

Enzymes Biotechnology Handbook

Author: NIIR Board of Consultants and Engineers

Format: Paperback

ISBN: 8178330784

Code: NI98

Pages: 490

Price: Rs. 1,100.00 US\$ 29.73

Publisher: Asia Pacific Business Press Inc.

Usually ships within **5** days

Industrial biotechnology is the practice of using cells to generate industrially useful products. An enzyme is a protein that catalyzes, or speeds up, a chemical reaction. Enzymes are the focal point of biotechnological processes, without them biotechnology as a subject would not exist. The main advantage of enzymes compared to most other catalysts is their stereo, region and chemo selectivity and specificity. Enzymes are responsible for many essential biochemical reactions in micro organisms, plants, animals, and human beings. Biotechnology processes may have potential in energy production, specifically in the substitution of renewable plant biomass for fossil feedstock. This will depend on the development of enzymes able to degrade cellulose in plant biomass and designing methods to recycle or dispose of spent biomass. With time, research, and improved protein engineering methods, many enzymes have been genetically modified to be more effective at the desired temperatures, pH, or under other manufacturing conditions typically inhibitory to enzyme activity (e.g. harsh chemicals), making them more suitable and efficient for industrial or home applications. Enzymes are used in the extraction of natural products, as catalysts in organic chemistry, in clinical analysis, in industrial processes, and so on. The application of enzymes is found in many different fields and it is one of the good sectors to venture. In coming few years it is estimated that world enzyme demand will average annual increases of 6.3 percent.

This book basically deals with principles of industrial enzymology, basis of utilization of soluble and immobilized, enzymes in industrial processes, principles of immobilization of enzymes, enzymes in clinical analysis principles, practical aspects of large-scale protein purification, the applications of enzymes in industry, use of enzymes in the extraction of natural products, data on techniques of enzyme immobilization and bio affinity procedures etc.

In this book you can find all the basic information required on the fundamental aspects of the enzymes, their chemistry, bio chemistry as well as detailed information of their applications a wide variety of industrial processes etc. The book is very useful for research scholars, technocrats, institutional libraries and entrepreneurs who want to enter into the field of manufacturing of enzymes.

Contents

1. LARGE-SCALE EXTRACTION AND PURIFICATION OF ENZYMES AND OTHER PROTEINS

Extraction by Chemical Methods

Alkali

Lysozyme and EDTA

Detergents

Cold Shock

Osmotic Shock

Extraction by Physical Methods

Sonication
 Freezing and Thawing
 Solid Shear
 Grinding or Agitation with Abrasives
 Liquid Shear
 Isolation and Purification
 Nucleic Acid Removal
 Cetyltrimethyl Ammonium Bromide
 Streptomycin Sulphate
 Polyethyleneimine
 Nuclease Treatment
 Concentration by Precipitation
 Ammonium Sulphate
 Organic Solvents
 High Molecular Weight Polymers
 Concentration by Ultrafiltration
 Concentration by Freeze-Drying
 Gel Chromatography
 Ion Exchange Chromatography
 Ion Exchange Resins
 Ion Exchange Celluloses
 Other Ion Exchange Gels
 Affinity Chromatography
 Coupling Techniques
 Non-Specific Adsorbents
 Hydroxyapatite
 Celite
 Hydrophobic Interaction Chromatography
 High Performance Liquid Chromatography
 Electrophoretic Techniques
 Electrophoresis.
 Isoelectric Focusing
 Multimembrane Electrodecentration
 Chromatofocusing
 Aqueous Two-Phase Separation
2. PRINCIPLES OF INDUSTRIAL ENZYMOLOGY: BASIS OF UTILIZATION OF SOLUBLE AND IMMOBILIZED ENZYMES IN INDUSTRIAL PROCESSES
 Glossary of Symbols
 Assay of Enzyme Activity
 Cofactors
 The Distinctive Features of Enzymes as Catalysts
 Enzyme Catalysis
 Enzyme Kinetics
 The Effect of pH on Enzyme Activity
 The Effect of Temperature on Enzyme Activity
 Enzyme Inhibition
 The Various Types of Enzymic Catalyst
 A Comparison of Enzymes with Chemical Catalysts
 A Comparison of Enzymes with Fermentations
 Immobilized Biocatalysts
 A Comparison of Immobilized Enzymes and Cells
 An Assessment of Immobilization Supports and Methods

