Packaging is a means of ensuring the safe delivery of a product to the ultimate consumer in a sound condition at the minimal overall cost. Packaging not only differentiates one brand from another but also, at times, gives a preview of the product being sold. Although it is a subject of recent technological origin, the art of packaging is a sold as the primitative humans. Packaging is the science, art, and technology of enclosing or protecting products for distribution, storage, sale, and use, also refers to the process of design, evaluation, and production of packages and can be described as a coordinated system of preparing goods for transport, warehousing, logistics, sale, and end use. Packaging contains, protects, preserves, transports, informs, and sells. In many countries it is fully integrated into government, business, institutional, industrial, and personal use. The continual technological growth systems have undergone significant changes in recent years. A lot of packaging process has been streamlined to give a more scientific and rational approach. The role of packaging continues from the coordinated system of preparing goods to the end use. It has become a big tool for launching new specific products in different shapes and sizes. The packaging industrial growth has led to greater specialization and sophistication from the point of view of health (in the case of packaged foods and medicines) and environment friendliness of packing material. The demands on the packaging industry are challenging, given the increasing environmental awareness among communities. The packaging industry is growing at the rate of 22 to 25 per cent per annum thus is to play a unique role in preserving the wealth or value created by many industries.

This book describes the techniques and process behind packaging of different specific products which are used in our day to day life. The specific products include cereal, spices, edible oils, drinking water, chocolate and confectionery, fruits and vegetables, marine products and many more. Some of the vital contents of the book are adhesives for packaging industries, factors affecting adhesion, tin plate containers for foods, pharmaceuticals and cosmetics, tin plate usage in packaging, packaging of cereals and cereal products, trends in packaging of spices and spice products, packaging of edible oils, vanaspati and ghee, metal containers for food packaging, packaging aspects of sugar and chocolate confectionery, packaging for irradiated foods, packing of meat & meat products in tin containers etc. This book is an invaluable resource for all its readers, entrepreneurs, scientists, existing industries, technical institution, etc in the field of packaging.
Contents

1. Adhesives for Packaging Industries
   Typical Application in packaging
   Classification
   (a) Loss of water or solvent
   (b) Loss of Heat
   Theories of adhesion
   a. Mechanical Interlocking
   b. Electrostatic Interaction
   c. Diffusion Theory
   d. Absorption Theory
   Factors affecting adhesion
   Spreading
   Roughness
   Porosity
   Diffusion
   Rheology
   Thickness
   Pressure
   Starch
   Degradation Products of Starch
   Comparison between starch and Sodium Silicate
   Polyurethane
   Basic urethane chemistry
   Acrylics
   Casein
   Natural Rubber
   Polyvinyl Acetate
   Polyvinyl Alcohols

2. Tin Plate Containers for Foods, Pharmaceuticals and Cosmetics
   Manufacturing Process
   Can Sealants

3. Tinplate Containers

7. Trends in Packaging of Spices and Spice Products
   Packaging of Ground Spices
   Bulk Packaging and Storage of Whole Spices
   Packaging of Oleoresins and Volatile Oils
   Insect Infestation and Fumigation
   Literature Data on Packaging
   Future Trends

8. Packaging of Edible Oils, Vanaspati and Ghee
   Introduction
   Spoilage Factors
   Distribution Pattern
   Packaging Systems/Types of Pack
   Package Types
   Tinplate Containers
   Glass Bottles
   Semi-Rigid Containers
   HDPE (High Density Polyethylene) Containers
   PET (Polyethylene Terephthalate) Bottles
   PVC (Poly Vinyl Chloride) Bottles

About NIIR

NIIR PROJECT CONSULTANCY SERVICES (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

NPCS also publishes varies process technology, technical, reference, self employment and startup books, directory, business and industry database, bankable detailed project report, market research report on various industries, small scale industry and profit making business. Besides being used by
manufacturers, industrialists and entrepreneurs, our publications are also used by professionals including project engineers, information services bureau, consultants and project consultancy firms as one of the input in their research.

Our Detailed Project report aims at providing all the critical data required by any entrepreneur vying to venture into Project. While expanding a current business or while venturing into new business, entrepreneurs are often faced with the dilemma of zeroing in on a suitable product/line.
