use of dyes is an important part of modern technology. Because of the variety of materials that must be dyed in a complete spectrum of hues, manufacturer now offer many hundreds of distinctly different dyes. The major uses of dyes are in coloration of textile fibers and paper. The substrates can be grouped into two major classes-hydrophobic and hydrophilic. Hydrophillic substances such as cotton, wool, silk, and paper are readily swollen by water making access of the day to substrate relatively easy. On other hand hydrophobic fibers, synthetic polyesters, acrylics, polyamides and polyolefin fibers are not readily swollen by water hence, higher application temperatures and smaller molecules are generally required. Dye, are classified according to the application method. Some of the examples of dyes are acid dyes, basic or cationic dyes, direct dyes, sulfur dyes, vat dyes, reactive dyes, mordant dyes etc. Colorants and auxiliaries will remain the biggest product segment, while faster gains will be seen in finishing chemicals. World demand for dyes and organic pigments is forecast to increase 3.9 percent per year through 2013, in line with real gains in manufacturing activity. Volume demand will grow 3.5 percent annually. While the textile industry will remain the largest consumer of dyes and organic pigments, faster growth is expected in other markets such as printing inks, paint and coatings, and plastics. Market value will benefit from consumer preferences for environmentally friendly products, which will support consumption of high performance dyes and organic pigments. Some of the fundamentals of the book are antimony and other inorganic compounds, halogenated flame retardants, phosphorous compounds, dyes and dye intermediates, textile fibers, pigment dyeing and printing, dry cleaning agents, dry cleaning detergents, acrylic ester resins, alginic acid, polyvinyl chloride, sodium carboxy methyl cellulose, guar gum, industries using guar gum, gum tragacanth, hydroxyethyl cellulose, polyethylene glycol, industries using polyethylene glycols, etc. The book covers details of antimony and other inorganic compounds, halogenated flame retardants, silicone oils, solvents, dyes and dye intermediates, dry cleaning agents, different types of gums used in textile industries, starch, flame retardants for textile and many more. This is very resourceful book for new entrepreneurs, technologists, research scholars and technical institutions related to textile.
Contents

1. Antimony and Other Inorganic Compounds
   Antimony Compounds
   Boron Compounds
   Alumina Hydrates
   Molybdenum Oxides
   Applications
2. Halogenated Flame Retardants
   Principles of Developing Flame-Retardant Polymers
   Testing
   Polymer Classes
   Additive Flame Retardants
   Reactive Flame Retardants
   Economic Aspects
3. Phosphorous Compounds
   Mechanism of Action of Phosphorus Flame Retardants
   Phosphorus-Based Flame Retardants in Commercial Use
   Health and Safety Factors
   Economic Aspects
4. Urea-Formaldehyde Resins
   Composition Variables
   Melamine
5. Melamine-Formaldehyde Resins
6. High Styrene-butadiene Rubber Resins
7. Chlorinated Biphenyls
8. Chlorinated Paraffins
9. Synthetic Rubber Resin Latexes
   Procedure
10. Silicone Oils
    Procedure
11. Solvents
    TYPES OF VOLATILE SOLVENTS
12. Dyes and Dye Intermediates
    Textile Fibers
    Cotton and Rayon
    Wool and Silk
    Cellulose Acetates
    Polyamides
    Polyester
    Acrylics
    Vinlys
    Polyolefins
    Glass Fibers
    Paper
    THE PROPERTIES OF DYSES
    CLASSIFICATION OF DYSES
    Acid dyes
    Basic or Cationic Dyes
    Direct Dyes
    Sulfur Dyes
Vat Dyes
Reactive Dyes
Disperse Dyes
Mordant Dyes
Azoic Dyes
Oxidation Dyes
Ingrain Dyes
THE APPLICATION OF DYES
Fiber Preparation
Dye Bath Preparation
Dye Application
Finishing
DYEING EQUIPMENT
PRINTING
PIGMENT DYEING AND PRINTING
NONTEXILE USES OF DYES
PRODUCTION AND USES
RAW MATERIALS FOR THE MANUFACTURE OF DYES
DYE INTERMEDIATES
Nitration

About NIIR

NIIR PROJECT CONSULTANCY SERVICES (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

NPCS also publishes varies process technology, technical, reference, self employment and startup books, directory, business and industry database, bankable detailed project report, market research report on various industries, small scale industry and profit making business. Besides being used by manufacturers, industrialists and entrepreneurs, our publications are also used by professionals including project engineers, information services bureau, consultants and project consultancy firms as one of the input in their research.

NIIR PROJECT CONSULTANCY SERVICES, 106-E, Kamla Nagar, New Delhi-110007, India. Email: npcs.india@gmail.com Website: NiIR.org