Characterisation of Immobilized Biocatalysts
Co-Immobilized Enzymes
Two-Phase Reaction
Industrial Enzyme Kinetic
Effects on Equilibria
Effectiveness Factors
Steady - State Kinetics
Intrinsic Activity of Enzymes - Modifying Factors
Introduction
Diffusional Limitations on the Activity of Immobilized Biocatalysts
External Diffusional Limitations
Internal Diffusional Restrictions
Regeneration of Cofactors
Biochemical Reactors
Introduction
The Various Types of Biochemical Reactor
Assessment of the Performance of Biochemical Reactors
Batch Reactors
Continuous Stirred Tank Reactors
Plug-flow Column Reactors (or Tubular Reactors)
Fluidized Bed Reactors
Electrochemical Reactors
Ultrafiltration Reactors
Enzyme Kinetic in Reactors
Inhibition in Enzyme Reactors
The Effect of Non-Ideal Flow on Biochemical Reactor Performance
Physical Problems in Biochemical Reactor using Immobilized Biocatalysts
Abrasion
Compression
Fouling
Microbial Contamination
The Stability of Immobilized Biocatalysts
Introduction
The Stability of Biochemical Reactors Employing Immobilized Enzymes or Immobilized Cells
Regeneration of Biocatalyst Activities
Constant Productivity with Biocatalyst Reactors
Scale-Up
Discussion
3. PRINCIPLES OF IMMOBILIZATION OF ENZYMES
Classification of Immobilized Enzymes
Techniques of Enzyme Immobilization
Entrapment
Gel Entrapment
Fibre Entrapment
Micro-encapsulation
Carrier Binding
Physical Adsorption
Ionic Binding Method
Chelation or Metal Binding

Covalent Binding
Crosslinking
Immobilized Soluble Enzymes
Immobilization without Enzyme Derivatization
Immobilization with Enzyme Derivatization
Miscellaneous Methods
Choice of Immobilization Method
Outline of Properties of Immobilized Enzymes
Stability
Kinetic Properties
Outline of Enzyme Reactors
Batch Reactors
Continuous Reactors
Application and Future Trends
Analytical Applications
Enzyme Electrodes
Automated Analysis
Therapeutic Applications
Enzyme Replacement
Enzyme Therapy
Industrial Applications
Future Trends

4. ENZYMES IN CLINICAL ANALYSIS - PRINCIPLES
Measurement of Substrate Concentration with Enzymes
Principles of Equilibrium Methods
Principles of Kinetic Methods
Comparison of Equilibrium and Kinetic Methods
Common Indicator Species Used in Routine Clinical Analysis
Nicotinamide Adenine Dinucleotides
Oxygen and Hydrogen Peroxide
Measurement of Enzymes
Principles of Enzyme Assay Using Coupled Enzymes
Immobilized Enzymes for Measuring Substrate Concentrations
Immobilized Enzyme Reactor Tubes
Bioanalytical Probes
Dry Reagent Chemistry
Enzyme Immunoassay (ELA)
Preparation of Enzyme Labels
Homogeneous EIA
Heterogeneous EIA
Choice of Enzyme Label
Assay in EIA
Simultaneous Assay of Two Haptens
The Future

5. PRACTICAL ASPECTS OF LARGE-SCALE PROTEIN PURIFICATION
Enzyme Inactivation
Containers and Ancillary Equipment
Glass Vessels
Metal Vessels
Plastic Vessels
Liquid Transfer

Couplings
Pumps
Bacterial Disruption
Resuspension
Liquid Shear
Grinding
Centrifugation
Batch Centrifuges
Continuous Flow Centrifuges
Disc Type Centrifuge
Hollow Bowl Centrifuges
Basket Centrifuges
Tangential Flow Filtration
Concentration
Ultrafiltration
Stirred Cells
Thin Channel Systems
Cartridge Membranes
Hollow Fibres
Dialysis
Chromatography
1 Columns
Gel Chromatography
Ion Exchange Chromatography
Affinity Chromatography
6. THE APPLICATIONS OF ENZYMES IN INDUSTRY
Glossary of Terms
Production of Enzymes
Use of Enzyme - General Comments
The Characteristics of Industrial Enzymes
Sources of Enzymes
The Isolation, Purification and Formulation of Enzymes
Legislation on the Use of Enzymes
Enzyme Manufacturers
Biochemical Applications
Use of Enzymes in Analysis
General
In Clinical Assays
Medical Uses of Enzymes
The Use of Enzymes as Catalysts in Organic Chemistry
Introduction
Stereospecificity of Enzymes
Prochiral Stereospecificity
Combinations of Stereospecificity
Multiple-Step Reactions
Synthesis of Radioactive Compounds
Restriction Endonucleases
Biochemical Processing
Applications of Enzymes in the Food Industry
Polysaccharide Processing
Bacterial -amylase
Amyglucosidase (EC 3.2.1.3)
Maltose Syrups

