

# Enzymes Biotechnology Handbook

**Author:** NIIR Board of Consultants and Engineers

**Format:** Paperback

**ISBN:** 8178330784

**Code:** NI98

**Pages:** 490

**Price:** Rs. 1,100.00    **US\$** 29.73

**Publisher:** Asia Pacific Business Press Inc.

Usually ships within **5** days

Industrial biotechnology is the practice of using cells to generate industrially useful products. An enzyme is a protein that catalyzes, or speeds up, a chemical reaction. Enzymes are the focal point of biotechnological processes, without them biotechnology as a subject would not exist. The main advantage of enzymes compared to most other catalysts is their stereo, region and chemo selectivity and specificity. Enzymes are responsible for many essential biochemical reactions in micro organisms, plants, animals, and human beings. Biotechnology processes may have potential in energy production, specifically in the substitution of renewable plant biomass for fossil feedstock. This will depend on the development of enzymes able to degrade cellulose in plant biomass and designing methods to recycle or dispose of spent biomass. With time, research, and improved protein engineering methods, many enzymes have been genetically modified to be more effective at the desired temperatures, pH, or under other manufacturing conditions typically inhibitory to enzyme activity (e.g. harsh chemicals), making them more suitable and efficient for industrial or home applications. Enzymes are used in the extraction of natural products, as catalysts in organic chemistry, in clinical analysis, in industrial processes, and so on. The application of enzymes is found in many different fields and it is one of the good sectors to venture. In coming few years it is estimated that world enzyme demand will average annual increases of 6.3 percent.

This book basically deals with principles of industrial enzymology, basis of utilization of soluble and immobilized, enzymes in industrial processes, principles of immobilization of enzymes, enzymes in clinical analysis principles, practical aspects of large-scale protein purification, the applications of enzymes in industry, use of enzymes in the extraction of natural products, data on techniques of enzyme immobilization and bio affinity procedures etc.

In this book you can find all the basic information required on the fundamental aspects of the enzymes, their chemistry, bio chemistry as well as detailed information of their applications a wide variety of industrial processes etc. The book is very useful for research scholars, technocrats, institutional libraries and entrepreneurs who want to enter into the field of manufacturing of enzymes.

## Contents

### 1. LARGE-SCALE EXTRACTION AND PURIFICATION OF ENZYMES AND OTHER PROTEINS

Extraction by Chemical Methods

Alkali

Lysozyme and EDTA

Detergents

Cold Shock

Osmotic Shock

Extraction by Physical Methods

Sonication  
 Freezing and Thawing  
 Solid Shear  
 Grinding or Agitation with Abrasives  
 Liquid Shear  
 Isolation and Purification  
 Nucleic Acid Removal  
 Cetyltrimethyl Ammonium Bromide  
 Streptomycin Sulphate  
 Polyethyleneimine  
 Nuclease Treatment  
 Concentration by Precipitation  
 Ammonium Sulphate  
 Organic Solvents  
 High Molecular Weight Polymers  
 Concentration by Ultrafiltration  
 Concentration by Freeze-Drying  
 Gel Chromatography  
 Ion Exchange Chromatography  
 Ion Exchange Resins  
 Ion Exchange Celluloses  
 Other Ion Exchange Gels  
 Affinity Chromatography  
 Coupling Techniques  
 Non-Specific Adsorbents  
 Hydroxyapatite  
 Celite  
 Hydrophobic Interaction Chromatography  
 High Performance Liquid Chromatography  
 Electrophoretic Techniques  
 Electrophoresis.  
 Isoelectric Focusing  
 Multimembrane Electrodecentration  
 Chromatofocusing  
 Aqueous Two-Phase Separation  
 2. PRINCIPLES OF INDUSTRIAL ENZYMOLOGY: BASIS OF UTILIZATION OF SOLUBLE AND  
 IMMOBILIZED  
 ENZYMES IN INDUSTRIAL PROCESSES  
 Glossary of Symbols  
 Assay of Enzyme Activity  
 Cofactors  
 The Distinctive Features of Enzymes as Catalysts  
 Enzyme Catalysis  
 Enzyme Kinetics  
 The Effect of pH on Enzyme Activity  
 The Effect of Temperature on Enzyme Activity  
 Enzyme Inhibition  
 The Various Types of Enzymic Catalyst  
 A Comparison of Enzymes with Chemical Catalysts  
 A Comparison of Enzymes with Fermentations  
 Immobilized Biocatalysts  
 A Comparison of Immobilized Enzymes and Cells  
 An Assessment of Immobilization Supports and Methods

