Colour and flavour variation in foods throughout the seasons and the effects of processing and storage often make colour addition commercially advantageous to maintain the colour expected or preferred by the consumer. People associate certain colours with certain flavours, and the colour of food can influence the perceived flavour in anything from candy to wine. For this reason, food manufacturers add these dyes to their products. Sometimes the aim is to simulate a colour that is perceived by the consumer as natural. Food colouring is a substance, liquid or powder, which is added to food or drink to change its colour. Food colouring is used both in commercial food production and in domestic cooking. Due to its safety and general availability, food colouring is also used in a variety of non food applications. Flavourings are focused on altering or enhancing the flavours of natural food product such as meats and vegetables, or creating flavour for food products that do not have the desired flavours such as candies and other snacks. Most types of flavourings are focused on scent and taste. Few commercial products exist to stimulate the trigeminal senses, since these are sharp, astringent, and typically unpleasant flavours. Flavourant is defined as a substance that gives another substance flavour, altering the characteristics of the solute, causing it to become sweet, sour, tangy, etc. Flavours and flavour enhancers will remain the largest segment; while alternative sweeteners grow the fastest. Food additives are substances added to food to preserve flavour or enhance its taste and appearance. Food additives are used during production, processing, treatment, packaging, transportation or storage of food. The present day food industry has grown and flourished due to the liberal use of food additives. These additives have also led to the extensive production and marketing of easy to prepare convenience foods. The natural food colour industry market is growing at 10% to 15% annually. The global flavour industry can be characterized as highly technical, specialized, and innovative. This industry is highly competitive and concentrated, compared to other product categories within the food and beverage market. The global flavours market is predicted to grow at a Compound Annual Growth Rate (CAGR) of 2% per annum. In this twenty first century, mankind has developed a technology to retain the original value of food by adding additives, flavours and colours, which also increase the taste of food. This book basically deals with food colorimetry, synthetic colours used food, manufacture of synthetic organic colours for food, analysis of synthetic food colours, synthetic dyes, aluminium lakes, inorganic pigments, the influence of colour on sensory, perception and food choices etc.

This particular publication will guide to our food technologists, agriculturists and management of planning commission to tackle their problem efficiently. This book is very useful for new entrepreneurs, professionals, research institutions, libraries, for those who want to diversify in the field of food colours, flavours and additives technology.

Contents
1. FOOD COLORIMETRY
- The Determination of Strength
- Colorant Identification
- The Cie Method of Colour Measurement
- Additive Colour Mixing
- The Cie 1964 Supplementary Standard Colorimetric Observer
- Illuminant D65
- The Calculation of Tristimulus Values
- Metamerism
- The Nature of Perceived Colour
- The Quantification of Colour Appearance
- The Quantification of Colour Differences
- The Quantification of Metamerism
- Colour Measuring Instruments

2. SYNTHETIC ORGANIC COLOURS FOR FOOD
- Synthetic Colours used Food
- Manufacture of Synthetic Organic Colours for Food
- Quality Assurance of Food Colours
- Blended Food Colours
- Physical Form of Food Colours
- Lake Colours
- Stability Properties of Food Colours
- Storage of Food Colours
- Solubility of Food Colours
- Applications of Food Colours
- Polymeric Dyes

3. NOVEL SYNTHETIC COLOURS FOR FOOD
- Polydye Concept (Dynapol)
- Solubilising Groups
- Use of Polymeric Colours in Food
- Selection of Polymeric Dyes for Food Coloration

4. ANTHOCYANINS
- Types of Ant Hocyanins
- Occurrence and Distribution
- Structural Transformations
- Stabilisation and Augmentation by Physico-Chemical Effects
- Reactions of Anthocyanins in Model and Food Systems
- Anthocyanins as Food Colours
- Analysis

5. SOME SYNTHETIC CAROTENOIDS AS FOOD COLOURS
- Synthesis
- Properties
- Carotenoids in Fat-based Foods
- Carotenoids in Water-based Foods
- International Legal Status
- Vitamin A Activity

6. MISCELLANEOUS NATURALLY OCCURRING COLOURING MATERIAL FOR FOODSTUFFS
- Melanoidin Pigments
Porphyrin Pigments
Betalaine Pigments
Quininoïd Pigments
Miscellaneous Organic Pigments
Inorganic Pigments of Natural Origin for Food

7. ANALYSIS OF SYNTHETIC FOOD COLOURS
    Synthetic Dyes
    Aluminium Lakes
    Inorganic Pigments

8. THE INFLUENCE OF COLOUR ON SENSORY PERCEPTION AND FOOD CHOICES
    Visual Appearance and Colour in Food Choices
    Qualitative Indications of the Importance of Colour
    Quantitative Indications of the Importance of Colour
    Effect of Colour on Taste Thresholds
    Colour-Flavour Investigations Utilising Quantitative
    Colour Measurement Techniques
    Effect of Colour on Odour
    Effect of Colour on ‘Pleasantness’ of Food

9. NATURAL COLOURS IN FOOD
    Novel Sources of Natural Colourants
    Stability of Natural Colourants in Foods
    Stable Forms of Natural Colourants Found in Vivo
    Stabilised Forms of Natural Colourants

10. FOOD FLAVOURS

11. THE CHARACTER OF ADDITIVES
    Antioxidants
    Emulsifiers
    Some DyEstuff Food Colours in Current use
    Natural or Nature-Identical Food Colours
    Natural or Nature-Identical Colours (Continued)
    Toxicant Substances in Herbs/Spices
    Flavour Components of Herbs and Spices
    Sweeteners
    Nutritive Additives
    Essential Amino Acids
    Flour and Bread Additives

12. SAFETY TESTING

13. THE TOXICANT RISKS OF NATURAL FOOD

DIRECTORY SECTION
Addresses of Food Colour, Additives & Ingredients-Manufacturers/Suppliers

About NIIR
NIIR PROJECT CONSULTANCY SERVICES (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

NPCS also publishes varies process technology, technical, reference, self employment and startup books, directory, business and industry database, bankable detailed project report, market research report on various industries, small scale industry and profit making business. Besides being used by manufacturers, industrialists and entrepreneurs, our publications are also used by professionals including project engineers, information services bureau, consultants and project consultancy firms as one of the input in their research.