Glucose Isomerase (EC 53.1.5)
Inversion of Sucrose
Sugar Refining
Raffinase
α-amylase
Dextranase (EC3.2.1.11)
Debranching Enzymes
Cyclodextrin Glucosyltransferase and Other Amylases
Cellulase (EC3.2.1.4)
Ethanol Fermentation
Brewing
Baking
The Dairy Industry
Lactose Hydrolysis
Cheese Manufacture
Coagulation
Flavour Development
Other Applications
Organic Acids
Amino Acids
Introduction
Enzymic Resolution
Enzymic Production of Amino Acids
Antioxidant
Introduction
Glucose Oxidase (EC 1.1.3.4)
Protein Processing
Introduction
The Plastein Reaction
Aspartame
Others
Flavouring Agents
Fruit Processing
Use of Enzymes in the Extraction of Natural Products
Detoxifying Enzymes
Enzyme-Based Detergents
Use of Enzymes as Cleansing Agents
The Leather Industry
Textiles
Paper Manufacture
Antibiotics
Penicillin Acylase, (EC 3.5.1.11)
Cephalosporins
Miscellaneous uses of Biocatalysts
Conclusion
Note in Proff
Acrylamide
Propylene Oxide
Vinyl Chloride
Biosensors
Amino Acids
**7. DATA ON TECHNIQUES OF ENZYME IMMOBILIZATION
AND BIOAFFINITY PROCEDURES**

Entrapment
Gel Entrapment
Fibre Entrapment
Microencapsulation
Phase Separation Method
Interfacial Polymerization Method
Liquid Surfactant Membrane Method
Liquid Drying Method
Chelation or Metal Binding
Covalent Binding
Diazotization
Amide Bond Formation
Acid Anhydride Derivatives
Acylazide Derivatives
Cyclic Imidocarbonate Derivatives
Isocyanate and Isothiocyanate Derivatives
Acyl Chloride Derivatives
Cyclic Carbonate Derivatives
Condensing Reagents
Alkylation and Arylation
Schiff's Base Formation
Ugi Reaction
Amidination Reactions
Thiol-Disulphide Interchange
Mercury-Enzyme Interactions
-Irradiation Induced Coupling
Matrices for Carrier Binding
Inorganic Supports
Controlled Pore Supports
Other Porous Supports
Non-porous supports
Coupling Reactions for Inorganic Supports
Organic Supports
Polysaccharides
Proteins
Carbon
Polystyrenes
Polyacrylates
Maleic Anhydride Based Copolymers
Polypeptides
Vinyl and Allyl Polymers
Polyamides
Crosslinking
Immobilized Cells
Entrapment
Physical Adsorption
Chelation or Metal Binding
Covalent Binding
Crosslinking
Other Immobilized Biologically Active Molecules
Immunoabsorbents
Affinity Chromatography Media
Immobilized Lectins

Immobilized Amino Acids and Peptides
Immobilized Carbohydrates
Immobilized Nucleosides, Nucleotides and Nucleic Acids
Immobilized Antibiotics
8. ENZYMES IN CLINICAL ANALYSES - DATA
Substrates Measured Enzymically in Clinical Laboratories
Enzymes Measured by Coupled Enzyme System in
Clinical Laboratories
Immobilized Enzymes for Measuring Substrates
Enzymes Used in Enzyme Immunoassay (EIA)

About NIIR

NIIR PROJECT CONSULTANCY SERVICES (NPCS) is a reliable name in the industrial world for offering integrated technical consultancy services. NPCS is manned by engineers, planners, specialists, financial experts, economic analysts and design specialists with extensive experience in the related industries.

Our various services are: Detailed Project Report, Business Plan for Manufacturing Plant, Start-up Ideas, Business Ideas for Entrepreneurs, Start up Business Opportunities, entrepreneurship projects, Successful Business Plan, Industry Trends, Market Research, Manufacturing Process, Machinery, Raw Materials, project report, Cost and Revenue, Pre-feasibility study for Profitable Manufacturing Business, Project Identification, Project Feasibility and Market Study, Identification of Profitable Industrial Project Opportunities, Business Opportunities, Investment Opportunities for Most Profitable Business in India, Manufacturing Business Ideas, Preparation of Project Profile, Pre-Investment and Pre-Feasibility Study, Market Research Study, Preparation of Techno-Economic Feasibility Report, Identification and Section of Plant, Process, Equipment, General Guidance, Startup Help, Technical and Commercial Counseling for setting up new industrial project and Most Profitable Small Scale Business.

NPCS also publishes various process technology, technical, reference, self employment and startup books, directory, business and industry database, bankable detailed project report, market research report on various industries, small scale industry and profit making business. Besides being used by manufacturers, industrialists and entrepreneurs, our publications are also used by professionals including project engineers, information services bureau, consultants and project consultancy firms as one of the input in their research.

Our Detailed Project report aims at providing all the critical data required by any entrepreneur vying to venture into Project. While expanding a current business or while venturing into new business, entrepreneurs are often faced with the dilemma of zeroing in on a suitable product/line.

NIIR PROJECT CONSULTANCY SERVICES , 106-E, Kamla Nagar, New Delhi-110007, India. **Email:** npcs.india@gmail.com **Website:** NIIR.org