Characterisation of Immobilized Biocatalysts  
 Co-Immobilized Enzymes  
 Two-Phase Reaction  
 Industrial Enzyme Kinetic  
 Effects on Equilibria  
 Effectiveness Factors  
 Steady - State Kinetics  
 Intrinsic Activity of Enzymes - Modifying Factors  
 Introduction  
 Diffusional Limitations on the Activity of Immobilized Biocatalysts  
 External Diffusional Limitations  
 Internal Diffusional Restrictions  
 Regeneration of Cofactors  
 Biochemical Reactors  
 Introduction  
 The Various Types of Biochemical Reactor  
 Assessment of the Performance of Biochemical Reactors  
 Batch Reactors  
 Continuous Stirred Tank Reactors  
 Plug-flow Column Reactors (or Tubular Reactors)  
 Fluidized Bed Reactors  
 Electrochemical Reactors  
 Ultrafiltration Reactors  
 Enzyme Kinetic in Reactors  
 Inhibition in Enzyme Reactors  
 The Effect of Non-Ideal Flow on Biochemical Reactor Performance  
 Physical Problems in Biochemical Reactor using Immobilized Biocatalysts  
 Abrasion  
 Compression  
 Fouling  
 Microbial Contamination  
 The Stability of Immobilized Biocatalysts  
 Introduction  
 The Stability of Biochemical Reactors Employing Immobilized Enzymes or Immobilized Cells  
 Regeneration of Biocatalyst Activities  
 Constant Productivity with Biocatalyst Reactors  
 Scale-Up  
 Discussion  
**3. PRINCIPLES OF IMMOBILIZATION OF ENZYMES**  
 Classification of Immobilized Enzymes  
 Techniques of Enzyme Immobilization  
 Entrapment  
 Gel Entrapment  
 Fibre Entrapment  
 Micro-encapsulation  
 Carrier Binding  
 Physical Adsorption  
 Ionic Binding Method  
 Chelation or Metal Binding

- Covalent Binding
- Crosslinking
- Immobilized Soluble Enzymes
- Immobilization without Enzyme Derivatization
- Immobilization with Enzyme Derivatization
- Miscellaneous Methods
- Choice of Immobilization Method
- Outline of Properties of Immobilized Enzymes
- Stability
- Kinetic Properties
- Outline of Enzyme Reactors
- Batch Reactors
- Continuous Reactors
- Application and Future Trends
- Analytical Applications
- Enzyme Electrodes
- Automated Analysis
- Therapeutic Applications
- Enzyme Replacement
- Enzyme Therapy
- Industrial Applications
- Future Trends
- 4. ENZYMES IN CLINICAL ANALYSIS - PRINCIPLES
- Measurement of Substrate Concentration with Enzymes
- Principles of Equilibrium Methods
- Principles of Kinetic Methods
- Comparison of Equilibrium and Kinetic Methods
- Common Indicator Species Used in Routine Clinical Analysis
- Nicotinamide Adenine Dinucleotides
- Oxygen and Hydrogen Peroxide
- Measurement of Enzymes
- Principles of Enzyme Assay Using Coupled Enzymes
- Immobilized Enzymes for Measuring Substrate Concentrations
- Immobilized Enzyme Reactor Tubes
- Bioanalytical Probes
- Dry Reagent Chemistry
- Enzyme Immunoassay (ELA)
- Preparation of Enzyme Labels
- Homogeneous EIA
- Heterogeneous EIA
- Choice of Enzyme Label
- Assay in EIA
- Simultaneous Assay of Two Haptens
- The Future
- 5. PRACTICAL ASPECTS OF LARGE-SCALE PROTEIN PURIFICATION
- Enzyme Inactivation
- Containers and Ancillary Equipment
- Glass Vessels
- Metal Vessels
- Plastic Vessels
- Liquid Transfer

- Couplings
- Pumps
- Bacterial Disruption
- Resuspension
- Liquid Shear
- Grinding
- Centrifugation
- Batch Centrifuges
- Continuous Flow Centrifuges
- Disc Type Centrifuge
- Hollow Bowl Centrifuges
- Basket Centrifuges
- Tangential Flow Filtration
- Concentration
- Ultrafiltration
- Stirred Cells
- Thin Channel Systems
- Cartridge Membranes
- Hollow Fibres
- Dialysis
- Chromatography
- 1 Columns
- Gel Chromatography
- Ion Exchange Chromatography
- Affinity Chromatography
- 6. THE APPLICATIONS OF ENZYMES IN INDUSTRY
- Glossary of Terms
- Production of Enzymes
- Use of Enzyme - General Comments
- The Characteristics of Industrial Enzymes
- Sources of Enzymes
- The Isolation, Purification and Formulation of Enzymes
- Legislation on the Use of Enzymes
- Enzyme Manufacturers
- Biochemical Applications
- Use of Enzymes in Analysis
- General
- In Clinical Assays
- Medical Uses of Enzymes
- The Use of Enzymes as Catalysts in Organic Chemistry
- Introduction
- Stereospecificity of Enzymes
- Prochiral Stereospecificity
- Combinations of Stereospecificity
- Multiple-Step Reactions
- Synthesis of Radioactive Compounds
- Restriction Endonucleases
- Biochemical Processing
- Applications of Enzymes in the Food Industry
- Polysaccharide Processing
- Bacterial  $\alpha$ -amylase
- Amyglucosidase (EC 3.2.1.3)
- Maltose Syrups

Glucose Isomerase (EC 53.1.5)  
Inversion of Sucrose  
Sugar Refining  
Raffinase  
α-amylase  
Dextranase (EC3.2.1.11)  
Debranching Enzymes  
Cyclodextrin Glucosyltransferase and Other Amylases  
Cellulase (EC3.2.1.4)  
Ethanol Fermentation  
Brewing  
Baking  
The Dairy Industry  
Lactose Hydrolysis  
Cheese Manufacture  
Coagulation  
Flavour Development  
Other Applications  
Organic Acids  
Amino Acids  
Introduction  
Enzymic Resolution  
Enzymic Production of Amino Acids  
Antioxidant  
Introduction  
Glucose Oxidase (EC 1.1.3.4)  
Protein Processing  
Introduction  
The Plastein Reaction  
Aspartame  
Others  
Flavouring Agents  
Fruit Processing  
Use of Enzymes in the Extraction of Natural Products  
Detoxifying Enzymes  
Enzyme-Based Detergents  
Use of Enzymes as Cleansing Agents  
The Leather Industry  
Textiles  
Paper Manufacture  
Antibiotics  
Penicillin Acylase, (EC 3.5.1.11)  
Cephalosporins  
Miscellaneous uses of Biocatalysts  
Conclusion  
Note in Proff  
Acrylamide  
Propylene Oxide  
Vinyl Chloride  
Biosensors  
Amino Acids  
7. DATA ON TECHNIQUES OF ENZYME IMMOBILIZATION  
AND BIOAFFINITY PROCEDURES

Entrapment  
Gel Entrapment  
Fibre Entrapment  
Microencapsulation  
Phase Separation Method  
Interfacial Polymerization Method  
Liquid Surfactant Membrane Method  
Liquid Drying Method  
Chelation or Metal Binding  
Covalent Binding  
Diazotization  
Amide Bond Formation  
Acid Anhydride Derivatives  
Acylazide Derivatives  
Cyclic Imidocarbonate Derivatives  
Isocyanate and Isothiocyanate Derivatives  
Acyl Chloride Derivatives  
Cyclic Carbonate Derivatives  
Condensing Reagents  
Alkylation and Arylation  
Schiff's Base Formation  
Ugi Reaction  
Amidation Reactions  
Thiol-Disulphide Interchange  
Mercury-Enzyme Interactions  
-Irradiation Induced Coupling  
Matrices for Carrier Binding  
Inorganic Supports  
Controlled Pore Supports  
Other Porous Supports  
Non-porous supports  
Coupling Reactions for Inorganic Supports  
Organic Supports  
Polysaccharides  
Proteins  
Carbon  
Polystyrenes  
Polyacrylates  
Maleic Anhydride Based Copolymers  
Polypeptides  
Vinyl and Allyl Polymers  
Polyamides  
Crosslinking  
Immobilized Cells  
Entrapment  
Physical Adsorption  
Chelation or Metal Binding  
Covalent Binding  
Crosslinking  
Other Immobilized Biologically Active Molecules  
Immunoabsorbents  
Affinity Chromatography Media  
Immobilized Lectins

Immobilized Amino Acids and Peptides  
Immobilized Carbohydrates  
Immobilized Nucleosides, Nucleotides and Nucleic Acids  
Immobilized Antibiotics  
8. ENZYMES IN CLINICAL ANALYSES - DATA  
Substrates Measured Enzymically in Clinical Laboratories  
Enzymes Measured by Coupled Enzyme System in  
Clinical Laboratories  
Immobilized Enzymes for Measuring Substrates  
Enzymes Used in Enzyme Immunoassay (EIA)

## About NIIR

**NIIR PROJECT CONSULTANCY SERVICES (NPCS)** is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

Our various services are: Detailed Project Report, Business Plan for Manufacturing Plant, Start-up Ideas, Business Ideas for Entrepreneurs, Start up Business Opportunities, entrepreneurship projects, Successful Business Plan, Industry Trends, Market Research, Manufacturing Process, Machinery, Raw Materials, project report, Cost and Revenue, Pre-feasibility study for Profitable Manufacturing Business, Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Business Opportunities, Investment Opportunities for Most Profitable Business in India, Manufacturing Business Ideas, Preparation of Project Profile, Pre-Investment and Pre-Feasibility Study, Market Research Study, Preparation of Techno-Economic Feasibility Report, Identification and Section of Plant, Process, Equipment, General Guidance, Startup Help, Technical and Commercial Counseling for setting up new industrial project and Most Profitable Small Scale Business.

NPCS also publishes various process technology, technical, reference, self employment and startup books, directory, business and industry database, bankable detailed project report, market research report on various industries, small scale industry and profit making business. Besides being used by manufacturers, industrialists and entrepreneurs, our publications are also used by professionals including project engineers, information services bureau, consultants and project consultancy firms as one of the input in their research.

Our Detailed Project report aims at providing all the critical data required by any entrepreneur vying to venture into Project. While expanding a current business or while venturing into new business, entrepreneurs are often faced with the dilemma of zeroing in on a suitable product/line.
